NATIONAL FLOOD INSURANCE PROGRAM

This is an official copy of a portion of the above referenced flood map. It was extracted using F-MIT On-Line. This map does not reflect changes or amendments which may have been made subsequent to the date on the title block. For the latest product information about National Flood Insurance Program flood maps check the FEMA Flood Map Store at www.msc.fema.gov

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations (BFEs)** and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the summary of Stillwater Elevations table in the Flood Insurance Study Report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction, and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures in this jurisdiction.

The **projection** used in the preparation of this map was California State Plane, Zone III. The **horizontal datum** was NAD83, GRS80 spheroid. Differences in datum, spheroid, projection or State Plane zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at <http://www.ngs.noaa.gov> or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, N/NGS12
National Geodetic Survey, SSMC-3, #9202
1315 East-West Highway
Silver Spring, Maryland 20910-3282
(301) 713-3242

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242, or visit their website at <http://www.ngs.noaa.gov/>.

Base map information shown on this FIRM was derived from multiple sources. This information was compiled from the National Geodetic Survey, 2005, Kings County Planning Agency, 2006, and U.S. Geological Survey, 1989. Additional information was photogrammetrically compiled at a scale of 1:12,000 from aerial photography dated 2004.

This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact the **FEMA Map Service Center** at 1-800-358-9616 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and their website at <http://www.msc.fema.gov/>.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call 1-877-FEMA-MAP (1-877-336-2627) or visit the FEMA website at <http://www.fema.gov/>.

LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

- ZONE A** No Base Flood Elevations determined.
- ZONE AE** Base Flood Elevations determined.
- ZONE AH** Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
- ZONE AO** Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- ZONE AR** Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
- ZONE A99** Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
- ZONE V** Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
- ZONE VE** Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

- ZONE X** Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

- ZONE X** Areas determined to be outside the 0.2% annual chance floodplain.
- ZONE D** Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

-  Floodplain boundary
-  Floodway boundary
-  Zone D Boundary
-  CBRS and OPA Boundary
-  Boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.
-  Base Flood Elevation line and value; elevation in feet*
-  Base Flood Elevation value where uniform within zone; elevation in feet*

*Referenced to the North American Vertical Datum of 1988

-  Cross section line
-  Transect line
-  Geographic coordinates referenced to the North American Datum of 1983 (NAD 83), Western Hemisphere
- 1000-meter Universal Transverse Mercator grid values, zone 10
- 5000-foot grid ticks: California State Plane coordinate system, zone III (FIPSZONE 0403), Lambert Conformal Conic Projection
- Bench mark (see explanation in Notes to Users section of this FIRM panel)
- River Mile

MAP REPOSITORIES

Appendix A: Soil Map

Soil Map—Kings County, California
(Sozinho Dairies)

MAP INFORMATION

Original soil survey map sheets were prepared at publication scale. Viewing scale and printing scale, however, may vary from the original. Please rely on the bar scale on each map sheet for proper map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL: <http://websoilsurvey.nrcs.usda.gov>
Coordinate System: UTM Zone 11N

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Kings County, California
Survey Area Data: Version 6, Dec 12, 2007

Date(s) aerial images were photographed: 5/10/1994

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Earthquake Shaking Potential for the Central Coast Region

Counties

Summer, 2003

This map shows the relative intensity of ground shaking and damage in the Central Coast Region from anticipated future earthquakes

Important messages about earthquakes for the Central Coast:

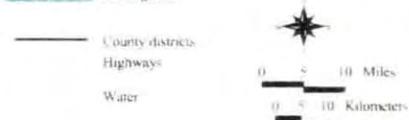

- Earthquakes have produced over \$55 billion in losses in California since 1971. The next large earthquake may produce even greater losses, especially if it affects a major urban area. If the Northridge or Loma Prieta earthquakes had occurred closer to a major population center, fatalities would have been much higher.
- A large earthquake in or near the Central Coast will disrupt the economy of the entire State and much of the nation. Effective disaster planning by State and local agencies, and by private businesses, can dramatically reduce losses and speed recovery. (For information go to www.oes.ca.gov or www.seismic.ca.gov)
- Current building codes will reduce damage but their objective is life safety, not continued operation of the facility.
- After a large earthquake, residents and businesses may be isolated from basic police, fire, and emergency support for a period ranging from several hours to a few days. Citizens must be prepared to survive safely on their own, and to aid others, until outside help arrives. (For information go to www.oes.ca.gov)
- Maps of the shaking intensity after the next major earthquake will be available within minutes on the Internet. The maps available at <http://www.cisn.org/shakemap>, a cooperative effort of DES, CGS, USGS, Caltech and UC Berkeley, will help identify the areas most seriously affected and will guide emergency crews to the most damaged regions.

Level of Earthquake Hazard

These regions are near major, active faults and will on average experience stronger earthquake shaking more frequently. This intense shaking can damage even strong, modern buildings.

These regions are distant from known, active faults and will experience lower levels of shaking less frequently. In most earthquakes, only weaker, masonry buildings would be damaged. However, very infrequent earthquakes could still cause strong shaking here.

Seismic Zone Description

Seismic Zone	Generalized Geologic Formations	Amplification of Shaking
V1 ¹	Moderately thick section of marine and continental sedimentary deposits overlying the granitic basement complex.	Amplification of shaking that would affect low to medium-rise structures is relatively high but the distance to either of the fault systems that are expected sources of the shaking is sufficiently great that the effect should be minimal.
V2 ¹	Moderately thick section of marine and continental sedimentary deposits overlying the granitic basement complex.	Amplification of shaking that would affect low to medium-rise structures is low and the distance to the San Andrea fault zone is moderate. The combined effect is that shaking is expected to be minimal.
V3 ¹	Thick section of marine and continental sedimentary deposits.	Amplification of shaking is reduced by the damping effect of the thick sedimentary section, but the moderate proximity of the San Andrea fault zone results in a moderate increase in expected shaking over that for the east side of the valley.
V4 ¹	Thick section of consolidated sedimentary units overlain by thick unconsolidated alluvial fan deposits.	Amplification of shaking is reduced by the damping effect of the thick sedimentary section, but its moderately close proximity to the San Andrea fault zone results in the expectation of moderately high shaking characteristics.
C1 ²	Thick section of consolidated sedimentary units, with a high frequency of exposure.	Amplification of shaking is low because of the firm nature of the surface in this area. But because of its close proximity to the San Andrea fault zone, the combination results in moderate to high shaking characteristics.
C2 ²	Moderately thick section of marine sedimentary rock unit with a high frequency of exposure throughout the area, with some metamorphics locally, which are of minor importance.	Amplification is low, but the close proximity of the San Andrea fault zone should result in moderate to high shaking characteristics.

Odor Management Plan Monitoring Form

Odor Complaint Register

Rule 4570 VOC, PM10, and NH Mitigation BACT Charts

Dairy Potential BACT Requirements and Mitigation Measures

Emission Unit:		Cow Housing
Pollutant	Control Technology/Mitigation Technique	✓
VOC	Concrete freestall and drylot feed lanes and walkways (required)	✗
	Feed lanes and walkways to be flushed four times a day, scraped four times daily, or vacuumed four times daily (required)	✗
	Weekly scraping and/or manure removal using a pull type manure harvesting equipment, except during periods of rainy weather (required)	✗
	Drylots sloped to facilitate runoff and drying in accordance to Title 3, Food and Agriculture, Division 2, Animal Industry of the California Code of Regulations, Section 646.1 (required)	✗
	Pave feedlane at least 8 feet on the corral side of the fence (required)	✗
	Freestall enclosure with biogas vented to biofilter with 80% control (technologically feasible)	
PM ₁₀	Shade Structures on open corrals (required)	✗
	Weekly scraping and/or manure removal using a pull type manure harvesting equipment in morning hours when moisture in air except during periods of rainy weather (required)	✗
	Use of water and/or soil stabilizers on the dirt corral surfaces, as necessary to maintain optimum moisture content, such that PM and VOC emissions are minimized. A detailed proposal of this system needs to be provided to the District (technologically feasible)	
	Feeding Young Stock (heifers and calves) Near Dusk (required)	✗
	Individual Calve Hutches (Calves under three months) (required)	✗
	Concrete freestall and drylot feed lanes and walkways (required)	✗
	Drylots controlled by windbreaks – Downwind and upwind shelterbelts must meet the USDA National Research Conservation Services (NRCS) Conservation Practice Standard: Windbreaks/Shelterbelt Establishment - Code 380 (technologically feasible)	
NH ₃	Feed lanes and walkways to be flushed four times a day, scraped four times daily, or vacuumed four times a day (required)	✗
	Weekly scraping and/or manure removal using a pull type manure harvesting equipment, except during periods of rainy weather (required)	✗
	Drylots sloped to facilitate runoff and drying in accordance to Title 3, Food and Agriculture, Division 2, Animal Industry of the California Code of Regulations, Section 646.1 (required)	✗
	Pave feedlane at least 8 feet on the corral side of the fence (required)	✗

Emission Unit:		Feed
Pollutant	Control Technology/Mitigation Technique	✓
VOC	Animals fed in accordance with NRC or other District approved guidelines utilizing routine nutritional analysis for rations (required)	X
	Cover or ensile all silage Piles except the face of pile (required)	X
	Collect leachate from the silage piles and send it to a waste treatment system such as a lagoon at least once every twenty-four (24) hours (required)	X
	Uneaten feed should be re-fed or removed daily to minimize emissions from decomposing feed (required)	X
	Silage Face Management (only disturb the required area of face – leave remaining area undisturbed) (required)	X
PM ₁₀	Cover all silage piles (required)	X
	All dry grain to be stored in commodity barns (required)	X
NH ₃	Animals fed in accordance with NRC or other District approved guidelines utilizing routine nutritional analysis for rations (required)	X
	Cover or ensile all silage Piles except the face of the pile (required)	X
	Collect leachate from the silage piles and send it to a waste treatment system such as a lagoon at least once every twenty-four (24) hours (required)	X
	Uneaten feed should be re-fed or removed daily to minimize emissions from decomposing feed (required)	X
	Silage Face Management (only disturb the required area of face – leave remaining area undisturbed) (required)	X

Emission Unit:		Milking Barn	
Pollutant	Control Technology/Mitigation Technique		✓
VOC	Flush/Spray after each batch of milking (required)		X
	Enclosure of milk parlor with biogas vented to biofilter with 80% control (technologically feasible)		
NH ₃	Flush/Spray after each batch of milking (required)		X

Emission Unit:		Land Application of Liquid and Solid Manure	
Pollutant	Control Technology/Mitigation Technique		✓
VOC	Liquid Manure Handling: Irrigation of crops using liquid and slurry manure from a holding / storage pond (required)		X
	Slurry Manure Handling: Liquid injection of manure until the crops become tall enough that damage would occur (optional)		
	Solid Manure Handling: Rapid incorporation of the manure into the soil after land application (required)		X
NH ₃	Liquid Manure Handling: Irrigation of crops using liquid and slurry manure from a holding / storage pond (required)		X
	Slurry Manure Handling: Liquid injection of manure until the crops become tall enough that damage would occur (only applies to slurry)		
PM ₁₀	On-field Crop(s) Activities (required): 1. Minimize passes 2. Practice conservation tillage 3. Restrict field activity during high wind events (>20 mph) 4. Surface roughening of fallow fields 5. Track-out prevention		X

Emission Unit:		Liquid Manure Management	
Pollutant	Control Technology/Mitigation Technique		✓
VOC	Aerobic lagoon (aeration) (technologically feasible)		✗
	Anaerobic digester system with 95% VOC control of captured biogas (IC engine w/catalyst or equivalent) (optional)		
	If not proposing an anaerobic digester, you MUST commit to install one if it is required by the final BACT guideline. If you agree, please check the box		
	Anaerobic Treatment Lagoon designed according to NRCS Guideline (two cell system: Mechanical separator – anaerobic treatment lagoon – Storage Pond – Flush from storage Pond) (required)		
NH ₃	Aerobic lagoon (aeration) (technologically feasible)		✗

Emission Unit:		Mechanical Separators	
Pollutant	Control Technology/Mitigation Technique		✓
VOC	Dewatering press to reduce moisture content of separated solids (dehydrator or screw press or similar) (required)		
	Weekly removal of separated solids (required)		✗
NH ₃	Dewatering press to reduce moisture content of separated solids (dehydrator or screw press or similar) (required)		
	Weekly removal of separated solids (required)		✗

Emission Unit:		Settling basins/Weeping Walls	
Pollutant	Control Technology/Mitigation Technique		✓
VOC	Dry contents in basins within a 2-week period (required)		✗
	Contents must either be directly incorporated into land or spread in thin layers, harrowed and dried (required)		✗
NH ₃	Dry contents in basins within a 2-week period (required)		✗
	Contents must either be directly incorporated into land or spread in thin layers, harrowed and dried (required)		✗

Field Soil Sampling Procedures

Soil Samples:

Materials Needed: Hand or power Auger kit, Rubber Hammer, Screwdriver, wrenches, Bucket, Zip Lock Bags or A&L Laboratories standard 1-lb. Sample bags, Soils Map of the Area, Felt Tip Marker, Chain of Custody Forms, Ice Chest with Ice or “blue ice”.

Sampling Procedure:

1. In the office, use soils map to plan where samples are to be taken. Bring this map with you.
2. Prepare a cooler or ice chest chilled to 4° Celsius and containing ice or “blue ice” coolant.
3. Using soils map, identify locations from which samples will be taken. Take at least one sample from each different type of soil as shown on the soils map.
4. Assemble hand or power auger and prepare other materials. Use rubber hammer and screwdriver to take dirt out of the hand auger.
5. **Semiannual and Annual Sample: 0 ft. to 1 ft. deep.** Dig with hand or power auger until hole is 0 to 1 ft. deep. Use a tape measure to measure the depth of the hole. When it's 6 inches deep, dig another hand auger full or use the sampler in the power auger kit. If using hand auger, put about a pound of this dirt in a zip lock bag or A&L Laboratories standard 1-lb. sample bag. Close the bag. A minimum of **50 grams** is required for the tests. If using power auger, cap the sample tube. Label the bag or sample tube according to labeling procedures (Below). Put sample container into cooler.
6. **Triennial Sample: 0 ft. to 1 ft., 2 ft. to 3 ft., & 4 ft. to 5 ft. deep.** Dig with hand or power auger hole is ½, 2, or 4 ft. deep. Use a tape measure to measure the depth of the hole. When the hole is at the appropriate depth, dig another auger full or use the sampler in the power auger kit. If using hand auger, put about a pound of this dirt in a different zip lock bag or A&L Laboratories standard 1-lb. sample bag from sample one. Close the bag. A minimum of **50 grams** is required for the S2N test. If using power auger, cap the sample tube. Label the bag or sample tube according to labeling procedures (Below). Put sample container into cooler.
7. If samples are to be composited, composite and label them as required.

Labeling:

1. Use a felt tip marker to label the containers.
2. Label each container immediately after sample is taken.
3. Label the containers according to the location number that it is taken from on that ranch.
4. Put the depth that the sample was taken from on the container.
 - The first depth at the first location will be identified as S 1-1
 - The second depth at the first location will be identified as S 1-2
 - The third depth at the second location will be identified as S 2-3
 - And so on.

Testing:

1. Usual testing lab is A & L Western Laboratory in Modesto. Fill out “real” Chain-of-custody forms, not the A&L Soil Sample Information sheet. Chain-of-custody forms are located in the front pocket of the WESTERN DESIGN “Soil Sampling Procedures & Standards” book, or available at A & L Labs. Take samples directly to the testing Laboratory.
2. For the semiannual soil sample, the tests are for **Nitrate – N and Ammonium – N**.
3. For the annual soil test, same as above, and add **Sodium adsorption ratio (SAR), and Exchangeable Sodium Percentage (ESP)**.
4. Triennial soil tests are **S2N, plus Nitrate – N and Ammonium - N**. No fertilizer recommendations on our tests.
5. Arrange to pick up sample tubes, if used, when analyses are complete.
6. Leave lab’s copy of chain of custody at the lab.
7. Keep all Chain-of-custody forms, receipts and records in the customer’s file.
8. Results will be mailed to our office. Make copies of the results and put them in the customer’s file until they are used in whatever report we are doing.

Materials needed for lagoon water nitrogen quick test (3/01)

*420 nm hand-held generic pocket colorimeter (Hach 46777-42) \$340.00

note: The DR890 model colorimeter reads to three decimal places (generic reads to two), is somewhat more accurate in estimating organic-N, is less affected by hot temperatures, has a built in timer and can be useful for many different testing procedures. It costs about \$899

50 cc syringe, 300 gram analytical balance (to 1/10 gram), or really good eyesight for filling dilution bottles (below) with exactly 200 ml deionized or distilled water

250 ml (8 oz) cylindrical plastic bottle with dispensing flip-top dropper lid
(Fisher Scientific phone 800-766-7000 part num. 02-926-1 \$61.67 case of 24 or Consolidated Plastics phone 800-362-1000 order bottles & dropper lids separately: bottles 41688LL \$8.40 per dozen, 24 ml flip top cap 41241LL \$2.64 per dozen

Distilled or deionized water. If dilution bottles are filled ahead of time, additional water will be needed for the test that was drawn at the same time, from the same source, and has been stored and handled the same as the water in the dilution bottle. This is because even distilled/deionized water can contain ammonium, which dissipates during storage. The reagent blank will account for this only if the reagent blank and sample water are identical.

*1000 ml wash bottle (Hach 620-16) \$6.25

*2 clean and dry 10mL size sample cells, 1 inch pathlength. (Hach 24276-06) \$15.50 set of 6

1 ml plastic syringe (without a needle) Long's pharmacy in Ceres, \$0.50 or ask your vet

*Mineral stabilizing agent (Hach 23766-26) \$7.05

*Dispersing agent (Hach 23765-26) \$6.10

*Nessler reagent (Hach 21194-32) \$12.75/bottle

lagoon water in a capped container

(optional) rack for sample cells, holds 24 25mm vials (Hach 24979-03) \$14.00 each

(optional) calculator

timer (2 minutes)

(optional) hand held portable scale

Ohaus SC-4010 400g capacity, 0.1 gm readability, 50-104°F operating temp
\$139.95 or Ohaus HP-320 320 g capacity, 0.2 gm accuracy, 64-77 °F operating temp
\$124.95 www.itinscales.com phone (718) 336-5900

*order from HACH 1-800-227-4224

Materials Needed for Lagoon Water Nitrogen Quick Test
Attachment 2 D

UCCE Stanislaus County

Quick Test Ordering Information

As of 11-12-04

HACH (order online www.hach.com or call 800-227-4224)

- Pocket colorimeter \$305.00 (# 5877-42)
- 1000 ml wash bottle \$6.65 (#620-16)
- Sample cells \$17.85 for 6 (#24476-06)
- Rack for sample cells \$28.00 (#25518-00) **Optional**
- Mineral stabilizing agent \$8.80 (#23765-26)
- Dispersing agent \$7.65 (#2376526)
- Nessler reagent \$15.10 (#21194-32)

Consolidated Plastics (call to place order 800-362-1000 or order online www.consolidatedplastics.com)

- 8 oz plastic bottles \$9.12/dozen (#41688LW)
- 24 ml flip top caps #3.28/dozen (#41241LW)

Itin Scales (call to place order 718-336-5900 or order online www.itinscales.com)

- Ohaus \$114.95 (#SP-401) **Optional**

You will also need a calculator, timer, 1 ml syringe, and a tool box to store your kit.

Quick Test- procedure short list:

In preparation for tests, prepare the testing equipment as:

Label one plastic bottle as “Blank” to use for a control sample for the deionized waster. Use a permanent marker.

Label one glass 25 ml bottle as “Blank”. Use a permanent marker.

If you like, label other bottles as “Sample One, Sample Two”, etc. to help prevent confusion with multiple samples as you are mixing and filling.

Label the “Mineral Stabilizer” solution bottle as #1.

Label the “Polyvinyl Alcohol” solution bottle as #2.

Label the “Nessler Reagent” solution bottle as #3.

Caution- the Nessler Reagent has a pH of 10 which is vary “basic” and will burn your skin and damage your eyes.

Wear eye and hand protection!

- 1 Fill one large plastic bottle to slightly less the 200 ml of deionized water to be used for the “blank” or “control” solution. This solution will determine what “color” is derived from water with “no” manure to set the colorimeter to “Zero”.
- 2 Fill one large plastic bottle for each separate manure sample you will be testing. Normally only one unless you are pumping from several sources or sampling the irrigation water.
- 3 Using a scale, fill all these bottles to 200 ml.
- 4 Add one ml of manure water into one 200ml bottle. None in the “blank”
- 5 Mix the 200 ml bottles and squirt 10 ml from each, including the “blank” into the glass 25 (10) ml bottles.
- 6 Add one drop of solution #1 (mineral stabilizer) to each of the 10 ml bottles including the “blank”.
- 7 Mix by gently turning the bottle upside down and right side up.
- 8 Add one drop of solution #2 (polyvinyl alcohol) to each 10 ml bottle including the “blank”.
- 9 Mix by gently turning the bottle upside down and right side up.
- 10 Clean any finger or other smudges off the bottle. These may deflect the light and give a false reading
- 11 Turn the colorimeter on and “Zero” it with the “blank” 10 ml solution bottle by inserting it into the round receptacle, covering it with the cover to block out all outside light and pressing the blue “zero” button at the left side of the meter.
- 12 Place the 10 ml manure sample into the colorimeter and test it by pressing the green “check” button at the right of the tester. Using the field sample record chart, list this readout into the “(A) Dilute Manure Reading” column.
- 13 Add 0.5 ml of #3 (Nessler Reagent) into each of the 10 ml glass bottles including the “blank”.
- 14 Mix by gently turning the bottle upside down and right side up.
- 15 Allow 2 minutes for the #3 solution to react in the samples and “blank”.
- 16 Clean any finger or other smudges off the bottle. These may deflect the light and give a false reading.

