Violation: VERMIN INFESTATION

[HSC 114259.1]

Description/Corrective Action:

The facility still shows signs of a rodent infestation. Not only does the facility have an issue with rodents but cockroaches were evident on the glue traps in the warehouse area. The warehouse area was observed overstocked where one could not walk passed certain areas. Several boxes were observed on the floor due to merchandise falling over. As a result, the facility must work on emptying the warehouse area so that the vermin issue can be alleviated.

General Comments:

Our Department received a complaint (CO# 8535) about someone discovering a rodent near one of the facility's registers. As a result, our Department investigated the issue and did find that the facility is still having an issue controlling the rodent infestation. The invoices from pest control were reviewed and it was noted that the pest control company is still finding several rodents each time that they treat the facility. For example, on April 8th, six rodents were discovered and on April 27th, two rodents were discovered. Pest control is servicing the facility twice a week. In order for the facility to eliminate the rodent issue, the facility must comply with the recommendations that are written on the pest control company's report of sealing all cracks and holes. The facility should not receive anymore inventory until the rodent issue is under control. The warehouse area must be organized to the point where one can easily walk through the area.

A reinspection to ensure the facility has organized the warehouse area and eliminated the rodent issue will take place on May 13, 2016. This reinspection will be free of charge; however, should the facility need any further inspections to reach compliance, the facility will be assessed \$220 per inspection and/or face closure.