- 17 Place the “blank” again into the colorimeter and test it with the green “check” button at the left of the tester. List this readout into the “(B) Nessler Reagent Blank” column.
- 18 Place the manure sample 10 ml glass bottle the same way but list the readouts into the “(C) Nessler Total Manure” column.

The testing is now complete. Simply “do the math” as listed at the balance to the columns.

Note- if the manure is very dilute, add another 1 ml into the 200 ml bottle which will give double the results. Simply divide the results by 2 to determine the actual parts per million (ppm).

Chemical Name:#2 Diesel Fuel**Cas Number:** 68476-34-6

Synonyms/Common Names: This Material Safety Data Sheet applies to the following product descriptions for Hazard Communication purposes only. Technical specifications vary greatly depending on the product, and are not reflected in this document. Consult specification sheets for technical information.

California Air Resources Board (Carb) Diesel Fuel- On-road, Off-Road, Tax Exempt blends

Premium Diesel Fuel- Low-Sulfur, High-sulfur, On-Road, Off-Road, Tax Exempt blends

#2 Distillate- Low-Sulfur, High-sulfur, On-Road, Off-Road, Tax Exempt blends

#2 Diesel Fuel- Low-Sulfur, High-sulfur, On-Road, Off-Road, Tax Exempt blends

#2 Fuel Oil- Low-Sulfur, High-sulfur, On-Road, Off-Road, Tax Exempt blends

2. Composition, Information On Ingredients

Product Use: This product is intended for use as a fuel in engines and heaters designed for diesel fuels, and for use in engineered processes. Use in other applications may result in higher exposures and require additional controls, such as local exhaust ventilation and personal protective equipment.

Description: #2 Diesel is a complex mixture of hydrocarbons from a variety of chemical processes blended to meet standardized product specifications. Composition varies greatly and includes C9 to C20 hydrocarbons with a boiling range of about 325-675 degrees F. The following is a non-exhaustive list of common components, typical percentage ranges in product, and occupational exposure limits for each.

Component or Material Name	%	CAS Number	ACGIH Limits TLV -- STEL -- Units	OSHA Exposure Limits PEL -- STEL -- C/P -- Units
Cat cracked distillate, light	0-100	64741-59-9	100 -- NA -- mg/m3	N/A -- N/A -- N/A -- N/A
Hydrotreated distillate, middle	0-100	64742-46-7	100 -- NA -- mg/m3	N/A -- N/A -- N/A -- N/A
Hydrotreated distillate, light	0-100	64742-47-8	100 -- NA -- mg/m3	N/A -- N/A -- N/A -- N/A
Gas oil, light	0-100	64741-44-2	100 -- NA -- mg/m3	N/A -- N/A -- N/A -- N/A

3. Hazards Identification**Health Hazard Data:**

1. The major effect of exposure to this product is giddiness, headache, central nervous system depression; possible irritation of eyes, nose, and lungs; and dermal irritation. Signs of kidney and liver damage may be

delayed. Pulmonary irritation secondary to exhalation fo solvent.

2. NIOSH recommends that whole diesel engine exhaust be regarded as a potential occupational carcinogen. Follow OSHA and NSHA rules where diesel engine exhaust fumes may be generated.

3. A life time skin painting study by the American Petroleum Institute has shown that similar naphtha products with a boiling range of 350-700 degrees F usually produce skin tumors and/ or skin cancers in laboratory mice. Only a weak to moderate response occurred. The effect to humans has not been determined.

4. Positive results at 2.0 ml/kg and 6.0 ml/kg noted in mutagenesis studies via in-vivo bone marrow cytogenetics assay in rats.

5. Kerosene is classified as a severe skin irritant. Mutation data has been reported for kerosene products. Hydrotreated kerosene is listed as being probably carcinogenic to humans with limited evidence in humans and sufficient evidence in experimental animals.

Hazards of Combustion Products: Carbon monoxide and carbon dioxide can be found in the combustion products of this product and other forms of hydrocarbon combustion. Carbon monoxide in moderate concentrations can cause symptoms of headache, nausea, vomiting, increased cardiac output, and confusion. Exposure to higher concentrations of carbon monoxide can cause loss of consciousness, heart damage, brain damage, and/or death. Exposure to high concentrations of carbon dioxide can cause simple asphyxiation by displacing available oxygen. Combustion of this and other similar materials should only be carried out in well ventilated areas.

MSDSDefinition of
terms**Material Safety Data Sheet #2 Diesel**

Medical Condition Generally Aggravated By Exposure: Medical conditions which have the same symptoms and effects as those outlined under the health hazard information section can be aggravated by exposure to this product.

Medical Limitation: N/A

Routes Of Exposure

Inhalation: Irritation of the upper respiratory tract and eyes, with possible euphoria, dizziness, headache, discoordination, ringing in the ears, convulsions, coma, and respiratory arrest.

Skin Contact: Defatting of the skin may occur with continued and prolonged contact. Irritation and burning sensation may occur on exposure to the liquid or mists.

Skin Absorption: Not significant.

Eye Contact: Severe burning sensation with temporary irritation and swelling of lids.

Ingestion: Irritation of the mucous membranes of throat, esophagus and stomach which may result in nausea and vomiting; central nervous system depression may occur, if absorbed (see inhalation symptoms above). If aspirated, chemical pneumonitis may occur with potentially fatal results. Possible kidney and liver damage may be delayed. (See Notes to Physician in Section 5)

Carcinogenicity Statement: #2 Diesel is not listed as carcinogenic by NTP, OSHA, and ACGIH. IARC has listed kerosene and light catalytic cracked distillates as a probable human carcinogen. Light paraffinic hydrotreated petroleum distillates are listed as confirmed human carcinogens by IARC.

4. First Aid Measures

Eyes: Immediately flush eyes with large amount of water for at least 15 minutes holding lids apart to ensure flushing of the entire eye surface. **SEEK IMMEDIATE MEDICAL ATTENTION.**

Skin: Wash contaminated areas with plenty of soap and water. A soothing ointment may be applied to irritated skin after thoroughly cleansing. Remove contaminated clothing and footwear. **SEEK IMMEDIATE MEDICAL ATTENTION.**

Inhalation: Get person out of contaminated area to fresh air. If breathing has stopped resuscitate and administer oxygen if readily available. **SEEK MEDICAL ATTENTION IMMEDIATELY.**

INGESTION: Never give anything by mouth to an unconscious person. If swallowed, do not induce vomiting. If vomiting occurs spontaneously, keep airway clear. **SEEK MEDICAL ATTENTION IMMEDIATELY.**

Note to Physician: Do not induce vomiting, use gastric lavage only. Aspiration of liquid into the lungs could result in Chemical pneumonitis. Use of adrenaline is not advised. Treat symptomatically.

MSDSDefinition of
terms**Material Safety Data Sheet for #2 Diesel****5. Fire and Explosion Data**

Flash Point: 100 degrees F PM (minimum)
Autoignition Temperature: 494 degrees F
Flammable Limits In Air: UEL: 5% - LEL: 0.7%

Extinguishing Media: Use dry chemical, carbon dioxide, foam or water spray. Water may be ineffective in fighting fires of liquids with low flash points, but water should be used to keep fire exposed containers cool. If a leak or spill has not ignited, use water spray to disperse the vapors and to protect persons attempting to stop a leak.

Special Fire Fighting Procedures: Pressure-demand, self contained, breathing apparatus should be provided for fire fighters in buildings or confined areas where product is stored.

Unusual Fire And Explosion Hazard: Vapor accumulation is possible, and flashback can occur with explosive force if vapors are ignited.

6. Accidental Release Measures

If material is spilled, steps should be taken to contain liquid and prevent discharges to streams or sewer systems and control or stop the loss of volatile materials to the atmosphere. Spills or releases should be reported, if required to the appropriate local, state and federal regulatory agencies.

Small Spills: Remove ignition sources. Absorb spilled material with non-combustible materials such as cat litter, dirt, sand, or petroleum sorbent pads/pillows. Do not use combustible materials like rags, wood chips, or saw dust. Remove contaminated materials to an appropriate disposal container.

Large Spills: Remove ignition sources. Dike spill area with sand or dirt to contain material and cover sewers/drains. Remain upwind and keep unnecessary people away. Contact trained emergency response team for cleanup. Remove liquid using grounded suction pumps, isolate hazard area and deny entry.

7. Handling and Storage Information

Store only in approved containers. Protect containers against physical damage. Outside or detached storage is preferred. Separate from oxidizing materials. Store in cool, well ventilated area of non-combustible construction away from possible sources of ignition. Keep away from incompatible materials and follow OSHA 29 CFR 1910.106 and NFPA 30 for storage requirements.

Product Use: This product is intended for use as a fuel in engines and heaters designed for kerosene or diesel fuels, and for use in engineered processes. Use in other applications may result in higher exposures and require additional controls, such as local exhaust ventilation and personal protective equipment.

8. Exposure Controls/Personal Protection

Ventilation Requirements: Work in well ventilated areas using good engineering practices to process, transfer and store. Special ventilation is not required unless product is sprayed or heated. High volume use may require engineering controls.

Specific Personal Protective Equipment

Respiratory: Respiratory protection is not required unless product is sprayed or heated. Use NIOSH approved respiratory protection following manufacturer's recommendations where spray, mists, or vapors may be generated. Supplied air respiratory protection is required for IDLH areas. See 29 CFR 1910.134 for OSHA Respirator Protection regulations.

Eye: Face shield and goggles or chemical goggles should be worn where mist or spray may be generated, and

where splashing occurs. Shower and eyewash facilities should be accessible.

Gloves: Impermeable protective gloves such as nitrile gloves should be worn during routine handling of this product. Barrier creams may also be appropriate where tactile sensitivity is required.

Other Clothing and Equipment: Clothing contaminated with this product should be removed and laundered before reuse. Items which can not be laundered should be discarded. Allow contaminated items to air dry or hang in a well ventilated area. Spontaneous combustion or fire may result from contaminated materials being placed together before drying.

Exposure Monitoring

Biological: No applicable procedure, breath analysis for hydrocarbons has been suggested.

Personal/Area: Based on similarity to kerosene, both active and passive monitors employing charcoal adsorption follow by gas chromatography. An average molecular weight of 170 has been suggested as the average value to convert the determined weight of hydrocarbons to ppm. Direct reading colorimetric tubes are available to evaluate short term exposure.

9. Physical and Chemical Properties

Appearance and Odor: Colorless to straw, or red oily liquid with characteristic kerosene-like odor.

Viscosity: Specification dependent, 1.7 - 3.4 cSt @ 140 degrees F

Boiling Range @ 760 mm Hg: 302-644 degrees F

Vapor Density (Air=1): 4.5 (kerosene)

Evaporation Rate (BuAc=1): N/A

Specific Gravity (H2O=1): 0.865

Bulk Density At 60 degrees F: 6.8-7.2 lbs./gal.

Solubility in H2O % by WT.: Insoluble

Freezing Point: -51 degrees F

Vapor Pressure: 0.5 mmHg @ 20 degrees C

% Volatiles By Vol.: N/A

API Gravity: Specification dependent

pH: NA

MSDSDefinition of
terms**Material Safety Data Sheet for #2 Diesel****10. Stability and Reactivity Information**

Conditions Contributing to Instability: Under normal conditions, the material is stable. Avoid sources of ignition such as flames, hot surfaces, sparks, and electrical equipment.

Incompatibility: Avoid contact with strong oxidizers such as chlorine, concentrated oxygen, and sodium hypochlorite or other hypochlorites.

Hazardous Decomposition Products: Thermal decomposition products may include carbon monoxide, carbon dioxide, oxides of sulfur and nitrogen, and other toxic gases

Hazardous Polymerization: Material is not known to polymerize.

11. Toxicological Information

For detailed information, contact MSDS Assistance at (210) 592-4593

12. Ecological Information

For detailed information, contact MSDS Assistance at (210) 592-4593

13. Disposal Considerations

Shipment, storage, disposal, and cleanup actions of waste materials are regulated under local, state and federal rules. Contact the appropriate agencies if uncertain of applicability. Waste product and contaminated material having a flash point below 140 degrees F is considered a hazardous waste. DOT Hazardous Waste Number D001 applies. Consult 40 CFR 262 for EPA disposal requirements.

14. Transport Information

DOT Proper Shipping Name	Combustible Liquid, n.o.s	Diesel Fuel
DOT Hazard Class*	Combustible Liquid	3*
DOT Packing Group (PG)	III	III
I.D. Number	UN 1993	NA 1993
Required Labeling	None	Flammable Liquid

* Since this product has a flash point >100 degrees F and no other hazard class applies, it may be reclassified as Combustible Liquid and NA 1993 substituted for the product specific I.D.

Number above. Consult 49 CFR 173.120 for specific details.

15. Regulatory Information**TSCA (Toxic Substance Control Act) Inventory**

Gasoline is listed in the TSCA inventory.

SARA (Superfund Amendments and Reauthorization Act) TITLE III

This product is reportable under SARA Title III, Sections 311 & 312 as a hazardous substance.

Hazard Categories Applicable under 40 DFR 370.2 (SARA Section 311):

Acute Health	Chronic Health	Pressure	Fire	Reactive
Yes	Yes	No	Yes	No

Components Listed under 40 CFR 372.65 (SARA Section 313):

This product does not contain chemicals identified as toxic by EPA under CFR part 372 and is not subject to the reporting requirements of this section.

State Regulations:

California Proposition 65: This product does not contain chemicals known to the State of California to cause cancer, birth defects, or other reproductive harm.

16. Other Information**NFPA (National Fire Protection Association) Hazard Ratings Codes***

Fire	Health	Reactivity	Other
2	1	0	Blank

*Based on Standard System for the Identification of the Fire Hazards of Materials, NFPA No. 704 M

This material safety data sheet was prepared by T. W. Brown Oil Co., Inc. in accordance with 29 CFR 1910.1200. All information, recommendations and suggestions appearing herein concerning this product are based upon tests and data believed to be reliable, however, it is the user's responsibility to determine the safety, toxicity and suitability for his own use of the product described herein. Since the actual use by others is beyond our control, no guarantee expressed or implied is made by T. W. Brown Oil Co., Inc. as to the effects of such use, the results to be obtained or the safety and toxicity of the product nor does T. W. Brown Oil Co., Inc. assume any liability arising out of use by others of the product referred to herein. Nor is the information herein to be construed as absolutely complete since additional information may be necessary or desirable when particular or exceptional conditions or circumstances exist or because of applicable laws or government regulations.

1. Chemical Product

MSDS Number: U4080

MSDS Date: 01-1-99

Product Name: Gasoline

24 Hour Emergency Phone: (210) 979-8346
Transportation Emergencies: Call Chemtrec at 1-800-424-9300
MSDS Assistance: (210) 592-4593

Distributors Name and Address:

T.W. Brown Oil Co., Inc.
1857 Knoll Drive
Ventura, California 93003

Chemical Name: Gasoline

Cas Number: 8006-61-9

Synonyms/Common Names: This Material Safety Data Sheet applies to the following product descriptions for Hazard Communication purposes only. Technical specifications vary greatly depending on the product, and are not reflected in this document. Consult specification sheets for technical information.

Unleaded Gasoline Blendstocks/Subgrades- all types, grades, octanes, and vapor pressures.

California Air Resources Board (Carb) Gasoline- all grades, octanes, vapor pressures, and oxygenate blends.

Reformulated Gasoline (RFG)-all grades, octanes, vapor pressures, and oxygenate blends.

California Reformulated Gasoline (CARFG)-all grades, octanes, vapor pressures, and oxygenate blends.

Conventional Gasoline-all grades, octanes, vapor pressures, and oxygenate blends.

2. Composition, Information On Ingredients

Product Use: This product is intended for use as a fuel in engines or for use in engineered processes. Use in other applications may result in higher exposures and require additional controls, such as local exhaust ventilation and personal protective equipment.

Description: Reformulated gasoline is a complex mixture of hydrocarbons from a variety of chemical processes blended to meet standardized product specifications. Composition varies greatly and includes C₇ to C₁₂ hydrocarbons with a boiling range of about 80-473 degrees F. The following is a non-exhaustive list of common components, typical percentage ranges in product, and occupational exposure limits for each. Functional and performance additives may also be present at concentrations below reporting thresholds.

Component or Material Name	%	CAS Number	ACGIH Limits TLV -- STEL -- Units	OSHA Exposure Limits PEL -- STEL -- C/P -- Units
Gasoline	90-100	Mixture	300--500--ppm	NA--NA--NA -- ----

Butane	<9	106-97-8	800--NA--ppm	NA--NA--NA -- ----
Pentane	<6	109-66-0	600--750--ppm	1000--NA--NA--ppm
n-Hexane	<4	110-54-3	50--NA--ppm	500--NA--NA--ppm
Hexan(other isomers)	<8	NA	500--1,000--ppm	NA--NA--NA-- ----
Benzene	1.2 - 4.9	7-4-2	0.5--2.5--ppm	1--5--NA--ppm
N-heptane	<2	14-82-5	400--500--ppm	500--NA--NA--ppm
Ethylbenzene	<2	100-41-4	100--125--ppm	100--NA--NA--ppm
Xylene (o,m,p, - isomers)	<11	1330-20-7	100--150--ppm	100--NA--NA--ppm
Cyclohexane	<2	110-82-7	300--NA--ppm	300--NA--NA--ppm
Trimethylbenzene	<4	25551-13-7	25--NA--ppm	NA-NA-NA- ----
Methyl-t-butyl ether (MTBE)	0-15	1634-04-4	40--NA--ppm	NA-NA-NA- ----
Toluene	<12	108-88-3	50-NA-ppm	200-300/500-NA-ppm
Ethyl-t-butyl ether (ETBE)	0-7	637-92-3	N/A-NA-ppm	NA-NA-NA- ----
t-amyl-methyl-ether	0-5	994-05-8	N/A-NA-ppm	NA-NA-NA- ----
Ethanol	0-11	64-17-5	1,000-NA-ppm	1,000-NA-NA-ppm

C=Ceiling concentration not to be exceeded at any time. P= Peak concentration for a single 10 minute exposure per day.

3. Hazards Identification

Health Hazard Data:

1. The major effect of exposure to this product is central nervous system depression and polyneuropathy.
2. Studies have shown that repeated exposure of laboratory animals to high concentrations of whole gasoline vapors at 67,262 and 2056 ppm has caused kidney damage and cancer of the kidney in rats and liver cancer in mice.
3. LARC has listed gasoline as possibly carcinogenic (2B) to humans with limited evidence in humans in the absence of sufficient evidence in experimental animals. NIOSH lists gasoline as a carcinogen with no further classification.
4. N-heptane and cyclohexane cause narcosis and irritation of eyes and mucous membranes. Cyclohexane has been reported to cause liver and kidney changes in rabbits. N-heptane has been reported to cause polyneuritis following prolonged exposure.
5. ACGIH lists benzene a human carcinogen with and assigned TLV of 0.5 ppm 8 hour TWA and a STEL of 2.5 ppm; IARC, NTP & OSHA show sufficient evidence for classifying Benzene as a human carcinogen, see 29 CFR 1910.1028 for current PEL of 1 ppm and specific actions to take. Studies have shown that benzene can induce leukemia at concentrations as low as 1 ppm. Significant elevations of chromosomal aberrations have been corroborated among workers exposed to levels at mean concentrations less than 10 ppm. Based on risk assessment studies by Rinsky, an individual inhaling 1 ppm of benzene for 40 years, the odds of benzene-induced leukemic death were 1.7 times higher than those of unexposed workers.
6. MTBE is a mild irritant to the eye with an LC50 of 85 mg/m³ on 4 hr. exposure and an LD50 ~4 ml/Kg (RATS). An increase in anesthesia with increasing concentration (250,500 & 1000 ppm) was observed during a 90 day Test exposure. ACGIH has listed MTBE as an animal carcinogen (A3) based on tests in experimental animals at relatively high dose levels, by routes of

administration, at sites, of histologic types, or by mechanisms not considered relevant to worker exposure. Available evidence suggests that MTBE is not likely to cause cancer in humans except under uncommon or unlikely routes of levels of exposure.

7. Trimethylbenzene (pseudocumene (1,2,4,) & mesitylene (1,2,5,)) has a PEL and TLV of 25 ppm 8 hr. TWA; the isomers may cause nervousness, tension, and anxiety and asthmatic bronchitis.

8. n-Hexane has been shown to cause polyneuropathy (peripheral nerve damage) after repeated and prolonged exposure, other hexanes show narcotic effects at 1000 ppm and are not metabolized like n-hexane.

9. Toluene can cause impairment of coordination and momentary loss of memory (200-500 ppm); Palpitations, extreme weakness and pronounced loss of coordination (500-1500). The 100 ppm 8 hr. TWA and the 150 ppm STEL provides adequate protection.

10. The toxicological effects of ETBE and TAME have not been thoroughly investigated. ETBE and TAME are expected to be an inhalation hazard and a severe eye and moderate skin irritant.

Hazards of Combustion Products: Carbon monoxide and carbon dioxide can be found in the combustion products of this product and other forms of hydrocarbon combustion. Carbon monoxide in moderate concentrations can cause symptoms of headache, nausea, vomiting, increased cardiac output, and confusion. Exposure to higher concentrations of carbon monoxide can cause loss of consciousness, heart damage, brain damage, and/or death. Exposure to high concentrations of carbon dioxide can cause simple asphyxiation by displacing available oxygen. Combustion of this and other similar materials should only be carried out in well ventilated areas.

Medical Condition Generally Aggravated By Exposure: Medical conditions which have the same symptoms and effects as those outlined under the health hazard information section can be aggravated by exposure to this product.

Medical Limitation: N/A

Routes Of Exposure

Inhalation: Irritation of the upper respiratory tract with central nervous system stimulation possible followed by depression, dizziness, headache, incoordination, anaesthesia, coma, and respiratory arrest. The threshold for immediate mild toxic effects is reported to be 900-1000 ppm.

Skin Contact: Defatting of the skin may occur with continued and prolonged contact. Irritation and burning sensation may occur on exposure to the liquid or high vapor phase exposure..

Skin Absorption: Benzene is absorbed directly through intact skin.

Eye Contact: Contact with liquid will cause severe burning sensation with temporary irritation and swelling of lids. Vapor in concentrations of 160-270 ppm in air will irritate the eye.

Ingestion: Irritation of the mucous membranes of throat, esophagus and stomach which may result in nausea and vomiting; depression may occur, if absorbed (see inhalation symptoms above). If aspirated, chemical pneumonitis may occur with potentially fatal results.

Carcinogenicity Statement: Gasoline mixtures are not listed as carcinogenic by NTP, OSHA, and ACGIH. Gasoline mixtures are listed as a possible carcinogen by IARC (2B) and NIOSH. Benzene is listed as a confirmed human carcinogen by IARC, NTP, OSHA, NIOSH, and ACGIH.

4. First Aid Measures

Eyes: Immediately flush eyes with large amount of water for at least 15 minutes holding lids apart to ensure flushing of the entire eye surface. **SEEK IMMEDIATE MEDICAL ATTENTION.**

Skin: Wash contaminated areas with plenty of soap and water. A soothing ointment may be applied to irritated skin after thoroughly cleansing. Remove contaminated clothing and footwear. **SEEK IMMEDIATE MEDICAL ATTENTION.**

Inhalation: Get person out of contaminated area to fresh air. If breathing has stopped resuscitate and administer oxygen if readily available. **SEEK MEDICAL ATTENTION IMMEDIATELY.**

Ingestion: Never give anything by mouth to an unconscious person. If swallowed, do not induce vomiting. If vomiting occurs spontaneously, keep airway clear. **SEEK MEDICAL ATTENTION IMMEDIATELY.**

Note to Physician: Gastric lavage only if large quantity has been ingested. Guard against aspiration into lungs which may result in chemical pneumonitis. Irregular heart beat may occur, use of adrenaline is not advised. Treat symptomatically.

5. Fire and Explosion Data

Flash Point: <-40 degrees (Estimated)
Autoignition Temperature: 480 degrees F
Flammable Limits In Air: UEL: 7.1% - LEL: 1.3%

Extinguishing Media: Use dry chemical, carbon dioxide, foam or water spray. Water may be ineffective in fighting fires of liquids with low flash points, but water should be used to keep fire exposed containers cool. If a leak or spill has not ignited, use water spray to disperse the vapors and to protect persons attempting to stop a leak.

Special Fire Fighting Procedures: Pressure-demand, self contained, breathing apparatus should be provided for fire fighters engaged in activities in the hot zone.

Unusual Fire And Explosion Hazard: Vapors may travel extended distances and flashback with explosive force if ignition sources are present. Clothing, rags, or similar organic material contaminated with the product and stored in a closed space may undergo spontaneous combustion.

6. Accidental Release Measures

Eliminate all sources of ignition (flames, sparks, heat, electrical equipment, and engines) and remove non-response personnel from the spill area. Contain liquids with earthen dikes or petroleum absorbent materials. Prevent discharges to streams or sewer systems. Control vapors from large spills with fire-fighting foam. Remove liquid with explosion-proof equipment and grounded and bonded suction hoses. Report spills or releases as required to the appropriate local, state and federal regulatory agencies.

7. Handling and Storage Information

This product is intended for use as engine fuel only. Protect containers against physical damage. Outside or detached storage or underground storage is preferred. Separate from oxidizing materials. Store in cool, well ventilated area of non-combustible construction away from possible sources of ignition (flames, sparks, heat, electrical equipment, and engines). Transfer with explosion-proof equipment and grounded and bonded transfer lines. Consult NFPA 30 and OSHA 1910.106 for specific requirements.

8. Exposure Controls/Personal Protection

Ventilation Requirements: Work in well ventilated areas using good engineering practices to process, transfer and store. Explosion-proof equipment is required. Vapor recovery systems may be required in some areas. Mechanical ventilation is required for confined spaces such as tanks and vessels.

Specific Personal Protective Equipment

Respiratory: Respiratory protection is not normally not required when transferring material in well ventilated areas. When transferring in enclosed areas or at high temperatures, vapors concentrations may warrant use of respiratory equipment. Use NIOSH approved respiratory protection following manufacture's recommendations. Positive pressure supplied air respiratory protection is required for IDLH areas; follow ANSI Z88.2

Eye: Face shield and goggles or chemical goggles should be worn where splashing is likely.

Gloves: Impermeable protective gloves such as nitrile gloves should be worn during routine handling of this product.

Other Clothing and Equipment: Standard work clothing is sufficient with good practices. Clothing contaminated with this product should be removed and laundered before reuse. Items which can not be laundered should be discarded. Allow contaminated items to air dry or hang in a well ventilated area. Spontaneous combustion or fire may result from contaminated materials being placed together before drying. Shower and eyewash facilities should be accessible.

Special Work Practices:

- (1) Wear impervious gloves such as nitrile gloves when "dip-sticking storage tanks"
- (2) Work up-wind of small spills during clean-up
- (3) DO NOT USE THIS PRODUCT as a solvent for cleaning equipment or skin
- (4) Store small quantities ONLY in "SAFETY CANS" approved for gasoline storage and labeled

"GASOLINE"

(5) Allow contaminated rags to completely dry in a well ventilated area before storage

Exposure Monitoring

Biological: No applicable procedure, breath analysis for hydrocarbons has been suggested. Below are biological monitoring procedures for certain ingredients:

ANALYTE	DETERMINANT	SAMPLING TIME	BIOLOGICAL EXPOSURE INDEX (BEI)
Benzene	S-phenylmercapturic acid in urine	End of shift	25 ug/g creatinine
Toluene	Hippuric acid in urine	End of shift	1.6 g/g creatinine
	Toluene in venous blood	Prior to last shift of week	0.05 mg/L
n-Hexane	2,5-Hexanedione in urine	End of shift	5 mg/g creatinine
	n-Heane in exhaled air		Semiquantitative
Ethylbenzene	Mandelic acid in urine	End of last shift of week	1.5 g/g creatinine
	Ethylbenzene in exhaled air		Semiquantitative
Xylene	Methylhippuric acid in urine	End of shift	1.5 g/g creatinine

Personal/Area: Both active and passive air monitoring utilizing activated charcoal absorption followed by gas chromatography are recommended. A molecular weight of 72.5 has been suggested as the average value to convert total hydrocarbon results from milligrams per cubic meter to ppm. Direct reading indicating tubes are available to evaluate short term exposure.

9. Physical and Chemical Properties

Appearance and Odor: Clear, pink, or blue tinted liquid with characteristic, pungent odor: odor threshold is 0.25 ppm and is not an index of exposure.

Boiling Range @ 760 mm Hg: 80-437 degrees F

Melting Point: NA

Vapor Density (Air=1): 3.0-4.0

Evaporation Rate (BuAc=1): N/A

Specific Gravity (H₂O=1): 0.68-0.76 @60 degrees F

Bulk Density At 60 degrees F: 5.7-6.3 lbs./gal.

Solubility in H₂O % by WT.: Trace

Reid Vapor Pressure: 6.8-15 PSI

% Volatiles By Vol.: ~100

API Gravity: 50-75

pH: NA

Ron: 89-98

10. Stability and Reactivity Information

Conditions Contributing to Instability: Under normal conditions, the material is stable.

Incompatibility: Avoid contact with oxidizers and sources of ignition.

Hazardous Decomposition Products: Carbon dioxide, carbon monoxide.

Hazardous Polymerization: None

11. Toxicological Information

For detailed information, contact MSDS Assistance at (210) 592-4593

12. Ecological Information

For detailed information, contact MSDS Assistance at (210) 592-4593

13. Disposal Considerations

Shipment, storage, disposal, and cleanup actions of waste materials are regulated under local, state and federal rules. Contact the appropriate agencies if uncertain of applicability. Waste product and contaminated material having a flash point below 140 degrees F is considered a hazardous waste. DOT Hazardous Waste Number D001 applies. Consult 40 CFR 262 for EPA disposal requirements.

14. Transport Information

DOT Proper Shipping Name	Gasoline
DOT Hazard Class*	3
DOT Packing Group (PG)	II
I.D. Number	UN 1203
Required Labeling	Flammable Liquid

15. Regulatory Information

TSCA (Toxic Substance Control Act) Inventory

Gasoline is listed in the TSCA inventory.

SARA (Superfund Amendments and Reauthorization Act) TITLE III

This product is reportable under SARA Title III, Sections 311 & 312 as a hazardous substance.

Hazard Categories Applicable under 40 DFR 370.2 (SARA Section 311):

Acute Health	Chronic Health	Pressure	Fire	Reactive
Yes	Yes	No	Yes	No

Components Listed under 40 CFR 372.2 (SARA Section 311):

This product does not contain chemicals identified as toxic by EPA under CFR part 372 and is not subject to the reporting requirements of this section. The chemicals contained are:

Component	CAS Number	Percentage
n-Hexane	110-54-31	<6
Cyclohexane	142-82-5	<2
Methyl-t-butyl ether	1634-04-4	<15
Benzene	71-43-2	<3.5
Toluene	100-88-3	<13

Ethylbenzene	100-41-4	<2
o-Xylene	95-47-6	<4
m-Xylene	108-38-3	<4
p-Xylene	106-42-3	<4
Xylene (Mixed Isomers)	1330-20-7	Total <12
1,2,4-Trimethylbenzene	95-63-6	<5

State Regulations:

California Proposition 65: This product contains chemicals known to the State of California to cause cancer, birth defects, or other reproductive harm. These chemicals are: Benzene (cancer), toluene (reproductive effects).

DEFINITIONS OF MSDS TERMINOLOGY

Government Agencies and Private Associations

- ACGIH-** American Conference of Governmental Industrial hygienists, (private association)
- DOT-** United States Department of Transportation
- EPA-** United States Environmental Protection Agency
- IARC-** International Agency for Research on Cancer, (private association)
- NFPA-** National Fire Protection Association, (private association)
- MSHA-** Mine Safety and Health Administration, U.S. Department of Labor
- NIOSH-** National Institute of Occupational Safety and Health, U.S. Department of Health and Human Services

NTP- National Toxicology Program, (private association)

OSHA- Occupational Safety and Health Administration, U.S. Department of Labor

Hazard and Exposure Information

Acute Hazard- An adverse health effect which occurs rapidly as a result of short term exposure.

CAS#- American Chemical Societies Chemical Abstract service registry number which identifies the product and/or ingredients.

Ceiling- The concentration that should not be exceeded during any part of the working exposure

Chronic Hazard- An adverse health effect which generally occurs as a result of long term exposure or short term exposure with delayed health effects and is of long duration

Fire Hazard- A material that poses a physical hazard by being flammable, combustible, pyrophoric or an oxidizer as defined by 29 CFR 1910.1200

Hazard Class- DOT hazard classification

IDLH- Immediately Dangerous to Life and Health, the airborne concentration below which a person can escape without respiratory protection and exposure up to 30 minutes, and not suffer debilitation or irreversible health effects. Established by NIOSH.

mg/m³- Milligrams of contaminant per cubic meter of air, a mass to volume ratio

N/A- Not available or no relevant information found

NA- Not applicable

PEL- OSHA permissible exposure limit; an action level of one half this value may be applicable

ppm- Part per million (one volume of vapor or gas in one million volumes of air)

Pressure Hazard- A material that poses a physical hazard due to the potential to become unstable reactive, water reactive or that is an organic peroxide as defined by 29 CFR 1910.1200

STEL- The ACGIH short-term exposure limit, a 15-minute time-weighted average exposure which should not be exceeded at any time during a workday, even if the 8-hour TWA is less than the TLV

8-hour TWA- The time weighted average concentration for a normal 8-hour workday and a 40-hour workweek, to which nearly all workers may be repeatedly exposed, day after day, without adverse effect.

W- Do Not Add Water- water reactive materials may produce toxic gas, extreme heat, or chemical reaction on contact with water

IMPORTANT: Read this MSDS before handling or disposing of this product and pass this information on to employees, customers and users of this product.

Emergency Overview			
Physical State	Liquid.		
Color	Red.	Odor	Mild petroleum odor

WARNING!
Oil injected into the skin from high-pressure leaks in hydraulic systems can cause severe injury.
Most damage occurs during the first few hours.
Seek medical attention immediately.
Surgical removal of oil may be necessary.
Spills may create a slipping hazard.

Protective Equipment
Minimum Recommended See Section 8 for Details

2) Proprietary Ingredients	Proprietary Mixture	1 - 10
3) Distillates, petroleum, solvent-refined heavy paraffinic	64741-88-4	0 - 5
4) Zinc alkylidithiophosphate	68649-42-3	0 - 2

SECTION 3: HAZARDS IDENTIFICATION

Also see Emergency Overview and Hazard Ratings on the top of Page 1 of this MSDS.

Major Route(s) of Entry Skin contact.

Signs and Symptoms of Acute Exposure

Inhalation At elevated temperatures or in enclosed spaces, product mist or vapors may irritate the mucous membranes of the nose, the throat, bronchi, and lungs.

CITGO TRANSGARD® Tractor Hydraulic Fluid, Red

- Eye Contact** This product can cause transient mild eye irritation with short-term contact with liquid sprays or mists.
- Skin Contact** This material can cause mild skin irritation from prolonged or repeated skin contact. Injection under the skin can cause inflammation and swelling. Injection of pressurized hydrocarbons can cause severe, permanent tissue damage. Initial symptoms may be minor. Injection of petroleum hydrocarbons requires immediate medical attention.
- Ingestion** If swallowed, large volumes of material can cause generalized depression, headache, drowsiness, nausea, vomiting and diarrhea. Smaller doses can cause a laxative effect. If aspirated into the lungs, liquid can cause lung damage.
- Chronic Health Effects Summary** Contains a petroleum-based mineral oil. Prolonged or repeated skin contact can cause mild irritation and inflammation characterized by drying, cracking, (dermatitis) or oil acne. Repeated or prolonged inhalation of petroleum-based mineral oil mists at concentrations above applicable workplace exposure levels can cause respiratory irritation or other pulmonary effects.
- Conditions Aggravated by Exposure** Medical conditions aggravated by exposure to this material may include pre-existing skin disorders.
- Target Organs** This material may cause damage to the following organs: skin.
- Carcinogenic Potential** This product does not contain any components at concentrations above 0.1% which are considered carcinogenic by OSHA, IARC or NTP.

OSHA Hazard Classification is indicated by an "X" in the box adjacent to the hazard title. If no "X" is present, the product does not exhibit the hazard as defined in the OSHA Hazard Communication Standard (29 CFR 1910.1200).					
OSHA Health Hazard Classification		OSHA Physical Hazard Classification			
Irritant <input type="checkbox"/>	Toxic <input type="checkbox"/>	Combustible <input type="checkbox"/>	Explosive <input type="checkbox"/>	Pyrophoric <input type="checkbox"/>	
Sensitizer <input type="checkbox"/>	Highly Toxic <input type="checkbox"/>	Flammable <input type="checkbox"/>	Oxidizer <input type="checkbox"/>	Water-reactive <input type="checkbox"/>	
Corrosive <input type="checkbox"/>	Carcinogenic <input type="checkbox"/>	Compressed Gas <input type="checkbox"/>	Organic Peroxide <input type="checkbox"/>	Unstable <input type="checkbox"/>	

SECTION 4: FIRST AID MEASURES

Take proper precautions to ensure your own health and safety before attempting rescue or providing first aid. For more specific information, refer to Exposure Controls and Personal Protection in Section 8 of this MSDS.

- Inhalation** Move victim to fresh air. If victim is not breathing, immediately begin rescue breathing. If breathing is difficult, 100 percent humidified oxygen should be administered by a qualified individual. Seek medical attention immediately. Keep the affected individual warm and at rest.
- Eye Contact** Check for and remove contact lenses. Flush eyes with cool, clean, low-pressure water while occasionally lifting and lowering eyelids. Seek medical attention if excessive tearing, redness, or pain persists.
- Skin Contact** If burned by hot material, cool skin by quenching with large amounts of cool water. Remove contaminated shoes and clothing. Wipe off excess material. Wash exposed skin with mild soap and water. Seek medical attention if tissue appears damaged or if pain or irritation persists. Thoroughly clean contaminated clothing before reuse. Discard contaminated leather goods. If material is injected under the skin, seek medical attention immediately.
- Ingestion** Do not induce vomiting unless directed to by a physician. Do not give anything to drink unless directed to by a physician. Never give anything by mouth to a person who is not fully conscious. Seek medical attention immediately.
- Notes to Physician** In the event of injection in underlying tissue, immediate treatment should include extensive incision, debridement and saline irrigation. Inadequate treatment can result in ischemia and gangrene. Early symptoms may be minimal.

SECTION 5: FIRE FIGHTING MEASURES

NFPA Flammability Classification	NFPA Class-IIIB combustible material. Slightly combustible!		
Flash Point Method	OPEN CUP: >150°C (>302°F) (Estimated).		
Lower Flammable Limit	No data.	Upper Flammable Limit	No data.
Autoignition Temperature	Not available.		
Hazardous Combustion Products	Carbon dioxide, carbon monoxide, smoke, fumes, unburned hydrocarbons and trace oxides of sulfur, phosphorus, zinc and/or nitrogen.		
Special Properties	This material can burn but will not readily ignite. This material will release vapors when heated above the flash point temperature that can ignite when exposed to a source of ignition. In enclosed spaces, heated vapor can ignite with explosive force. Mists or sprays may burn at temperatures below the flash point.		
Extinguishing Media	Use dry chemical, foam, Carbon Dioxide or water fog.		
Protection of Fire Fighters	Firefighters must use full bunker gear including NIOSH-approved positive pressure self-contained breathing apparatus to protect against potential hazardous combustion or decomposition products and oxygen deficiencies.		

SECTION 6: ACCIDENTAL RELEASE MEASURES

Take proper precautions to ensure your own health and safety before attempting spill control or clean-up. For more specific information, refer to the Emergency Overview on Page 1, Exposure Controls and Personal Protection in Section 8 and Disposal Considerations in Section 13 of this MSDS.

Do not touch damaged containers or spilled material unless wearing appropriate protective equipment. Slipping hazard; do not walk through spilled material. Stop leak if you can do so without risk. For small spills, absorb or cover with dry earth, sand, or other inert non-combustible absorbent material and place into waste containers for later disposal. Contain large spills to maximize product recovery or disposal. Prevent entry into waterways or sewers. In urban area, cleanup spill as soon as possible. In natural environments, seek cleanup advice from specialists to minimize physical habitat damage. This material will float on water. Absorbent pads and similar materials can be used. Comply with all laws and regulation

SECTION 7: HANDLING AND STORAGE

Handling	Avoid contamination and extreme temperatures to minimize product degradation. Empty containers may contain product residues that can ignite with explosive force. Do not pressurize, cut, weld, braze solder, drill, grind or expose containers to flames, sparks, heat or other potential ignition sources. Consult appropriate federal, state and local authorities before reusing, reconditioning, reclaiming, recycling or disposing of empty containers and/or waste residues of this product.
Storage	Keep container closed. Do not store with strong oxidizing agents. Do not store at temperatures above 120° F or in direct sunlight for extended periods of time. Consult appropriate federal, state and local authorities before reusing, reconditioning, reclaiming, recycling or disposing of empty containers or waste residues of this product.

SECTION 8: EXPOSURE CONTROLS AND PERSONAL PROTECTION

Engineering Controls	Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of mists and/or vapors below the recommended exposure limits (see below). An eye wash station and safety shower should be located near the work-station.
Personal Protective Equipment	

CITGO TRANSGARD® Tractor Hydraulic Fluid, Red

Personal protective equipment should be selected based upon the conditions under which this material is used. A hazard assessment of the work area for PPE requirements should be conducted by a qualified professional pursuant to OSHA regulations. The following pictograms represent the minimum requirements for personal protective equipment. For certain operations, additional PPE may be required.

Eye Protection	Safety glasses equipped with side shields are recommended as minimum protection in industrial settings. Wear goggles and/or face shield if splashing or spraying is anticipated. Wear goggles and face shield if material is heated above 125°F (51°C). Have suitable eye wash water available.
Hand Protection	Use gloves constructed of chemical resistant materials such as neoprene or heavy nitrile rubber if frequent or prolonged contact is expected. Use heat-protective gloves when handling product at elevated temperatures.
Body Protection	Use clean and impervious protective clothing (e.g., neoprene or Tyvek®) if splashing or spraying conditions are present. Protective clothing may include long-sleeve outer garment, apron, or lab coat. If significant contact occurs, remove oil-contaminated clothing as soon as possible and promptly shower. Launder contaminated before reuse or discard. Wear heat protective boots and protective clothing when handling material at elevated temperatures.
Respiratory Protection	Vaporization is not expected at ambient temperatures. Therefore, the need for respiratory protection is not anticipated under normal use conditions and with adequate ventilation. If elevated airborne concentrations above applicable workplace exposure levels are anticipated, a NIOSH-approved organic vapor respirator equipped with a dust/mist prefilter should be used. Protection factors vary depending upon the type of respirator used. Respirators should be used in accordance with OSHA requirements (29 CFR 1910.134).
General Comments	Use good personal hygiene practices. Wash hands and other exposed skin areas with plenty of mild soap and water before eating, drinking, smoking, use of toilet facilities, or leaving work. DO NOT use gasoline, kerosene, solvents or harsh abrasives as skin cleaners. Since specific exposure standards/control limits have not been established for this product, the "Oil Mist, Mineral" exposure limits shown below are suggested as minimum control guidelines.

Occupational Exposure Guidelines

Substance	Applicable Workplace Exposure Levels
1) Oil Mist, Mineral	ACGIH (United States). TWA: 5 mg/m ³ STEL: 10 mg/m ³ OSHA (United States). TWA: 5 mg/m ³

SECTION 9: PHYSICAL AND CHEMICAL PROPERTIES

Physical State	Liquid.	Color	Red.	Odor	Mild petroleum odor
Specific Gravity	0.87 (Water = 1)	pH	Not Applicable.	Vapor Density	>1 (Air = 1)
Boiling Point/Range	Not available.	Melting/Freezing Point		Viscosity (cSt @ 40°C)	57
Vapor Pressure	<0.001 kPa (<0.01 mmHg) (at 20°C)	Volatile Characteristics		Additional Properties	Negligible volatility
Solubility in Water	Very slightly soluble in hot water. Insoluble in cold water.				
Gravity, °API (ASTM D287) = 31.6 @ 60° F Density = 7.22 Lbs/gal. Viscosity (ASTM D2161) = AP 285 SUS @ 100° F					

SECTION 10: STABILITY AND REACTIVITY

Chemical Stability	Stable.	Hazardous Polymerization	Not expected to occur.
Conditions to Avoid	Keep away from extreme heat, sparks, open flame, and strongly oxidizing conditions.		
Materials Incompatibility	Strong oxidizers.		
Hazardous Decomposition Products	No additional hazardous decomposition products were identified other than the combustion products identified in Section 5 of this MSDS.		

SECTION 11: TOXICOLOGICAL INFORMATION

For other health-related information, refer to the Emergency Overview on Page 1 and the Hazards Identification in Section 3 of this MSDS.

Toxicity Data

Distillates, petroleum, hydrotreated heavy paraffinic:

ORAL (LD50): Acute: >5000 mg/kg [Rat].
 DERMAL (LD50): Acute: >2000 mg/kg [Rabbit].

Zinc and Zinc Compounds:

ORAL (LD50): Acute: >5000 mg/kg [Rabbit]. >2890 mg/kg [Rat].
 DERMAL (LD50): Acute: >10000 mg/kg [Rabbit].

Distillates, petroleum, solvent-refined heavy paraffinic:

ORAL (LD50): Acute: >5000 mg/kg [Rat].
 DERMAL (LD50): Acute: >2000 mg/kg [Rabbit].

Distillates, petroleum, hydrotreated heavy paraffinic:

Mineral oil mists derived from highly refined oils are reported to have low acute and sub-acute toxicities in animals. Effects from single and short-term repeated exposures to high concentrations of mineral oil mists well above applicable workplace exposure levels include lung inflammatory reaction, lipoid granuloma formation and lipoid pneumonia. In acute and sub-acute studies involving exposures to lower concentrations of mineral oil mists at or near current work place exposure levels produced no significant toxicological effects. In long term studies (up to two years) no carcinogenic effects have been reported in any animal species tested.

Distillates, petroleum, solvent-refined heavy paraffinic:

Mineral oil mists derived from highly refined oils are reported to have low acute and sub-acute toxicities in animals. Effects from single and short-term repeated exposures to high concentrations of mineral oil mists well above applicable workplace exposure levels include lung inflammatory reaction, lipoid granuloma formation and lipoid pneumonia. In acute and sub-acute studies involving exposures to lower concentrations of mineral oil mists at or near current work place exposure levels produced no significant toxicological effects. In long term studies (up to two years) no carcinogenic effects have been reported in any animal species tested. Analyses conducted by method IP 346 indicate that the polycyclic aromatic concentration of this mineral oil is below 3.0 weight percent.

Zinc and Zinc Compounds:

INHALATION (LC50), Acute: > 1310 mg/L (Rat screen level)(4 hours).
 DRAIZE EYE, Acute: Moderate to severe eye irritant. (Rabbit).
 DRAIZE DERMAL, Acute: Mild to moderate skin irritant. (Rabbit).
 BUEHLER DERMAL, Acute: Non-sensitizing. (Guinea Pig).
 28-Day DERMAL, Sub-Chronic: Severe skin irritant. (Rabbit). Reported reduced food consumption resulting in weight loss and testicular atrophy.

Hydraulic Oils:

Repeated or prolonged skin contact with certain hydraulic oils can cause mild skin irritation characterized by drying, cracking (dermatitis) or oil acne. Injection under the skin, in muscle or into the blood stream can cause irritation, inflammation, swelling, fever, and systemic effects, including mild central nervous system depression. Injection of pressurized hydrocarbons can cause severe, permanent tissue damage.

SECTION 12: ECOLOGICAL INFORMATION

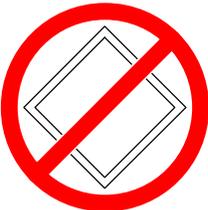

Ecotoxicity	Analysis for ecological effects has not been conducted on this product. However, if spilled, this product and any contaminated soil or water may be harmful to human, animal, and aquatic life. Also, the coating action associated with petroleum and petroleum products can be harmful or fatal to aquatic life and waterfowl.
Environmental Fate	An environmental fate analysis has not been conducted on this specific product. Plants and animals may experience harmful or fatal effects when coated with petroleum-based products. Petroleum-based (mineral) lube oils will normally float on water. In stagnant or slow-flowing waterways, an oil layer can cover a large surface area. As a result, this oil layer might limit or eliminate natural atmospheric oxygen transport into the water. With time, if not removed, oxygen depletion in the waterway may be sufficient to cause a fish kill or create an anaerobic environment.

SECTION 13: DISPOSAL CONSIDERATIONS

Hazard characteristic and regulatory waste stream classification can change with product use. Accordingly, it is the responsibility of the user to determine the proper storage, transportation, treatment and/or disposal methodologies for spent materials and residues at the time of disposition.

Conditions of use may cause this material to become a "hazardous waste", as defined by federal or state regulations. It is the responsibility of the user to determine if the material is a "hazardous waste" at the time of disposal. Transportation, treatment, storage, and disposal of waste material must be conducted in accordance with RCRA regulations (see 40 CFR 260 through 40 CFR 271). State and/or local regulations may be more restrictive. Contact the RCRA/Superfund Hotline at (800) 424-9346 or your regional US EPA office for guidance concerning case specific disposal issues. Empty drums and pails retain residue. DO NOT pressurize, cut, weld, braze, solder, drill, grind, or expose this product's empty container to heat, flame, or other ignition sources. DO NOT attempt to clean it. Empty drums and pails should be drained completely, properly bunged or sealed, and promptly sent to a reconditioner.

SECTION 14: TRANSPORT INFORMATION

DOT Status	Not a U.S. Department of Transportation regulated material.		
Proper Shipping Name	Not regulated.		
Hazard Class	Not regulated.	Packing Group(s)	Not applicable.
		UN/NA ID	Not regulated.
Reportable Quantity	A Reportable Quantity (RQ) has not been established for this material.		
Placards		Emergency Response Guide No.	Not applicable.
		HAZMAT STCC No.	Not available
		MARPOL III Status	Not a DOT "Marine Pollutant" per 49 CFR 171.8.

SECTION 15: REGULATORY INFORMATION

TSCA Inventory	This product and/or its components are listed on the Toxic Substances Control Act (TSCA) inventory.
SARA 302/304	The Superfund Amendments and Reauthorization Act of 1986 (SARA) Title III requires facilities subject to Subparts 302 and 304 to submit emergency planning and notification information based on Threshold Planning Quantities (TPQs) and Reportable Quantities (RQs) for "Extremely Hazardous Substances" listed in 40 CFR 302.4 and 40 CFR 355. No components were identified.
SARA 311/312	The Superfund Amendments and Reauthorization Act of 1986 (SARA) Title III requires facilities subject to this subpart to submit aggregate information on chemicals by "Hazard Category" as defined in 40 CFR 370.2. This material would be classified under the following hazard categories: No SARA 311/312 hazard categories identified.
SARA 313	This product contains the following components in concentrations above de minimis levels that are listed as toxic chemicals in 40 CFR Part 372 pursuant to the requirements of Section 313 of SARA: Zinc and Zinc Compounds, Concentration: 0 - 2%
CERCLA	The Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) requires notification of the National Response Center concerning release of quantities of "hazardous substances" equal to or greater than the reportable quantities (RQ's) listed in 40 CFR 302.4. As defined by CERCLA, the term "hazardous substance" does not include petroleum, including crude oil or any fraction thereof which is not otherwise specifically designated in 40 CFR 302.4. Chemical substances present in this product or refinery stream that may be subject to this statute are: Zinc and Zinc Compounds, Concentration: 0 - 2%
CWA	This material is classified as an oil under Section 311 of the Clean Water Act (CWA) and the Oil Pollution Act of 1990 (OPA). Discharges or spills which produce a visible sheen on waters of the United States, their adjoining shorelines, or into conduits leading to surface waters must be reported to the EPA's National Response Center at (800) 424-8802.
California Proposition 65	This material may contain the following components which are known to the State of California to cause cancer, birth defects or other reproductive harm, and may be subject to the requirements of California Proposition 65 (CA Health & Safety Code Section 25249.5): Naphthalene: 0.0004%
New Jersey Right-to-Know Label	Petroleum Oil (Hydraulic Oil)
Additional Regulatory Remarks	No additional regulatory remarks.

SECTION 16: OTHER INFORMATION

Refer to the top of Page 1 for the HMIS and NFPA Hazard Ratings for this product.

REVISION INFORMATION

Version Number	1.00
Revision Date	08/12/2002
Print Date	Printed on 08/12/2002.

MATERIAL HAZARD EVALUATION
 (Per OSHA Hazard Communication Standard [29 CFR 1910.1200])

Health Precautions: **WARNING:** Fumes from hot product may cause irritation to the skin, nose, throat and lungs.
Safety Precautions: **WARNING:** Hot product can cause burns. If burned by hot product, cool affected area immediately with cool water. Seek medical attention immediately.

SECTION 2: HAZARDOUS INGREDIENTS / IDENTITY INFORMATION

CHEMICAL FAMILY:	DISTILLATE (PETROLEUM) HYDROTREATED LIGHT NAPHTHENIC		
HAZARDOUS COMPONENT(S)	CAL-OSHA PEL-TWA (8 HOURS)	ACGIH TLV-TWA (8 HOUR)	OTHER LIMITS RECOMMENDED
Distillate (Petroleum) Hydrotreated Light Naphthenic CAS No. 64742-53-6	5 mg/m ³ (As oil mist)	5 mg/m ³ (As oil mist)	None
			% BY WEIGHT >99

SECTION 3: HEALTH HAZARDS IDENTIFICATION

ROUTES OF ENTRY:	EYES: Yes	SKIN: Yes	INGESTION: Yes	INHALATION: Yes
------------------	-----------	-----------	----------------	-----------------

POTENTIAL HEALTH EFFECTS:

EYES: Eye contact may result in irritation and redness. Thermal burns may result from contact with hot material. Exposure to high concentrations of vapors may be irritating to the eyes. Prolonged and repeated contact can defat the skin, which may result in dryness, dermatitis and cracking of the skin. Thermal burns may result from contact with hot material.
SKIN: Do not ingest. Ingestion may result in nausea or stomach discomfort. If swallowed do not induce vomiting, call a physician.
INGESTION: Fumes from hot products may be unpleasant and may produce nausea. Remove the person to fresh air if respiratory discomfort occurs.
INHALATION:

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE:

Persons with preexisting skin or respiratory disorders may have their conditions aggravated by overexposure to this material.

CARCINOGENICITY:

ACGIH, NTP, OSHA and IARC carcinogen lists were checked for those components with CAS Registry Numbers (64742-53-6).

ACGIH:
IARC:
NTP:
OSHA:

This product is not listed as carcinogenic. The International Agency for research on cancer has concluded that highly or severely refined light and middle distillates are Group 3 substances, "not classifiable as to their carcinogenicity to humans," based on inadequate human or animal evidence. This product is not listed as carcinogenic. This product is not listed as carcinogenic.

SECTION 4: EMERGENCY AND FIRST AID MEASURES

EYES: Avoid contact with eyes. If contact occurs, immediately flush eyes with water for a minimum of 15 minutes. Seek medical attention immediately.
SKIN: Avoid contact with skin. If contact occurs, wash contact areas with soap and water. Remove and clean oil soaked clothing daily and wash affected area.
INGESTION: Do not induce vomiting. If ingested, seek medical attention.
INHALATION: Not expected to be a problem. However, if respiratory irritation, dizziness, nausea or unconsciousness occurs due to excessive vapor or mist exposure, seek medical attention. If operating conditions create airborne concentrations that exceed the exposure standard, the use of an approved NIOSH/OSHA respirator for organic vapors or air-supplied breathing equipment is recommended.

SECTION 5: FIRE AND EXPLOSION HAZARD DATA

FLAMMABLE LIMITS IN AIR, UPPER: No data available
(% BY VOLUME) LOWER: No data available
FLASH POINT: COC °F: 330° Minimum
EXTINGUISHING MEDIA: Foam, water fog, dry chemical, CO₂
SPECIAL FIRE FIGHTING PROCEDURES: Do not enter confined fire space without proper protective equipment including self-contained breathing apparatus. See Hazardous Decomposition Products.
HAZARDOUS DECOMPOSITION PRODUCTS: Normal combustion forms carbon dioxide and water vapor, and may produce oxides of sulfur and nitrogen. Incomplete combustion can produce carbon monoxide.

SECTION 6: SPILL OR LEAK PROCEDURES

ACCIDENTAL RELEASE MEASURES: In case of spill, clean up using absorbent material such as earth or sand.
WASTE DISPOSAL METHOD: Observe Federal, State and Local regulations covering chemical waste spills.
RCRA HAZARD CLASS: This product is not a characteristic hazardous waste under RCRA. No EPA waste numbers are applicable for this product's components.

SECTION 7: HANDLING AND STORAGE

HANDLING AND STORAGE: Avoid fire, sparks or open flame. Wear appropriate personal protective equipment to ensure that this product does not contact the eyes or skin.
VENTILATION: Use adequate ventilation to keep the airborne concentrations of this material below the established exposure standard.

SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION

RESPIRATORY PROTECTION: If operating conditions create airborne concentrations that exceed the exposure standard for this product, the use of an approved NIOSH/OSHA respirator for organic vapors or air supplied breathing equipment is recommended.
EYE PROTECTION: Wear appropriate safety glasses, goggles or full-face shield.
SKIN PROTECTION: Long sleeve cotton shirt and cotton pants are recommended. Wear appropriate gloves.

___ WATER SPRAY ___ CARBON DIOXIDE X OTHER:
___ FOAM ___ DRY CHEMICAL

SPECIAL FIREFIGHTING PROCEDURES: USE FULL PROTECTIVE CLOTHING AND
SELF-CONTAINED BREATHING APPARATUS. THERMAL DECOMPOSITION EMITS
TOXIC FUMES OF OXIDES OF PHOSPHORUS. HARMFUL TO INGEST

UNUSUAL FIRE AND EXPLOSION HAZARDS: NONE

V. HEALTH HAZARD INFORMATION

SYMPTOMS OF OVEREXPOSURE FOR EACH POTENTIAL ROUTE OF EXPOSURE.

INHALED: SEVERE IRRITANT - TCLO (HUMAN)

CONTACT WITH SKIN OR EYES: SEVERE IRRITANT EYE: CHEMICAL BURN
LIKELY. SKIN: CORROSIVE TO TISSUE.

ABSORBED THROUGH SKIN: ACUTELY HAZARDOUS LD50 (RABBIT)

SWALLOWED: ACUTELY HAZARDOUS. LD50 (RAT)

HEALTH EFFECTS OR RISKS FROM EXPOSURE. EXPLAIN IN LAY TERMS. ATTACH
EXTRA PAGE IF MORE SPACE IS NEEDED.

ACUTE: IRRITANT, SLIGHTLY TOXIC WHEN INHALED OR INGESTED.

CHRONIC: TOXIC WITH REPEATED INHALATION OR INGESTION. CAUSES BURNS
TO EXPOSED TISSUE.

FIRST AID: EMERGENCY PROCEDURES

EYE CONTACT: FLUSH WITH COPIOUS WATER FOR AT LEAST 15 MINUTES.
IF IRRITATION PERSISTS, OBTAIN MEDICAL ATTENTION.

VII. SPILL, LEAK, AND DISPOSAL PROCEDURES

SPILL RESPONSE PROCEDURES (INCLUDE EMPLOYEE PROTECTION MEASURES): SALVAGE OR NEUTRALIZE. SODA ASH AND LIME ARE NEUTRALIZING AGENTS.

PREPARING WASTES FOR DISPOSAL (CONTAINER TYPES, NEUTRALIZATION, ETC.): NEUTRALIZE - FOLLOWED BY DISCHARGE INTO A TREATMENT SYSTEM IN ACCORDANCE WITH LOCAL, STATE, AND FEDERAL REGULATIONS.

NOTE: DISPOSE OF ALL WASTES IN ACCORDANCE WITH FEDERAL, STATE AND LOCAL REGULATIONS.

VIII. SPECIAL HANDLING INFORMATION

VENTILATION AND ENGINEERING CONTROLS: ADEQUATE TO MEET MAXIMUM EXPOSURE FOR ACID MIST OF 1mg/cu.M. IN 8 HOURS.

RESPIRATORY PROTECTION (TYPE): USE NIOSH/MSHA ACID GAS RESPIRATOR.

EYE PROTECTION (TYPE): WEAR CHEMICAL GOGGLES, IF SPLASHING, SPRAY OR MIST CONDITIONS ARE POSSIBLE.

GLOVES (SPECIFY MATERIAL): RUBBER OF NEOPRENE

OTHER CLOTHING AND EQUIPMENT: RUBBER APRON AND BOOTS.

WORK PRACTICES, HYGIENIC PRACTICES: PROTECT EYES AND SKIN FROM CONTACT.

OTHER HANDLING AND STORAGE REQUIREMENTS: NONE

PROTECTIVE MEASURES DURING MAINTENANCE OF CONTAMINATED EQUIPMENT: PROTECT EYES AND SKIN FROM CONTACT.

SKIN CONTACT: WASH OFF WITH WATER. IF IRRITATION PERSISTS, OBTAIN MEDICAL ATTENTION.

INHALED: REMOVE FROM EXPOSURE. IF BREATHING IS DIFFICULT OR DISCOMFORT PERSISTS, OBTAIN MEDICAL ATTENTION.

SWALLOWED: RINSE MOUTH WITH WATER. GIVE COPIOUS WATER TO CAUSE DILUTION IN STOMACH. DO NOT INDUCE VOMITING.

SUSPECTED CANCER AGENT?

NO: THIS PRODUCT'S INGREDIENTS ARE NOT FOUND IN THE LISTS BELOW.

YES: FEDERAL OSHA NTP IARC

CALIFORNIA EMPLOYERS USING CAL/OSHA REGULATED CARCINOGENS MUST REGISTER WITH CAL/OSHA. THE CAL/OSHA AND FEDERAL OSHA CARCINOGEN LISTS ARE SIMILAR.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE

MODERATELY CORROSIVE AGENT WHICH MAY BURN ANY EXPOSED TISSUES UPON OTHER THAN BRIEF CONTACT.

VI. REACTIVITY DATA

STABILITY: STABLE UNSTABLE

CONDITIONS TO AVOID:

MIXING WITH ALKALI, CHLORINE, OR ORGANIC CHEMICALS

INCOMPATIBILITY (MATERIALS TO AVOID): CONTACT WITH ALKALINE MATERIAL AND SOME METALS.

HAZARDOUS DECOMPOSITION PRODUCTS (INCLUDING COMBUSTION PRODUCTS):

HAZARDOUS POLYMERIZATION: MAY OCCUR WILL NOT OCCUR

CONDITIONS TO AVOID:

2. Composition, Information on Ingredients

The ingredients listed below have been associated with one or more immediate and/or delayed(*) health hazards. Risk of damage and effects depends upon duration and level of exposure. BEFORE USING, HANDLING, OR EXPOSURE TO THESE INGREDIENTS, READ AND UNDERSTAND THE MSDS.

	% by weight
- 0 *Formaldehyde	30.0 - 50.0
- 6-1 *Methanol	10.0 - 30.0

3. Hazards Identification

3.1 Emergency Overview

Appearance Clear, colorless liquid
Odor Pungent

WARNING!

May further react at high temperatures to form methanol, formic acid or methyals. At low temperatures will self-polymerize to form paraformaldehyde.

COMBUSTIBLE

Harmful if inhaled.
Can cause central nervous system depression.
Causes chemical burns to eyes.
May be harmful if swallowed.
Ingestion may cause blindness.
May be harmful if absorbed through skin.
Causes skin irritation.
May cause allergic skin reaction.

NORTH AMERICAN EMERGENCY RESPONSE GUIDE, 2000, NO: 132

H = 3 (serious)
FLAMMABILITY = 2 (moderate)
REACTIVITY = 1 (slight)
CHRONIC =

SUBJECT: FORMALDEHYDE 37% 10 - 30% M

ORDER NO: 340974

PROD NO : 665002

3.2 Potential Health Effects

Immediate Hazards

INGESTION: May be harmful if swallowed.

Ingestion may cause blindness.

Can cause central nervous system depression.

If accidentally swallowed, burns or irritation to mucous membranes, esophagus or GI tract can result.

INHALATION: Harmful if inhaled.

Can cause central nervous system depression.

Can cause irritation of nose, throat and lungs.

SKIN: ~~May be harmful if absorbed through skin. Causes irritation.~~

EYES: Causes chemical burns.

5-1 Methanol

Can cause central nervous system depression. Signs and symptoms may include dizziness, headache, nausea, vomiting, unconsciousness and asphyxiation.

Reports have associated repeated and prolonged occupational overexposure to solvents with permanent brain and nervous system damage.

Delayed Hazards

67-56-1 Methanol

Possible reproductive disorders from prolonged exposure.

May cause lung damage based on animal data. Pre-existing respiratory disorders may be aggravated by exposure.

May cause liver damage based on animal data.

May cause kidney damage based on animal data.

May cause blindness if swallowed.

-- See Footnote

50-00-0 Formaldehyde

May cause cancer. OSHA regulates formaldehyde as a potential human carcinogen.

See the OSHA Formaldehyde Workplace Standard at 29CFR 1910.1048. Rats chronically exposed to 14 ppm formaldehyde contracted nasal cancer. The National Toxicology Program (NTP) has listed formaldehyde as a probable human carcinogen. The International Agency for Research on Cancer (IARC) has concluded formaldehyde is carcinogenic to humans.

Safe handling and use instructions are provided in this MSDS and in the OSHA Formaldehyde Workplace Standard at 29CFR1910.1048. OSHA has identified 0.5 ppm as the "Action Level". Please review and understand the guidance contained in this MSDS and refer to the OSHA Formaldehyde Standard for regulatory requirements that may be applicable to your operation and use.

For further information and a review of various studies, go to

DUCT: FORMALDEHYDE 37% 10 - 30% M

ORDER NO: 340974

PROD NO : 665002

www.osha.gov/SLTC/formaldehyde, www.iarc.fr and other authoritative websites. May cause allergic skin reaction. Some reports suggest that formaldehyde may cause respiratory sensitization, such as asthma, and that pre-existing respiratory and skin disorders may be aggravated by exposure.

Footnote: As of the date of issuance of this document, this material has not been listed by NTP, classified by IARC nor regulated by OSHA as a carcinogen.

4. First Aid Measures

INGESTION:

If accidentally swallowed, dilute by drinking large quantities of water. If the individual is drowsy or unconscious, do not give anything by mouth. Immediately contact poison control center or hospital emergency room for advice on whether to induce vomiting or for any other additional treatment directions.

INHALATION:

Move to fresh air. If not breathing give artificial respiration preferably mouth-to-mouth. If breathing is difficult, give oxygen. Get medical attention immediately.

SKIN:

Immediately remove all contaminated clothing, including shoes. Wash the affected area of the body with soap or mild detergent and large quantities of water for at least 20 minutes. Contact a physician if irritation persists. If there are chemical burns, cover the area with sterile, dry dressings and get medical attention immediately.

EYES:

Immediately flush eyes with plenty of water for at least 15 minutes. Eyelids should be held apart during irrigation to ensure water contact with entire surface of eyes and lids. Get medical attention immediately.

5. Fire Fighting Measures

Flash point 58 C (136 F) Tag Closed Cup ASTM D 56

Lower explosion limit Approx. 7 % (V)

Upper explosion limit Approx. 70 % (V)

Autoignition temperature Approx. 420 C (788 F)

COMBUSTIBLE. Keep away from heat and flame.

In case of fire, use water spray, dry chemical, "alcohol" foam or CO2. Use water to keep fire-exposed containers cool.

Accidental Release Measures

Always wear appropriate protective equipment. Eliminate all ignition sources and ventilate the area to reduce the potential for exposure, fire and explosion. Recover and reuse as much liquid as possible. Large quantities:

L101

SUBJECT: FORMALDEHYDE 37% TO - 30% N

ORDER NO: 340974

PROD NO : 665002

Enclose with diking material to prevent seepage into sewer systems, surface/ground water or natural bodies of water. If possible neutralize with dilute (45%) solutions of ammonium hydroxide, sodium hydroxide, sodium bisulfite or sodium sulfite. Small quantities; Soak up with absorbent material (vermiculite, dry sand, earth) and remove to a chemical disposal area. Follow all emergency notification and reporting regulations.

7. Handling and Storage

7.1 Handling

Handle in accordance with good industrial hygiene and safety practices. These practices include avoiding unnecessary exposure and removal of the material from eyes, skin and clothing. Wash thoroughly after handling. Always use appropriate Personal Protective Equipment (PPE).

INHALATION:

Do not breathe vapor. Use with adequate ventilation.

SKIN CONTACT:

Avoid contact with skin and clothing.

EYES:

Do not get in eyes.

7.2 Storage

Storage temperature depends on methanol content and should be controlled to avoid precipitation or vaporization. See technical bulletin for recommended storage temperatures. Remove plug slowly to relieve pressure. Formaldehyde solutions will start to precipitate paraformaldehyde if stored below their recommended storage temperatures making the freezing point difficult to determine.

8. Exposure Controls/Personal Protection

8.1 Exposure Controls

ENGINEERING CONTROLS: The following exposure control techniques may be used to effectively minimize employee exposure: local exhaust ventilation, enclosed system design, process isolation and remote control in combination with appropriate use of personal protective equipment and prudent work practices. These techniques may not necessarily address all issues pertaining to your operations. We, therefore, recommend that you consult with experts or your choice to determine whether or not your programs are adequate. Airborne contaminants are generated when the material is heated or cooled; sufficient ventilation in volume and air flow patterns should be provided to keep air contaminant concentration levels below acceptable criteria.

UCT: FORMALDEHYDE 37% 10 - 30% M

ORDER NO: 340974

PROD NO : 655002

8.2 Personal Protection

Where formaldehyde gas concentrations can exceed acceptable criteria, use NIOSH (42 CFR Part 84) approved full-facepiece respiratory protection equipment. Respirators should be selected based on the concentration of formaldehyde in air in accordance with the OSHA Formaldehyde Standard Respiratory Protection requirements at 29CFR 1910.1048(g), and the OSHA Respiratory Protection Standard at 29CFR 1910.134 or other applicable standards or guidelines, including ANSI standards regarding respiratory protection. A full-facepiece respirator with cartridges or canisters specifically approved for formaldehyde may be used for exposure levels up to 7.5 ppm (10 times the PEL). Chemical safety goggles must be worn if there is a possibility of contact with liquid formaldehyde or excessive gas-phase exposures. A full-facepiece respirator complies with this requirement. Wear protective gloves as required to prevent skin contact. Protective gloves must be worn when handling formaldehyde solutions of 1% or higher. Consult your glove manufacturer for specific information on permeation, degradation and breakthrough data to ensure proper selection. Based on available information, butyl, nitrile and Viton appear to be quite impervious to various strengths of formaldehyde solutions. Other glove materials may be equally suitable depending on composition, thickness and use conditions. Where high concentrations of formaldehyde may be present, such as in an emergency, full body protection should be worn. Other protective equipment that must be available when handling formaldehyde solutions of 1% or higher include eye wash fountains and safety showers. Reusable protective clothing should be cleaned and ventilated after any formaldehyde contamination. See the OSHA Formaldehyde Standard requirements at 29CFR 1910.1048(h) Protective Equipment and Clothing and OSHA 29CFR 1910.1048(i) Hygiene Protection for other specific protective measures based on the form of formaldehyde, the conditions of use and the hazards to be prevented.

8.3 Exposure Guidelines

50-00-0	Formaldehyde			
ACGIH TLV	Ceiling	0.3 ppm	0.37 mg/m3	A2 - Suspected Human Carcinogen: SEN
OSHA PEL	8-hr TWA	0.75 ppm	0.9 mg/m3	
	STEL (15 min)	2 ppm	2.5 mg/m3	
57-56-1	Methanol			
1 TLV	8-hr TWA	200 ppm	262 mg/m3	Skin
(15 min)	250 ppm	328 mg/m3		
PEL	8-hr TWA	200 ppm	260 mg/m3	
	Remanded TWA	200 ppm	260 mg/m3	Skin: 1989 PEL remanded, but in effect in some states

40

SUBJECT: FORMALDEHYDE 37% 10 - 30% M

ORDER NO: 340974

PROD NO : 555002

Remanded STEL 250 ppm 310 mg/m3

9. Physical and Chemical Properties

Appearance	Clear, colorless liquid
Odor	Pungent
Odor threshold	Not available
Specific gravity	1.078 - 1.087
pH	2.5-3.6
Freezing point	See storage section
Solubility in water	Infinite
Octanol/water partition coefficient	Pow 0.35
Vapor pressure	Approx. 40 mm Hg @25 C (77 F)
Vapor density	Approx. 1
Evaporation rate	Less than 1 (Butyl Acetate = 1)
Boiling point, 760 mm Hg	Approx. 100 C (212 F)

Stability and Reactivity

Stable, but may further react at high temperatures to form methanol, formic acid or methylals. At low temperatures will self-polymerize to form paraformaldehyde.

Incompatibilities:

Reacts with many compounds. Reaction with phenol, strong acids or alkalis may be violent. Reaction with hydrochloric acid may form bis-chloromethyl ether, an OSHA regulated carcinogen.

Decomposition products may include:

CO, CO2.

Hazardous polymerization:

Will not occur.

11. Toxicological Information

See Section 3 Hazards Identification information.

50-00-0 Formaldehyde

LC50: rat--0.59 mg/l (Sax)

LD50: Oral-rat= 800 mg/kg (Merck); Skin-rabbit= 270 mg/kg (Sax)

57-56-1 Methanol

LC50: rat=64,000 mg/l/4 h (Sax)

Oral-rat= 5,628 mg/kg (Sax); Skin-rabbit= 20,000 mg/kg (Sax)

Ecological Information

Formaldehyde is highly toxic to algae, protozoa and other unicellular organisms and slightly toxic to fish. In the atmosphere the material is

MCT: FORMALDEHYDE 37% 10 - 30% M

ORDER NO: 340974

REQD NO : 665002

rapidly degraded by photolysis and photooxidation. Formaldehyde is mobile in the soil. In water or soil, formaldehyde is biodegraded in a few days. Experiments performed on a variety of fish and shrimp show no bioconcentration of formaldehyde.

Ecotoxicity:

Algae(Scenedesmus): toxic: 0.3-0.5 mg/l

Arthropoda(daphnia): toxic: 2 mg/l

Fish (guppies): TLm = 50-200 mg/l

Environmental Fate:

BOD5 = 60% of ThOD = 0.6-1.07 standard dilution at (250 mg/l)

Octanol/Water Partition Coefficient = 0.35 (KOW)

13. Disposal Considerations

Clear free liquid. Absorb residue and dispose of according to local, provincial, and federal requirements. Empty containers: May contain flammable vapors. DO NOT cut, puncture or weld on or nearby.

14. Transport Information

14.1 U.S. Department of Transportation (DOT)

The data provided in this section is for information only and may not be specific to your package size. You will need to apply the appropriate regulations to properly classify your shipment for transportation.

 FOAM _____ DRY CHEMICAL

SPECIAL FIREFIGHTING PROCEDURES: PRODUCT IS NOT COMBUSTIBLE, USE APPROPRIATE AGENTS FOR MATERIALS SURROUNDING IT.

UNUSUAL FIRE AND EXPLOSION HAZARDS: WILL LIBERATE FLAMMABLE HYDROGEN GAS UPON CONTACT WITH ANY METALS.

V. FIRST AID INFORMATION

SYMPTOMS OF OVEREXPOSURE FOR EACH POTENTIAL ROUTE OF EXPOSURE.

EYES: IMMEDIATELY FLUSH WITH LARGE AMOUNTS OF WATER FOR AT LEAST 15 MINUTES, OCCASIONALLY LIFTING THE UPPER AND LOWER EYELIDS. CALL A PHYSICIAN AT ONCE.

CONTACT WITH SKIN: IMMEDIATELY FLUSH WITH WATER OF AT LEAST 15 MINUTES. CALL A PHYSICIAN. IF CLOTHING COMES IN CONTACT WITH THE PRODUCT, THE CLOTHING SHOULD BE REMOVED IMMEDIATELY AND SHOULD BE LAUNDERED BEFORE RE-USE.

INGESTION: IMMEDIATELY DRINK LARGE QUANTITIES OF WATER. DO NOT INDUCE VOMITING. CALL A PHYSICIAN AT ONCE. DO NOT GIVE ANYTHING BY MOUTH IF THE PERSON IS UNCONSCIOUS OR IF HAVING CONVULSIONS. FLUORIDE - LETHAL DOSE .03MG TO .11MG/LITRE

INHALATION: IF PERSON EXPERIENCES NAUSEA, HEADACHE OR DIZZINESS, PERSON SHOULD STOP WORK IMMEDIATELY AND MOVE TO FRESH AIR UNTIL THESE SYMPTOMS DISAPPEAR. IF BREATHING IS DIFFICULT, ADMINISTER OXYGEN, KEEP THE PERSON WARM AND AT REST. CALL A PHYSICIAN. IN THE EVENT THAT AN INDIVIDUAL INHALES ENOUGH VAPOR TO LOSE CONSCIOUSNESS, PERSON SHOULD BE MOVED TO FRESH AIR AT ONCE AND A PHYSICIAN SHOULD BE CALLED IMMEDIATELY. IF BREATHING HAS STOPPED, ARTIFICIAL RESPIRATION SHOULD BE GIVEN IMMEDIATELY. IN ALL CASES, ENSURE ADEQUATE VENTILATION AND PROVIDE RESPIRATORY PROTECTION BEFORE THE PERSON RETURNS TO WORK.

NOTE TO PHYSICIAN: FLUORIDE ION FOUND IN HYDROFLUORIC ACID READILY PENETRATES THE SKIN AND OTHER TISSUES CAUSING DESTRUCTION OF DEEP

TISSUE LAYERS INCLUDING BONE. TREATMENT IS DIRECTED TOWARD TYING UP THE FLUORIDE ION AND CAN BE ACCOMPLISHED BY THE USE OF QUATERNARY AMMONIUM COMPOUNDS (SUCH AS BENZALKONIUM OR BENZETHONIUM CHLORIDE) OR CALCIUM GLUCONATE. THE EFFECTS OF CONTACT WITH HYDROFLUORIC ACID OR ITS VAPORS MAY BE DELAYED. LIFE THREATENING HYPOCALCEMIA CAN RESULT FROM EXPOSURE AND SHOULD BE SEARCHED FOR AND AGGRESSIVELY TREATED WHEN PRESENT.

HEALTH EFFECTS OR RISKS FROM EXPOSURE. EXPLAIN IN LAY TERMS. ATTACH EXTRA PAGE IF MORE SPACE IS NEEDED.

INHALATION

ACUTE: INHALATION OF HYDROFLUORIC ACID MIST OR HYDROGEN FLUORIDE GAS MAY CAUSE SEVERE IRRITATION OF THE MUCOUS MEMBRANES AND RESPIRATORY TRACT. ACUTE SYMPTOMS MAY INCLUDE BURNING OF THE NOSE, THROAT AND UPPER RESPIRATORY TRACT, NASAL CONGESTION, COUGHING, CHOKING, CHILLS, CHEST TIGHTNESS, AND BRONCHITIS. HIGH CONCENTRATIONS IN AIR MAY CAUSE RAPID INFLAMMATION AND CONGESTION OF THE LUNGS AS WELL AS SEVERE BREATHING DIFFICULTIES THAT MAY RESULT IN PULMONARY EDEMA. SEVERE RESPIRATORY EFFECTS MAY BE DELAYED IN ONSET (AFTER THE EXPOSURE HAS CEASED). IN SOME SEVERE ACUTE INHALATION CASES, INHALATION OF HF HAS CAUSED SOME DELETERIOUS EFFECTS ON FLUORIDE CONTENT IN THE BONE (HYPOCALCEMIA).

CHRONIC: REPEATED INHALATION AT EXPOSURE CONCENTRATIONS GREATER THAN PRESENT OCCUPATIONAL EXPOSURE LIMITS MAY CAUSE AN INCREASE IN BONE AND TOOTH FLUORIDE CONTENT (DECALCIFICATION).

SKIN

ACUTE: CONTACT WITH THE LIQUID OR HIGH CONCENTRATIONS IN THE AIR MAY BE CORROSIVE WITH SEVERE BURNS WITH LOCALIZED DESTRUCTION OF TISSUE. THIS MAY RESULT IN DEEP TISSUE DESTRUCTION AND POSSIBLE DECALCIFICATION OF BONE. EFFECTS ARE OFTEN DELAYED IN ONSET (2 TO 24 HOURS). INITIAL SIGNS MAY BE A BURNING SENSATION OR STEADY THROBBING PAIN. IF THE NAILS ARE INVOLVED, THE BURN MAY INITIALLY APPEAR AS A BLUE-BLACK DISCOLORATION OF THE NAIL BED WITH SIGNIFICANT PAIN.

CHRONIC: EFFECTS OF ACUTE EXPOSURE MAY APPEAR DELAYED IN ONSET. IF SIGNIFICANT EXPOSURE HAS OCCURRED A SYSTEMIC HYPOCALCEMIA (DECALCIFICATION OF BONE AND TOOTH) MAY OCCUR.

EYE

ACUTE: CONTACT WITH EYES MAY CAUSE SEVERE IRRITATION AND BE CORROSIVE (BURNS) WITH POSSIBLE PERMANENT EYE DAMAGE AND IMPAIRMENT OF VISION.

INGESTION

ACUTE: INGESTION MAY RESULT IN SEVERE BURNS TO THE MOUTH, THROAT AND STOMACH. EFFECTS MAY INCLUDE SEVERE SWELLING OF THE ORAL MUCOSA, NAUSEA, VOMITING, PAIN, DIARRHEA, BLEEDING, ULCERATION AND MAY BE FATAL.

CHRONIC: THERE IS NO DATA AVAILABLE ON THE CHRONIC INGESTION OF HYDROFLUORIC ACID. ITS ACUTE EFFECTS WOULD PROBABLY MAKE THIS OCCURRENCE UNLIKELY.

VI. TOXICOLOGY AND HEALTH INFORMATION

ROUTES OF ABSORPTION

ORAL, DERMAL, INHALATION, EYE CONTACT

WARNING STATEMENTS AND WARNING PROPERTIES

CORROSIVE TO ALL TISSUES CONTACTED INCLUDING SKIN.
BURNS MAY BE DELAYED IN ONSET AND NOT BE READILY VISIBLE.
MAY BE FATAL IF SWALLOWED.
HARMFUL IF INHALED.

HUMAN DOSE RESPONSE DATA

ODOR THRESHOLD: THE ODOR THRESHOLD FOR HYDROGEN FLUORIDE HAS BEEN REPORTED TO BE BETWEEN 0.03 AND 0.11 MG/CUBIC METER.

INHALATION THRESHOLD: HYDROFLUORIC ACID IS DIFFERENT THAN MANY ACIDS IN THAT IT MAY CAUSE EFFECTS THAT ARE NOT READILY OBSERVED. THEREFORE, IRRITATION THRESHOLD FOR THE ACID ITSELF IS NOT RELEVANT. REPEATED EXPOSURE TO HYDROGEN FLUORIDE GAS FOR 6 HOURS/DAY, 5 DAYS/WEEK FOR 15 DAYS AT CONCENTRATIONS BETWEEN 2.1 AND 3.9 MG/CUBIC METER HAS BEEN SHOWN TO CAUSE SLIGHT IRRITATION OF THE EXPOSED SKIN, EYES, AND NOSE IN HUMANS.

TOXIC DOSE AND EFFECTS: HYDROFLUORIC ACID HAS CAUSED NUMEROUS CASES OF BURNS TO THE SKIN AND EYES AND HAS BEEN KNOWN TO CAUSE EFFECTS ON THE RESPIRATORY TRACT. IN EXTREME SITUATIONS THIS HAS RESULTED IN EFFECTS OF FLUORIDE CONTENT OF THE BONE.

IMMEDIATELY DANGEROUS TO LIFE OR HEALTH: THE IDLH FOR HYDROGEN FLUORIDE IS 20 PPM IN AIR.

SIGNS, SYMPTOMS, AND EFFECTS OF EXPOSURE

INHALATION:

ACUTE: INHALATION OF HYDROFLUORIC ACID MIST OR HYDROGEN FLUORIDE GAS MAY CAUSE SEVERE IRRITATION OF THE MUCOUS MEMBRANES AND RESPIRATORY TRACT. ACUTE SYMPTOMS MAY INCLUDE BURNING OF THE NOSE, THROAT AND UPPER RESPIRATORY TRACT, NASAL CONGESTION, COUGHING, CHOKING, CHILLS, CHEST TIGHTNESS, AND BRONCHITIS. HIGH CONCENTRATIONS IN AIR MAY CAUSE RAPID INFLAMMATION AND CONGESTION OF THE LUNGS AS WELL AS SEVER BREATHING DIFFICULTIES THAT MAY RESULT IN PULMONARY EDEMA. SEVER RESPIRATORY EFFECTS MAY BE DELAYED IN ONSET (AFTER THE EXPOSURE HAS CEASED). IN SOME SEVERE ACUTE INHALATION CASES, INHALATION OF HF HAS CAUSED SOME DELETERIOUS EFFECTS ON FLUORIDE CONTENT IN THE BONE (HYPOCALCEMIA).

CHRONIC: REPEATED INHALATION AT EXPOSURE CONCENTRATIONS GREATER THAN PRESENT OCCUPATIONAL EXPOSURE LIMITS MAY CAUSE AN INCREASE IN BONE AND TOOTH FLUORIDE CONTENT (DECALCIFICATION).

SKIN:

ACUTE: CONTACT WITH THE LIQUID OR HIGH CONCENTRATIONS IN THE AIR MAY BE CORROSIVE WITH SEVERE BURNS WITH LOCALIZED DESTRUCTION OF TISSUE. THIS MAY RESULT IN DEEP TISSUE DESTRUCTION AND POSSIBLE DECALCIFICATION OF BONE. EFFECTS ARE OFTEN DELAYED IN ONSET (2 TO 24 HOURS). INITIAL SIGNS MAY BE A BURNING SENSATION OR STEADY THROBBING PAIN. IF THE NAILS ARE INVOLVED, THE BURN MAY INITIALLY APPEAR AS A BLUE-BLACK DISCOLORATION OF THE NAIL BED WITH SIGNIFICANT PAIN.

CHRONIC: EFFECTS OF ACUTE EXPOSURE MAY APPEAR DELAYED IN ONSET. IF A SIGNIFICANT EXPOSURE HAS OCCURRED A SYSTEMIC HYPOCALCEMIA (DECALCIFICATION OF BONE AND TOOTH) MAY OCCUR.

EYE:

ACUTE: CONTACT WITH EYES MAY CAUSE SEVERE IRRITATION AND BE CORROSIVE (BURNS) WITH POSSIBLE PERMANENT EYE DAMAGE AND IMPAIRMENT OF VISION.

INGESTION:

ACUTE: INGESTION MAY RESULT IN SEVERE BURNS TO THE MOUTH, THROAT AND STOMACH. EFFECTS MAY INCLUDE SEVERE SWELLING OF THE ORAL MUCOSA, NAUSEA, VOMITING, PAIN, DIARRHEA, BLEEDING, ULCERATION AND MAY BE FATAL.

CHRONIC: THERE IS NO DATA AVAILABLE ON THE CHRONIC INGESTION OF HYDROFLUORIC ACID. ITS ACUTE EFFECTS WOULD PROBABLY MAKE THIS OCCURRENCE UNLIKELY.

INTERACTIONS WITH OTHER CHEMICALS WHICH ENHANCE TOXICITY:
NONE KNOWN OR REPORTED.

VII. ANIMAL TOXICOLOGY

ACUTE TOXICITY

ORAL LD 50: NO AVAILABLE DATA
DERMAL LD 50: NO AVAILABLE DATA
INHALATION LD 50: 342 PPM/1 HOUR (MOUSE)

AQUATIC TOXICITY

FLUORIDE IS A NATURAL CONSTITUENT OF MANY INFLUENT WATERS BECAUSE IT IS ADDED TO MANY MUNICIPAL WATER SUPPLIES. THERE IS SOME EVIDENCE IN THE LITERATURE THAT VALUES OF 1.5 MG FLUORIDE/LITER OF WATER MAY CAUSE SLIGHT EFFECTS ON SOME SPECIES OF FISH. AT LEVELS GREATER THAN 100 MG FLUORIDE/LITER OF WATER, LETHALITY IN SEVERAL SPECIES HAS BEEN REPORTED.

ACUTE TARGET ORGANS EFFECTS IN LABORATORY ANIMALS

THE PRIMARY TOXIC EFFECTS OF ACUTE HYDROGEN FLUORIDE OR HYDROFLUORIC ACID EXPOSURE IN LABORATORY ANIMALS IS ON THE RESPIRATORY SYSTEM. SHORT EXPOSURES OF UP TO 3 HOURS AT CONCENTRATIONS OF 200-20,000 MG/CUBIC METER RESULTED IN SEVERE IRRITATION OF THE RESPIRATORY TRACTS AND EYES OF RABBITS, DOGS, GUINEA PIGS, RAT, AND MICE, FOLLOWED BY DEATH IN MOST OF THE EXPOSED ANIMALS. SEVERAL ANIMAL STUDIES HAVE SHOWN THAT INHALATION OF HIGH CONCENTRATIONS OF HYDROGEN FLUORIDE OR DIRECT CONTACT RESULTS IN INCREASED DEPOSITION OF FLUORIDE IN THE BONES.

CHRONIC TARGET EFFECTS IN LABORATORY ANIMALS

NO CHRONIC TOXICITY DATA IN LABORATORY ANIMALS IS AVAILABLE ON HYDROGEN FLUORIDE OR HYDROFLUORIC ACID. HOWEVER, REPEATED EXPOSURE EXPERIMENTS IN LABORATORY ANIMALS HAVE SHOWN SIMILAR TARGET ORGAN EFFECTS AS IN ACUTE EXPERIMENTS. RATS, MICE, GUINEA PIGS, RABBITS, AND DOGS EXPOSED AT CONCENTRATIONS OF HYDROGEN FLUORIDE OF 25 MG/CUBIC METER FOR 6 HOURS/DAY, 6 DAYS/WEEK FOR 65 WEEKS SHOWED PULMONARY EDEMA AND HEMORRHAGE. CORNEAL ULCERATIONS OCCURRED IN LABORATORY ANIMALS AT REPEATED EXPOSURES AS LOW AS 8 MG/CUBIC METER. REPEATED EXPOSURES OF LABORATORY ANIMALS HAS ALSO SHOWN TO CAUSE EFFECTS ON THE KIDNEY AND LIVER AT EXPOSURES AS LOW AS 15 MG/CUBIC METER.

DEVELOPMENTAL AND REPRODUCTIVE TOXICITY

IN ADDITION TO HEMORRHAGE AND EDEMA OF THE LUNG, DEGENERATIVE TESTICULAR CHANGES AND ULCERATIONS OF THE SCROTUM WERE NOTED IN DOGS EXPOSED FOR 5 WEEKS AND 6 HOURS/DAY, 6 DAYS/WEEK TO 25 MG/CUBIC METER HYDROGEN FLUORIDE GAS. THE AMERICAN MEDICAL ASSOCIATION ADVISORY PANEL ON REPRODUCTIVE HAZARDS IN THE WORKPLACE DOES NOT BELIEVE THAT HUMAN EXPOSURES AT OR BELOW RECOMMENDED WORKPLACE LIMITS WILL RESULT IN A RISK TO THE MOTHER OR FETUS.

MUTAGENICITY

THERE ARE SOME REPORTS IN THE LITERATURE THAT SUGGEST THAT EXPOSURE TO HYDROGEN FLUORIDE MAY PRODUCE EFFECTS ON GENETIC MATERIAL. THESE TESTS HAVE NOT BEEN WELL SUBSTANTIATED AND ARE NOT CONCLUSIVE ON THE MUTAGENIC POTENTIAL FOR HUMANS.

SUSPECTED CANCER AGENT?

NO: THIS PRODUCT'S INGREDIENTS ARE NOT FOUND IN THE LISTS BELOW.

YES: **FEDERAL OSHA** **NTP** **IARC**

CALIFORNIA EMPLOYERS USING CAL/OSHA REGULATED CARCINOGENS MUST REGISTER WITH CAL/OSHA. THE CAL/OSHA AND FEDERAL OSHA CARCINOGEN LISTS ARE SIMILAR.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE

ASTHMA, EMPHYSEMA, AND OTHER RESPIRATORY DISEASES.

VIII. REACTIVITY DATA

STABILITY: STABLE UNSTABLE

INCOMPATIBILITY (MATERIALS TO AVOID): STRONG CAUSTIC AND CHLORINE.

HAZARDOUS DECOMPOSITION PRODUCTS (INCLUDING COMBUSTION PRODUCTS): THERMAL DECOMPOSITION CAUSES LIBERATION OF HF AND NH₃. CONTACT WITH OTHER BASES RELEASES NH₃. TOXICITY OF THIS PRODUCT IS DUE TO THE NATURE OF HF.

HAZARDOUS POLYMERIZATION: MAY OCCUR WILL NOT OCCUR

CONDITIONS TO AVOID: MIXING WITH STRONG ACIDS, ALKALIS, AMINES, 2-AMINO ETHANOL, CHLOROSULFURIC ACID, GLASS, METALS, NITROGEN COMPOUNDS, OLEUM, ORGANIC ANHYDRIDES, PROPYLENE OXIDE, VINYL ACETATE.

IX. SPILL, LEAK, AND DISPOSAL PROCEDURES

SPILL RESPONSE PROCEDURES (INCLUDE EMPLOYEE PROTECTION MEASURES): WEAR PROTECTIVE EQUIPMENT. CONTAIN SPILL INTO MARKED CONTAINER FOR RECLAMATION OR DISPOSAL. AVOID DISCHARGE TO SANITARY SEWERS AND BODIES OF WATER.

PREPARING WASTES FOR DISPOSAL (CONTAINER TYPES, NEUTRALIZATION, ETC.): SUBMIT TO AN APPROVED CHEMICAL DISPOSAL SERVICE FOR DISPOSITION IN ACCORDANCE WITH LOCAL GOVERNMENT REGULATIONS.

NOTE: DISPOSE OF ALL WASTES IN ACCORDANCE WITH FEDERAL, STATE AND LOCAL REGULATIONS.

X. SPECIAL HANDLING INFORMATION

VENTILATION AND ENGINEERING CONTROLS: NONE

RESPIRATORY PROTECTION (TYPE): CARTRIDGE MASK, USE CARTRIDGE FOR FORMALDEHYDE CHLORINE, HYDROGEN CHLORINE, SULFUR DIOXIDE MSHA - NIOSH APPROVED TC-23C-741

EYE PROTECTION (TYPE): GOGGLES

GLOVES (SPECIFY MATERIAL): HYDROGEN OR EQUIVALENT GLOVES TO ELBOW.

OTHER CLOTHING AND EQUIPMENT: CHEST WADERS OF RUBBER COAT.

WORK PRACTICES, HYGIENIC PRACTICES: DO NOT USE AROUND OTHER CLEANING COMPOUNDS.

OTHER HANDLING AND STORAGE REQUIREMENTS: KEEP IN COOL AND DRY STORAGE AREA.

PROTECTIVE MEASURES DURING MAINTENANCE OF CONTAMINATED EQUIPMENT:
IX HMIS RATING SYSTEM
HEALTH 2, FLAMMABILITY 0, REACTIVITY 1

FOR TRANSPORTATION EMERGENCY CALL CHEM-TEL AT: 1(800)255-3924

TOXIC FUMES OF OXIDES OF PHOSPHORUS.

UNUSUAL FIRE AND EXPLOSION HAZARDS: NONE

V. HEALTH HAZARD INFORMATION

SYMPTOMS OF OVEREXPOSURE FOR EACH POTENTIAL ROUTE OF EXPOSURE.

INHALED: SEVERE IRRITANT - TCLO (HUMAN)

CONTACT WITH SKIN OR EYES: EYES: SEVERE IRRITANT, CHEMICAL BURNS
LIKELY.
SKIN: CORROSIVE TO TISSUE.

ABSORBED THROUGH SKIN: SLIGHTLY HAZARDOUS. LD50 (RABBIT)

SWALLOWED: SLIGHTLY HAZARDOUS. LD50 (RAT)

HEALTH EFFECTS OR RISKS FROM EXPOSURE. EXPLAIN IN LAY TERMS. ATTACH
EXTRA PAGE IF MORE SPACE IS NEEDED.

ACUTE: IRRITANT, SLIGHTLY TOXIC WHEN INHALED.

CHRONIC: SLIGHTLY TOXIC WITH REPEATED INHALATION OR INGESTION.
CAUSES BURNS TO EXPOSED TISSUE.

FIRST AID: EMERGENCY PROCEDURES

EYE CONTACT: FLUSH WITH COPIOUS WATER FOR AT LEAST 15 MINUTES.
IF IRRITATION PERSISTS, OBTAIN MEDICAL ATTENTION.

2

SKIN CONTACT: WASH OFF WITH WATER. IF IRRITATION PERSISTS, OBTAIN MEDICAL ATTENTION.

INHALED: REMOVE FROM EXPOSURE. IF BREATHING IS DIFFICULT OR DISCOMFORT PERSISTS, OBTAIN MEDICAL ATTENTION.

SWALLOWED: RINSE MOUTH WITH WATER. GIVE COPIOUS WATER TO CAUSE DILUTION IN THE STOMACH. DO NOT INDUCE VOMITING.

SUSPECTED CANCER AGENT?

NO: THIS PRODUCT'S INGREDIENTS ARE NOT FOUND IN THE LISTS BELOW.

YES: FEDERAL OSHA NTP IARC

CALIFORNIA EMPLOYERS USING CAL/OSHA REGULATED CARCINOGENS MUST REGISTER WITH CAL/OSHA. THE CAL/OSHA AND FEDERAL OSHA CARCINOGEN LISTS ARE SIMILAR.

MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE
MODERATELY CORROSIVE AGENT WHICH MAY BURN ANY EXPOSED TISSUES UPON PROLONGED EXPOSURE.

VI. REACTIVITY DATA

STABILITY: STABLE UNSTABLE

CONDITIONS TO AVOID:

INCOMPATIBILITY (MATERIALS TO AVOID): CONTACT WITH ALKALINE MATERIAL AND REACTIVE METALS.

HAZARDOUS DECOMPOSITION PRODUCTS (INCLUDING COMBUSTION PRODUCTS):

HAZARDOUS POLYMERIZATION: MAY OCCUR WILL NOT OCCUR

CONDITIONS TO AVOID:

3

VII. SPILL, LEAK, AND DISPOSAL PROCEDURES

SPILL RESPONSE PROCEDURES (INCLUDE EMPLOYEE PROTECTION MEASURES): SODA ASH AND LIME ARE NEUTRALIZING AGENTS.

PREPARING WASTES FOR DISPOSAL (CONTAINER TYPES, NEUTRALIZATION, ETC.): DISCHARGE INTO A TREATMENT SYSTEM IN ACCORDANCE WITH LOCAL, STATE, AND FEDERAL REGULATIONS.

NOTE: DISPOSE OF ALL WASTES IN ACCORDANCE WITH FEDERAL, STATE AND LOCAL REGULATIONS.

VIII. SPECIAL HANDLING INFORMATION

VENTILATION AND ENGINEERING CONTROLS: ADEQUATE TO MEET MAXIMUM EXPOSURE TO ACID MIST OF 1 MG/CU M. IN 8 HOURS.

RESPIRATORY PROTECTION (TYPE): FOR SEVERE MIST USE NIOSH/MSHA ACID GAS RESPIRATOR.

EYE PROTECTION (TYPE): WEAR CHEMICAL GOGGLES, IF SPLASHING, SPRAY OR MIST CONDITIONS ARE POSSIBLE.

GLOVES (SPECIFY MATERIAL): RUBBER OR NEOPRENE

OTHER CLOTHING AND EQUIPMENT: RUBBER APRON AND BOOTS

WORK PRACTICES, HYGIENIC PRACTICES: PROTECT EYES AND SKIN FROM CONTACT.

OTHER HANDLING AND STORAGE REQUIREMENTS: NONE

PROTECTIVE MEASURES DURING MAINTENANCE OF CONTAMINATED EQUIPMENT: PROTECT EYES AND SKIN FROM CONTACT.

Sierra Chemical Co.

Material Safety Data Sheet

This MSDS has been prepared within the guidelines of the Federal OSHA Hazard Communication Standard, 29CFR 1910.1200.

Product Name: Sierra Sani Chlor / Sierra Pure Chlor / Sierra Bleach

I. GENERAL INFORMATION

Manufacturer:	Sierra Chemical Co.	Emergency Phone:	(800) 424-9300
Address:	2302 Larkin Cr. Sparks, NV 89431	Information Phone:	(775) 358-0888
Date:	12-20-06	CHEMTREC Phone:	(800) 424-9300
Supersedes:	9-23-05		

II. PRODUCT IDENTIFICATION

Proper Shipping Name:	Hypochlorite Solution	Chemical Formula:	NaOCl
Synonyms/Common Names:	Liquid Bleach, Liquid Chlorine	Chemical Family:	Acid Salts, Oxidizers
CAS Number:	7681-52-9		

III. PHYSICAL DATA

Appearance and Odor: Light greenish-yellow liquid, chlorine-like odor.	
Boiling Point: Decomposes on heating	Vapor Pressure @ 25° C: No data
Water Solubility: Miscible	Specific Gravity: 1.08 - 1.26
pH @ 25°C: 11.5 (approximately)	Molecular Weight: 75.45 (NaOCl Active ingredient)

IV. INGREDIENTS/IDENTITY INFORMATION

Component	CAS No.	OSHA PEL/TLV	%
Sodium Hypochlorite	7681-52-9	Not Established	5-15
Sodium Chloride	7647-14-5		5-11
Sodium Hydroxide	1310-73-2	2 mg/m ³	.5-2.0
Water	7732-18-5		Balance

**V. FIRE AND EXPLOSION DATA**

Flash Point: N/A Auto-ignition Temperature: N/A LEL: N/A UEL: N/A

Extinguishing Media: Use any media appropriate for surrounding fire. Use water to cool containers exposed to fire.

Special Fire Fighting Procedures: Wear NIOSH approved self-contained breathing apparatus (SCBA) and protective clothing to prevent direct contact with the material (to include, but not limited to; boots, gloves, hard hat and impervious clothing).

Unusual Fire and Explosion Hazards: None

VI. STABILITY/REACTIVITY DATA

Stability: Unstable Stable

Hazardous Polymerization: May Occur Will Not Occur

Conditions to Avoid: High temperatures, sunlight and ultraviolet light. Decomposition will result from contact with iron and copper. Do not store at temperatures above 60-70o F (15-21o C). This product has a shelf life of up to 6 months at 60o F or lower.

Incompatibility: This product is incompatible with iron, copper, acids, ammonium compounds, organics and other oxidizers. It will react violently with phenyl acetonitrile, cellulose and ethylene.

Hazardous Decomposition or Byproducts: Produces toxic chlorine gas upon contact with acids.

VII. TOXICOLOGICAL INFORMATION/HEALTH HAZARD DATA

This product is harmful if inhaled or ingested and is harmful if contacted by the skin or eyes. The reported threshold for odor is approximately 0.9 mg/m³ based on the odor of chlorine. Symptoms which may be aggravated by exposure are asthma, respiratory and cardiovascular disease.

Eye Contact: Contact with eyes will cause irritation. It may also cause burns to the eyes or impairment of vision and corneal damage.

Skin Contact: Contact with skin can cause burns and/or irritation. Symptoms of contact are redness, swelling and scab formation of contacted area. If prolong exposure occurs, it can cause damage to the secondary tissue resulting in the inability of regeneration to the affected area.

Inhalation: Sodium Hypochlorite when inhaled is irritating to the nose, mouth, throat, and lungs. Burns to the respiratory tract may occur with production of lung edema which could result in shortness of breath, wheezing, choking, chest pain, and impairment of lung function. High concentrations can result in permanent lung damage. Repeated exposure can cause impairment of lung function and permanent lung damage.

Ingestion: Irritation and/or burns can occur to the entire gastro-intestinal tract. Symptoms are characterized by nausea, vomiting, diarrhea, abdominal pain, bleeding, and/or tissue ulceration.

Exposure Limit Information: There is no established PEL for sodium hypochlorite. The Federal OSHA Permissible Exposure Limit (PEL) for sodium hydroxide is 2 mg/m³.

VIII. EMERGENCY AND FIRST AID

If a known exposure occurs or if poisoning is suspected, do not wait for symptoms to develop. Immediately initiate the recommended procedures below. Simultaneously contact a Poison Control Center, a physician or the nearest hospital. Inform the person contacted of the type and extent of exposure, describe the victim's symptoms and follow the advice given. For additional information call, CHEMTREC (800) 424-9300.

Eye Contact: Immediately flush the eyes with large quantities of running water for a minimum of 15 minutes. Hold the eyelids apart during the flushing to ensure rinsing of the entire surface of the eye and lids with water. Do not attempt to neutralize with chemical agents. Obtain medical attention as soon as possible. Oils or ointments should not be used. Continue the flushing for an additional 15 minutes if the physician is not immediately available.

Skin Contact: Immediately remove contaminated clothing and shoes under a safety shower. Flush all affected areas with large amount of water for at least 15 minutes. Do NOT attempt to neutralize with chemical agents. Obtain medical attention as soon as possible.

Inhalation: Nausea, headaches and dizziness are signs that a person should stop working and be taken to fresh air immediately until symptoms are gone. Should breathing become difficult, give oxygen. Keep the person warm, resting and contact a physician. A person could inhale enough vapor to lose consciousness. This person should be moved to fresh air. Call a physician immediately. If breathing stops, artificial respiration should be given immediately. In all cases, ensure adequate ventilation and provide respiratory protection before returning to work.

Ingestion: Do NOT induce vomiting. Immediately give large quantities of water. If vomiting does occur, give fluids again. Do not induce vomiting or give anything by mouth to an unconscious person. Call a physician or the nearest Poison Control Center immediately.

IX. PROTECTIVE EQUIPMENT REQUIREMENTS

Ventilation Requirements: Local exhaust ventilation if vapors, mists, or aerosols are present. If these are not present use general exhaust ventilation.

Respiratory Requirements: Due to low volatility and toxicity, a respirator is not normally needed. However, if vapors, mists, or aerosols are generated, wear a NIOSH/MSHA approved respirator.

Additional Protective Clothing: Use chemical safety goggles and impermeable gloves. Use rubber apron to protect body from splashing conditions.

Other: Safety shower and eye-wash station recommended.

X. HANDLING AND STORAGE

Normal Handling: Store in vented, closed, clean, non-corrosive containers in a cool, dry, well ventilated location, away from direct sunlight and from chemicals which may react with the bleach if spillage occurs. If closed containers become heated, the containers should be vented to release decomposition product. Do not mix or contaminate with ammonia, hydrocarbon, acids, alcohol's, ethers.

Do not store at temperatures above 60-70°F (15-21°). This product has a shelf life of up to six months at 60°F or lower. DO NOT package in metal containers.

Sodium Hypochlorite Dec 04

Material Release or Spills: Always wear personal protective equipment including, but not limited to; boots gloves and impervious clothing. If hazardous concentrations are found in the local spill area, use a NIOSH/MSHA approved respirator. Vapors may be suppressed by the use of a water fog and all water runoff should be captured for treatment and disposal. Dike or contain spill by using a compatible absorbent such as sand, clay, soil or commercial absorbents.

XI. SPILL OR LEAK HANDLING

IN CASE OF AN EMERGENCY, CALL CHEMTREC (800) 424-9300

Any person responding to a spill or leak should use a NIOSH/MSHA approved respirator. Additional protective clothing must be worn to prevent direct contact with the material. This includes (but is not limited to) boots, gloves, hard hat, and impervious clothing. Compatible materials are neoprene, butyl rubber, viton, and saranex.

Hazardous concentrations may be found in the local spill area and immediately downwind. Vapors may be suppressed by the use of a water fog and all water run off should be captured for treatment and disposal. Dike or contain by using a compatible absorbent such as sand, clay, soil, commercial absorbents. Use vacuum or pump operation to remove if a water release and threat before disposal. Dispose of spill residues per guidelines in Section "XII Disposal" of this MSDS.

XII. ENVIRONMENTAL-REGULATORY STATUS/DISPOSAL

The user of this material has the responsibility to dispose of unused material, residues and containers in compliance with all relevant local, state and federal laws and regulations regarding treatment, storage and disposal for hazardous and non-hazardous wastes.

EPA Hazardous Substance Status: Reportable Quantity (RQ) = 100 lbs. NOTICE: this product contains chlorine which is listed in the Toxic Substance Control Act (TSCA) and is subject to reporting requirements of EPCRA Section 313.

RCRA Status of Unused Material if Discarded: Not a hazardous waste. As a non-hazardous waste, this material should be disposed of in accordance with Federal, State and local regulations by treatment in a wastewater treatment system.

XIII. TRANSPORTATION DATA

DOT Proper Shipping Name: Hypochlorite Solution

Hazard Class: 8 **UN I.D. Number:** UN1791 **PACKING GROUP:** III

Reportable Quantity: 100 lbs. (80 Gallons 12.5% Solution)

XIV. ADDITIONAL INFORMATION

All information is offered in good faith, without guarantee or obligation for the accuracy or sufficiency thereof, or the results obtained, and is accepted at user's risk. The uses referred to are for the purpose of illustration only. User should investigate and establish the suitability of such use(s) in every case. Nothing herein shall be construed as a recommendation for uses which infringe valid patents or as extending license under valid patents.

3. HAZARDS IDENTIFICATION**Potential Health Effects****Eye**

Can cause permanent eye injury. Symptoms include stinging, tearing, redness, and swelling of eyes. Can injure the cornea and cause blindness.

Skin

Can cause permanent skin damage. Symptoms may include redness, burning, and swelling of skin, burns, and other skin damage. The feeling of irritation or pain may not occur until several hours after the exposure. Additional symptoms of skin contact may include: hair loss, Passage of this material into the body through the skin is possible, but it is unlikely that this would result in harmful effects during safe handling and use.

Swallowing

Swallowing this material may be harmful or fatal. Symptoms may include severe stomach and intestinal irritation (nausea, vomiting, diarrhea), abdominal pain, and vomiting of blood. Swallowing this material may cause burns and destroy tissue in the mouth, throat, and digestive tract. Low blood pressure and shock may occur as a result of severe tissue injury.

Inhalation

It is possible to breathe this material under certain conditions of handling and use (for example, during heating, spraying, or stirring). This material is a dust or may produce dust. Breathing this material may be harmful or fatal. Symptoms may include severe irritation and burns to the nose, throat, and respiratory tract. Symptoms usually occur at air concentrations higher than the recommended exposure limits (See Section 8).

Symptoms of Exposure

Signs and symptoms of exposure to this material through breathing, swallowing, and/or passage of the material through the skin may include: irritation (nose, throat, airways), cough, difficult breathing, lung edema (fluid buildup in the lung tissue), lung damage, damage to the mouth, throat, and/or airways, shock.

Target Organ Effects

No data

Developmental Information

Based on the available information, risk to the fetus from maternal exposure to this material cannot be assessed.

Cancer Information

There is no information available. The chance of this material causing cancer is unknown. This material is not listed as a carcinogen by the International Agency for Research on Cancer, the National Toxicology Program, or the Occupational Safety and Health Administration.

Other Health Effects

No data

Primary Route(s) of Entry

Inhalation, Skin absorption, Skin contact, Eye contact, Ingestion.

4. FIRST AID MEASURES**Eyes**

If material gets into the eyes, immediately flush eyes gently with water for at least 15 minutes while holding eyelids apart. If symptoms develop as a result of vapor exposure, immediately move individual away from exposure and into fresh air before flushing as recommended above. Seek immediate medical attention. Do not remove the victim from water access for transport to a medical facility unless instructed to do so by qualified medical personnel. If possible, continue flushing the eye gently with water while transporting the victim.

Skin

Immediately flush skin with water for at least 15 minutes while removing contaminated clothing and shoes. Seek immediate medical attention. Wash clothing before reuse and discard contaminated shoes.

Swallowing

Seek immediate medical attention. Do not induce vomiting. Vomiting will cause further damage to the mouth and throat. If individual is conscious and alert, immediately rinse mouth with water and give milk or water to drink. If possible, do not leave individual unattended.

Inhalation

If symptoms develop, immediately move individual away from exposure and into fresh air. Seek immediate medical attention; keep person warm and quiet. If person is not breathing, begin artificial respiration. If breathing is difficult, administer oxygen.

Fire Fighting Instructions

Wear a self-contained breathing apparatus with a full facepiece operated in the positive pressure demand mode with appropriate turn-out gear and chemical resistant personal protective equipment. Refer to the personal protective equipment section of this MSDS.

NFPA Rating

Health - 3, Flammability - 0, Reactivity - 1

6. ACCIDENTAL RELEASE MEASURES**Small Spill**

Sweep up material for disposal or recovery.

Large Spill

Prevent run-off to sewers, streams or other bodies of water. If run-off occurs, notify proper authorities as required, that a spill has occurred. Persons not wearing protective equipment should be excluded from area of spill until clean-up is completed. Stop spill at source. Dike to prevent spreading. Pump to salvage tank. Use protective clothing and devices as required. Stop spill at source. Scoop or vacuum transfer spilled product to clean containers for recovery. Sweep up unrecoverable product. Transfer sweepings, contaminated soil, and other materials to containers for disposal.

7. HANDLING AND STORAGE**Handling**

Containers of this material may be hazardous when emptied. Since emptied containers retain product residues (vapor, liquid, and/or solid), all hazard precautions given in the data sheet must be observed. All five-gallon pails and larger metal containers, including tank cars and tank trucks, should be

Re: Sozinho Dairy

After reviewing our records, the Sozinho Dairy has maintained a positive working relationship with the Kings Mosquito Abatement District to reduce mosquito larvae production. Therefore all variances to existing pond dimensions and access lanes are permissible under the Kings Mosquito Abatement District's guidelines. However the owner shall continue to assume responsibility to control mosquito breeding and larvae production. In addition the owner shall keep the storage lagoons and access lanes well maintained: free from weeds and not blocked by equipment, debris, or any other material.

Sincerely,

Steven F. Gilles

Dairy Dead Animal Service Letter – Baker Commodities

Kings County Emergency Action Plan for Dead Animal
Management

Dead Animal Management Plan Records Form

Date: 07/21/08

Re: Dead Stock Removal Service

To whom it may concern:

Baker Commodities Inc. will provide dead stock removal service, upon request, for Sozinho dairies located at 11447 81/2 Ave. In Kings County. Baker Commodities Inc. will remove animals from the site as soon as is practicable barring emergencies or breakdowns restricting our capability to process dead stock.

Sincerely,

Doug Fletcher

Hanford Plant Manager
Baker Commodities Inc.
Kerman Division

EMERGENCY ACTION PLAN

FOR
DEAD ANIMAL
MANAGEMENT

Date Prepared: April 30, 2007

DEAD ANIMAL MANAGEMENT POLICY

BACKGROUND:

During the heat wave encountered in the summer of 2006, it became apparent that the current dead animal management system for the three county areas (Kings, Tulare and Fresno) was operating at or near capacity. When excess load is introduced into the system, or there is processing equipment failure, the system cannot remove bovine carcasses within the required 72 hour time frame as required by the *Dairy Element* of the *Kings County General Plan*. There were no approved backup or alternate systems in place, except emergency procedures, to respond to system failures. Other animal based agri-business may also be affected during natural disasters which could further add to the accumulation of animal carcasses requiring proper disposal. An alternative procedure is necessary to ensure that the public health and safety is protected, and that the dairy, poultry, swine and goat economies remains healthy. During a significant disease outbreak or natural disaster, it is important to have as many disposal options as possible.

CURRENT PROGRAM REQUIREMENTS:

The *Dairy Element* of the *Kings County General Plan* provides the requirements for the management of dead animals on dairies and associated calf/heifer facilities. The *Dairy Element* states:

Policy DE 4.1d: *Dead Animals Management Plan (DAMP)* – A Dead Animal Management Plan (see Component 5 of Appendix J) shall be prepared and implemented for the disposal of all dead animals in a way that does not adversely affect groundwater or surface water, create public health concerns, or cause nuisances due to odor or vectors. The plan shall specify at a minimum that dead animals shall be removed from the dairy within 72 hours. Carcasses shall be stored in an area screened from public view and accessible via an all weather road or driveway. No animals shall be buried on site unless by order of an officer of a regulatory agency with jurisdiction over dead animal management, including, but not limited to, the County Agricultural Commissioner, the County Health Officer, and State and Federal Agencies.

Since rendering is the most common method used to dispose of dead animals, a plan for the timely delivery of dead stock to appropriately permitted facilities that will process the dead stock will adequately serve as the *Dead Animal Management Plan (DAMP)*.

(Mitigation for Impact 4.3-5)

Appendix J of the *Dairy Element* states:

5. **Dead Animal Management Plan (DAMP) (Policy DE 4.1d):**

The *Dead Animal Management Plan (DAMP)* is a part of the *Technical Report* submitted with each application to either establish a new dairy or expand an existing dairy. The DAMP shall include a program of removing dead animals from the site within 72 hours, or by the end of the first working day after a holiday weekend. Burial or otherwise disposing of the carcasses on site shall not be allowed unless by order of the Health Officer, Agricultural Commissioner, or other authority authorized to make such an order.

Record keeping for the DAMP shall be documented and the records shall be kept at the dairy site. The documentation shall include the number of dead animals by date; the date and method of their removal, and location where the dead animals were taken when removed from the dairy site. The documentation shall be made available to Code Compliance personnel upon their request.

Policy DE 4.1d states that a plan for the timely delivery to an appropriately permitted facility that will process the dead animals is adequate. However, none of the permit applications have included a contingency plan for situations when their primary method of carcass disposal is not available. Due to

the recent inability of Baker Commodities to meet their contractual obligations and accept drop-off clients, an alternative or back up method needs to be identified in all future applications for dairies.

OPTIONS:

1. Currently, there are no other businesses providing this service in Kings County. If a second company opened here, that could be the back-up plan.
2. Solid waste disposal is an option if the designated landfill's permit includes disposal of large animal carcasses. The only landfill in Kings County with such a permit is the Chemical Waste Management, Kettleman Hills Facility. CWM will not accept drop-off business, and does not collect carcasses from individual dairies after 8/31/2006. A central collection point would be required.
3. **On an emergency basis only and at the direction of the County of Kings**, on-site composting and on-site burial may be allowed.

According to the California Environmental Protection Agency the prescribed hierarchy is established as follows for emergency animal disposal:

- Temporary storage of carcasses for transport to rendering.
- Disposal at permitted solid waste landfills.
- On-site composting
- On-site burial

PROBLEM

Even if the new permits are issued with the revised requirement for a contingency or alternate plan for disposal of carcasses, that will not resolve the problem for the existing dairies which are not under the Dairy Element regulations or were permitted under the Dairy Element, but only identify the use of Baker Commodities as the Dead Animal Management Plan. Any solution to this issue will require options for existing dairies.

All animal facility owners and operators are required to consider measures that could be taken prior to an imminent emergency that could reduce the impact on the facility and the environment. This Emergency Action Plan is intended to act as a guideline for the facility owner/operator to accomplish that goal.

Other, more restrictive rules relating to dead animal management may be in effect at any given time. Please refer to the County Website at www.countyofkings.com for additional information. Information in this plan will be updated as necessary and reviewed annually to take advantage of new technology and methods as they become available.

MORTALITY INTERVENTION TEAM

A Mortality Intervention Team established by Kings County and supervised by Kings County Agriculture Commissioner will respond to emergency requests from property owners or animal facility operators to provide technical assistance in the proper disposal of animal carcasses in an emergency situation. The team is comprised of 6-8 individuals, trained in the proper methods of composting and burial and is available upon request to provide on-site assistance as needed.

Property owners or animal facility operators are required to have available on-site, all necessary equipment, materials and labor in order to properly implement the recommendations of the Mortality Intervention Team. The property owner or facility operators must also ensure that land is identified and set aside in advance for the emergency disposal of animal carcasses.

Timely notification of the Mortality Intervention Team by the property owner or facility operator will limit the necessity of moving dead animals on County roadways.

STANDARD REQUIREMENTS FOR OFF-SITE BURIAL

Chemical Waste Management Facility:

This option may be available in instances of catastrophic events involving the death of numerous animals when the rendering plant is unable to process the carcasses in a timely manner. An emergency situation must be declared by the County of Kings if it exceeds Chemical Waste Management's permitted daily tonnage.

Landfilling of carcasses has not been a routine practice, but it does provide several advantages including environmental protection and speed of disposal in an emergency situation when rendering is overwhelmed or on-farm disposal is not possible. A landfill must first agree to accept carcasses. This will depend on a wide variety of factors including the nature of the mortality (infectious or not), the ability of the landfill to accept the waste without disruption to existing operations, the requirements of their solid waste permit, the financial incentive and the political and public perception factors.

For off-site disposal, the primary concern is carcass transport in a safe, sanitary and timely fashion, while not endangering public health.

- The carcasses must be hauled to the landfill in trucks that prevent leakage of carcass fluids on the roadway.
- The carcasses must be screened from public view during transportation to the landfill.

STANDARD REQUIREMENTS FOR EMERGENCY ON-SITE COMPOSTING

Currently California regulations prohibit the composting of mammalian flesh, organs, unprocessed hide, blood, bone and marrow, absent a declaration of emergency (Title 14, California Code of Regulations, Section 17852(i)).

Composting is a natural process, enhanced and accelerated by the mixing of organic waste with other ingredients in a prescribed manner for optimum microbial growth and aerobic decomposition. Composting transforms a waste product (manure and dead animals) into a useful soil amendment.

The process involves layering a prescribed weight or number of carcasses into straw, corn stalks, manure solids or other source of carbon with adequate moisture and oxygen. Within a matter of months, soft tissue is completely decomposed and all that is left are large bones. The residual composted “soil” becomes fertilizer for land application to crops. Studies have shown that properly composted carcasses do not pose a significant threat to air or water quality.

Composting can be difficult to manage and can result in objectionable odors. Supervision of the composting process by a knowledgeable person is necessary to ensure completed decomposition and a stable composted material.

This method applies only to animals that died on-site (no off-site transportation). On-site composting should only be attempted if the owner or dairy operator has the specific knowledge required to correctly carry out the process. **Contact the Kings County Agricultural Commissioner/ Mortality Intervention Team for specific details.**

STANDARD REQUIREMENTS FOR EMERGENCY ON-SITE BURIAL

The property owner is responsible for burial in a timely and sanitary manner so as not to become a nuisance on-site or to neighbors, to prevent the spread of disease to other cattle or wildlife and to protect public health and safety. An emergency situation must be declared.

Location and site consideration of proposed burial site:

- In determining the location of the potential burial site(s), consult the soil data available at <http://websoilsurvey.nrcs.usda.gov> to determine if burial of animals would be allowed per United States Department of Agriculture, Natural Resources Conservation Service (USDA/NRCS).
- Dead animal carcasses shall not be buried in a floodway or flood zone.
- Each burial site shall be located a minimum of 100 feet from any well, watercourses and water bodies.
- Burial trenches and pits must have at least a five (5) foot separation above highest groundwater level.

- Each burial site shall be located a minimum of 25 feet from any structure, property line or major cut or embankment.
- Each burial site shall be located a minimum of 0.25 miles from any park, road or highway.
- Burial of carcasses should only be deep enough to cover the top of the carcass with 4-6 feet of compacted soil to prohibit exhumation from feral animals (dogs, coyotes, etc).
- CALL BEFORE YOU DIG. Call 1-800-227-2600 if you are unsure if the proposed burial area might contain underground utilities.

Burial guidelines:

- Burial should be within a reasonable time period, i.e. 24-48 hours after death.
- Carcasses must be covered daily as to reduce vectors (dogs, rats, snakes, flies, etc) in and around the trench or pit.
- The pits or trenches should be surrounded by a berm to divert rainfall and runoff from the site.
- When the burial pit is full, the site should be capped with a 2 foot mound of soil so that precipitation is not allowed to collect in the pit.
- The burial site should be monitored so that these conditions remain after settling of decomposing carcasses and capping material.
- A record of the location of the burial site, the burial history of each burial site to include the date, species, head count and age should be kept by the owner and made available on request to the Kings County Environmental Health Division, Agricultural Commissioner or the Kings County Code Enforcement Division.

Environmental Impacts: The proposed burial site shall not be within an area where known cultural, historical, archeological or paleontological resources are present or suspected. The property owner/facility operator must contact the California Historical Resources Information System (CHRIS) and the Native American Heritage Commission (NAHC) in advance to determine if a review of their records indicates known cultural resources in or near the proposed burial site.

Policy DE 3.1e of the *Dairy Element of the Kings County General Plan* states that;

If any potential historical, archeological or paleontological resources are encountered during burial excavation, work in the vicinity of the find shall be suspended or diverted. The property owner/facility operator shall retain a qualified archeologist to perform an assessment of the resource. Depending on the nature of any such find, evaluation may include determination of site boundaries and assessment of site integrity and significance. Standards for the site evaluation shall comply with appropriate State and Federal requirements (including California Public Resources Code Section 21083.2i)). Evaluation shall include, if necessary, site mapping and/or limited subsurface testing using standard archeological methods in accordance with CEQA Guidelines Section 15064.5. If, after evaluation, the qualified archeologist judges an historical, archeological or paleontological resource to be of importance, a mitigation plan shall be prepared in accordance with appropriate guidelines and submitted to the Zoning Administrator. Mitigation could include avoidance, site capping, data recovery, or a combination of these or other measures, as determined by the qualified

archeologist or paleontologist. Consultation with representatives of recognized local Native American groups shall be reflected in the development of any mitigation plan affecting Native American cultural resources.

INDIVIDUAL FACILITY INVENTORY OF AVAILABLE
RESOURCES

Animal facility owner/operators should use this form as an inventory tool to document the assets available to the facility in the event of a declared emergency. Once completed, maintain this form on-site.

Number of available trucks: Two

Type of truck: 1 Dump Truck, 1 Water Truck

Capacity of trucks: 30 cu. Yd. capacity (dump) / 3000 gallon (water).

Backhoe or other digging equipment: Two each: 2 1/2 cubic yard front end loaders.

Materials: Lime, Straw, Manure, tarps, rope, etc,
Straw, manure, silage, & water for composting.
Tarps, ropes, lime for transport and burial.

Other: One ton bales of hay for constructing barriers for composting.

TRANSPORTATION OF DEAD ANIMALS

Transportation routes: (Depending on severity of emergency) *1) North on 8 1/2 av, Right on Hanford-Armona Rd. to Baker Commodities Hanford yard, 7480 Hanford-Armona Road, Hanford CA. (1.5 mi) *2) North on 8 1/2 av, Right on Hanford-Armona Rd, Left on Highway 43, left on Mountain View Ave, Right on S. Henderson Rd., Left on W. Manning Ave, Right on Highway 145, Left on Jensen Av, to Baker Commodities Kerman facility, 16801 Jensen Ave, Kerman, CA (54 mi) *3) North on 8 1/2 av, Right on Hanford-Armona Rd, Right on Highway 43, Right on Kansas Ave, Left on Highway 41, Right on Old Skyline Blvd. to Chemical Waste Mgmt. Landfill, 35251 Old Skyline Blvd, Kettleman Clty, CA. (42.5 mi)

Type of Vehicle used: _____

LOCATION OF LAND AVAILABLE AND RECORD OF COMPOSTING/BURIAL

Address: West side of 9th Ave, between Houston and Hanford-Armona

APN: 016-140-084

Estimated Capacity (# of animals) of site: 2,000

Date of Carcass Disposal: If an emergency is declared

Number and type of animal Disposed of: None yet; (Holstein Cattle)

Provide a site plan showing the exact location(s) of the proposed composting and/or burial sites. This site plan shall be made available to Kings County Planning Agency upon request.

Reconnaissance Level Biological Survey

NOTE: A Reconnaissance Level Biological Survey for the subject site was prepared by Vollmar Consulting (VC). At the time, the survey covered both Sozinho Dairy #1 and Sozinho Dairy 3. The present CUP application is for a combined Sozinho Dairy composed of both the former Sozinho Dairy #1 and the former Sozinho Dairy 3. The acres of the site have been reduced since some fields believed to be available at the time have since turned out not to be available for manure application. These changes in no way detract from the validity of the Biological Survey. A copy of this Reconnaissance Level Biological survey is presented in Attachment 6.

1.0 INTRODUCTION

This report summarizes the methods and results of a reconnaissance-level biological evaluation of Sozinho Dairies #1 and #3 (project site) located in an unincorporated area of Kings County, just south-southeast of the city of Hanford (Figures 1 and 2). These dairies are contiguous to each another and are shown as a single project site on Figures 1 and 2. The owner of these dairies is in the process of obtaining County permits to expand existing dairy operations through an increase in the number of animals and possible construction of addition animal shades and other facilities.

This evaluation was conducted to check for the presence of wetlands or sensitive species habitat on the project site as required by the Dairy Element of the Kings County General Plan. Specific policies within the Element that address biological survey requirements and avoidance of impacts to wetlands or sensitive species habitat are as follows:

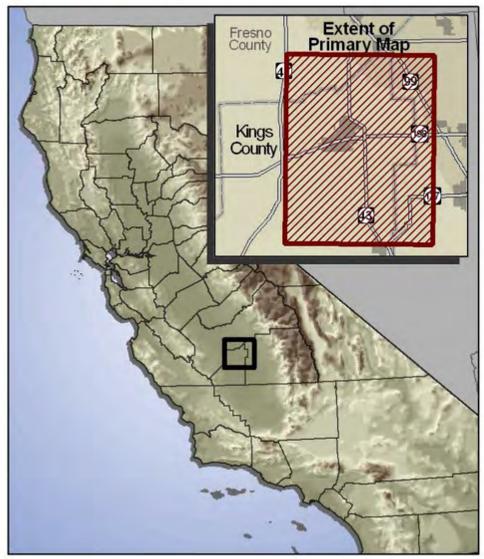

- Policy DE 1.2e: Except as allowed by the conditional use permit, new or expanding dairy facilities shall not locate on wetlands or habitat for sensitive species. Where a survey identifies the presence of wetlands or habitat for sensitive species, a conditional use permit and additional environmental review will be required before any new dairy development or expansion may occur.
- Policy DE 3.3a: It is the policy of the County, for the purposes of siting dairies under this Element, that land continuously cultivated since 1985, or before, will not be considered wetlands or sensitive habitat. Temporarily fallow land which otherwise meets this requirement shall not be considered to be habitat for sensitive species simply because it is not being cultivated at the time. All applications for new or expanded dairies must submit a *Biological Resources Survey*. The survey shall be conducted in compliance with the U.S. Fish and Wildlife Service (USFWS), California Department of Fish and Game (CDFG), and U.S. Army Corps of Engineers (USACE) guidelines, where applicable. If the survey identifies impacts on wetlands or habitat for sensitive species, then the applicant will not be eligible to obtain SPR approval by the Zoning Administration and will instead complete a conditional use permit (CUP) process and additional environmental reviews.
- Policy DE 3.3a, Section 6: The results of a *Biological Resources Survey* shall be made part of the *Technical Report* submitted with each application to either establish a new dairy or expand an existing dairy. The survey of habitat for sensitive species and wetlands shall be conducted by a qualified wildlife biologist prior to initiation of grading for each dairy facility to confirm the presence or absence of any nesting activity at each location. If habitat for sensitive species or wetlands is found, appropriate measures shall be taken to avoid destruction of active dens or nests. An appropriate buffer zone shall be established around any active den or nest based on consultation with CDFG. Construction activities shall be restricted in this zone until the qualified biologist has determined that the young animals are no longer using the dens or nests. Passive relocation methods shall be used by the qualified biologist in the event that removal of any wildlife from the impact area is deemed necessary by a regulatory agency with appropriate jurisdiction.

2.0 METHODS

2.1 Preliminary Review

Prior to conducting the field survey, we obtained a high-quality aerial photograph and developed both a vicinity and site map for use during the field survey (Figures 1 and 2). We also developed a target list of sensitive species with potential to occur in the project vicinity and included occurrences documented in the California Natural Diversity Data Base (CNDDDB 2008) on the vicinity and site maps. For the purposes of this report, the term “sensitive species” refers to species that are:

- Listed under the provisions of either the Federal or State Endangered Species Act (50 CFR 17.12 and 14 CCR 670.5, respectively);
- Recognized as species of concern by the U.S. Fish and Wildlife Service or species of special concern by the California Department of Fish and Game;
- Listed as rare, endangered, or species of concern by the California Native Plant Society (CNPS) (Lists 1-4);
- Species that meet the definition of rare, threatened, or endangered under CEQA (State CEQA Guidelines, Section 15380).

2.2 Reconnaissance Site Visit

Mr. John Vollmar of Vollmar Consulting conducted a one-day reconnaissance-level site visit on August 7, 2008 to assess existing conditions on and adjacent to the project site and to determine potential impacts the proposed project might have on wetlands or sensitive species habitat. Mr. Vollmar conducted the survey by driving around the project site, stopping occasionally to walk portions of the project site, and taking notes on observed conditions.

3.0 RESULTS

3.1 Existing Site Conditions

The project site is located south-southeast of the city of Hanford in Kings County, California (Figure 1). It is just west of Highway 43 (Central Valley Highway), south of Hanford-Armona Road, and north of Houston Avenue (Figure 2). The entire site is approximately 484 acres in total area and consists of existing dairy facilities situated in the central east of the project site and associated crop fields adjacent and to the west of the dairy facilities. The dairy facilities include milking facilities, animal shades, confinement pastures and manure lagoons. The crop fields are primarily used for growing corn used to feed the animals though there are two fields currently planted with almonds (Figure 2). All crop fields were being actively farmed at the time of the survey and the corn was mature and a few weeks from harvest.

No native or naturalized habitats occur anywhere within the project site. Nearly all surrounding lands are also developed as farms or crop fields and do not support any native or naturalized habitats. There are occasional stands of eucalyptus trees (*Eucalyptus globulus*) and a few valley oaks (*Quercus lobata*) adjacent to but not on the project site.

Lakeside Ditch runs along the western edge of the site and bisects the southwest-most corn field on the site. The ditch is used to transport and deliver irrigation water to local farms.

3.2 Potential Impacts to Wetlands or Other Sensitive Habitats

There are no native habitats, wetlands, or any other sensitive habitats on the project site. The entire project site, as well as all areas immediately surrounding site, have been developed as dairy facilities or crop fields used to grow corn, almonds and other crops. Any construction of new dairy shades would occur within currently farmed corn fields or almond orchards or within open areas within the area designated as 'dairy facilities' on Figure 2. No new or changed farming practices will be conducted within the fields adjacent to Lakeside Ditch.

3.3 Potential Impacts to Sensitive Species

Table 1 is a list of the sensitive species known from the project vicinity. Figure 2 shows the locations of documented occurrences of these species within 10-15 miles of the project site.

Since there are no native or naturalized habitats on the site, there is very low potential for sensitive species to occur. As described above, the dairy facilities consist of a mix of buildings, shades, confinement pastures, and manure lagoons that area actively used as part of the dairy operation. The remainder of the site consists of actively farmed corn fields or almond orchards. There are no vernal pools, grasslands, alkali scrub, or seasonal or perennial marsh or pond habitats and so no potential habitat for the sensitive species associated with these habitats occurs on the site.

The only semi-naturalized areas on the site that could be used as sensitive species habitat are the less frequently disturbed edges of dirt roads and farm fields that could support small mammal burrows and thus provide potential burrow sites for western burrowing owl (*Athene cunicularia hypugea*). However, no California ground squirrels (*Spermophilus beechyi*) or western burrowing owls were observed during the field surveys though a thorough survey was not conducted. The almond orchards and roads could provide movement corridors for San Joaquin kit fox (*Vulpes macrotis mutica*) traveling through the area though it is unlikely they would establish dens on the site given the high level of disturbance from active farming. Also, it is unlikely they would occur on the site given the general lack of suitable or preferred foraging or denning habitat on or adjacent to the site. While there are no large trees on the site, there are scattered stands of tall eucalyptus trees and occasional valley oaks that could be used as nesting sites by Swainson's hawks (*Buteo swainsonii*) and other raptors. Hoary bats (*Lasiurus cinereus*) could also use these trees for roosting. However, the project site does not generally provide foraging habitat for Swainson's hawks since they generally utilize open areas for foraging and generally do not forage within corn fields or almond orchards. No nests of Swainson's hawks or any other raptors were observed during the field survey though the survey was conducted at a time when nesting raptors would be difficult to observe.

Table 1. Sensitive wildlife and plant species documented in the vicinity of Sozinho Dairies #1 and #3, Kings County, CA.

 California Native Plant Society (CNPS) Lists: List 1A = species presumed to be extinct; List 1B = species considered rare, threatened, or endangered in California and elsewhere; List 2: species rare or threatened in California but more common elsewhere; List 3: species about which more information is needed to make a determination regarding rarity; List 4 = watch list, species uncommon but not currently threatened or endangered.

4.0 SUMMARY AND RECOMMENDATIONS

The proposed project, involving an expansion of the currently permitted number of animals and potential future construction of additional animal shades and other facilities, is not expected to cause any impacts to wetlands, other sensitive habitats or habitat for sensitive species. The proposed activities may result in the conversion of existing corn fields or almond orchards to additional animal confinement areas or shades. Conversion of these habitats will not result in the loss of habitat for sensitive species.

Construction on new animal shades could cause indirect impacts to nesting raptors should any occur within ¼ mile of active nesting sites. Active nests could occur in tall trees in the project vicinity including eucalyptus and valley oaks. Prior to construction of any new shades or other facilities, an assessment should be made by a qualified biologist to determine if there are any suitable nesting trees within ¼ mile of the construction site and to check for nesting raptors if any suitable trees occur. Surveys only need to be conducted if construction is proposed during the nesting season (March – July). No surveys are required if construction is conducted outside of the nesting season.

No other additional biological surveys are recommended.

MEMORANDUM

To: Jeffrey Fleming, Western Dairy Design Associates, Inc.

Date: 10/30/09

From: John Vollmar, Vollmar Consulting

No. Pages: 1

Subject: Re-evaluation of Potential Impacts to Sensitive Biological Resources from Proposed Sozinho Dairy Expansion Project

Vollmar Consulting prepared a report for Western Dairy Design Associates, Inc. entitled 'Reconnaissance-level Biological Evaluation of Sozinho Dairies #1 and #3, Kings County, California'. The report, dated August 12, 2008, evaluated potential impacts to sensitive biological resources from the proposed expansion of the dairy and possible construction of additional animal shades and other facilities. The report concluded that the proposed expansion was 'not expected to cause any impacts to wetlands, other sensitive habitats or habitat for sensitive species'.

At the time of the evaluation, Vollmar Consulting was unaware that an unpermitted expansion of the dairy facility had already occurred that involved the construction of additional animal shades and other related facilities. Also, the application includes some proposed additional construction not identified at the time of our evaluation. The details of the unauthorized and new proposed expansion construction are described in the letter that you provided me.

As your letter states and as is shown in the aerial photos attached to your letter, the unauthorized expansion occurred in the vicinity of existing facilities. Based on the findings of our original evaluation, neither the unauthorized expansion nor the additional proposed construction will cause any impacts to sensitive biological resources and the 'Summary and Recommendations' included in my original report apply to the past and proposed expansions.

Please contact me if you need additional information.

The Information Center is under contract to the State Office of Historic Preservation and is responsible for the local management of the California Historical Resources Inventories. The Center is funded by research fees and a grant from the State Office of Historic Preservation. The Information Center does not conduct fieldwork and is not affiliated with any archaeological consultants who conduct fieldwork. A referral list of individuals who meet the Secretary of the Interior's standards for their profession is available at www.chrisinfo.org.

CULTURAL RESOURCES RECORDS SEARCH

The following are the results of a search of the cultural resources files at the Southern San Joaquin Valley Information Center. These files include known and recorded archaeological and historic sites, inventory and excavation reports filed with this office, and properties listed on the National Register of Historic Places, the California Register, the Historic Property Data File (10/23/09), the California Historical Landmarks, the California Inventory of Historic Resources, and the California Points of Historical Interest.

PRIOR CULTURAL RESOURCE INVENTORIES CONDUCTED WITHIN THE PROJECT AREA AND A ONE-HALF MILE RADIUS

There have been no previous cultural resource studies conducted within the project area. There has been one (1) cultural resource studies conducted within a one-half mile radius, KI-5.

(RS # 09-419)

KNOWN AND/OR RECORDED CULTURAL RESOURCES WITHIN THE PROJECT AREA AND A ONE-HALF MILE RADIUS

There are no recorded cultural resources within the project area and it is not known if resources exist there. There are no recorded cultural resources within a one-half mile radius of the project area. Please note that a lack of data does not indicate negative data.

There are no known cultural resources within the project area or the immediate vicinity that are listed in the National Register of Historic Places, the California Register, California Inventory of Historic Resources, the California Points of Historical Interest, or the California State Historic Landmarks.

RECOMMENDATIONS

We understand that unpermitted construction has already occurred. In these areas, no further archaeological investigation is needed. The current condition of the lands where new construction is proposed was not specified. If these lands are vacant and have never been developed, including placement of underground utilities, we recommend a professional archaeologist conduct a field survey of the areas prior to ground disturbance activities. Please note that agriculture does not constitute development. A referral list is available at www.chrisinfo.org. If you have any questions, comments, or need any additional information, please don't hesitate to contact our office at (661) 654-2289.

Re: Request for a Sacred Lands File Search and Native American Contacts List for a Proposed Sozinho Dairy Expansoin Project; located in the Hanford Area; Kings County, California

Dear Mr. Fleming:

The Native American Heritage Commission (NAHC), the State of California 'Trustee Agency' for the protection and preservation of Native American cultural resources (c.f. CA Public Resources Code §21070), was able to perform a record search of its Sacred Lands File (SLF) for the affected project area (APE) requested. The California Environmental Quality Act (CEQA; CA Public Resources Code Section 21000 – 21177) requires that any project that causes a substantial adverse change in the significance of an historical resource, that includes archaeological resources, is a 'significant effect' requiring the preparation of an Environmental Impact Report (EIR) per the California Code of Regulations §15064.5(b)(c)(f) CEQA guidelines). Section 15382 of the 2007 CEQA Guidelines defines a significant impact on the environment as "a substantial, or potentially substantial, adverse change in any of physical conditions within an area affected by the proposed project, including ...objects of historic or aesthetic significance." The NAHC SLF search **did not indicate** the presence of several Native American cultural resources within one-half - mile radius of the proposed projects (APE) planting sites.

This letter includes state and federal statutes relating to Native American historic properties of religious and cultural significance to American Indian tribes and individuals as 'consulting parties' under both state and federal law.

Early consultation with Native American tribes in your area is the best way to avoid unanticipated discoveries once a project is underway. Enclosed are the names of the nearest tribes and interested Native American individuals that the NAHC recommends as 'consulting parties,' for this purpose, that may have knowledge of the religious and cultural significance of the historic properties in the project area (e.g. APE). We recommend that you contact persons on the attached list of Native American contacts. In particular, we urge consultation with Keith Turner, Jim Redmoon and Bob Pennell. A Native American Tribe or Tribal Elder may be the only source of information about a cultural resource.. Furthermore we suggest that you contact the California Historic Resources Information System (CHRIS) at the Office of Historic Preservation Coordinator's office (at (916) 653-7278, for referral to the nearest Information Center of which there are 11..

Consultation with tribes and interested Native American consulting parties, on the NAHC list ,should be conducted in compliance with the requirements of federal NEPA (42 U.S.C. 4321-43351) and Section 106 and 4(f) of federal NHPA (16 U.S.C. 470 [f]et seq), and NAGPRA (25 U.S.C. 3001-3013), as appropriate. .

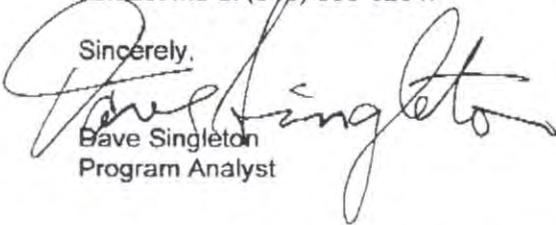

Lead agencies should consider avoidance, as defined in Section 15370 of the California Environmental Quality Act (CEQA) when significant cultural resources could be affected by a

project. Also, Public Resources Code Section 5097.98 and Health & Safety Code Section 7050.5 provide for provisions for accidentally discovered archeological resources during construction and mandate the processes to be followed in the event of an accidental discovery of any human remains in a project location other than a 'dedicated cemetery. Discussion of these should be included in your environmental documents, as appropriate.

The response to this search for Native American cultural resources is conducted in the NAHC Sacred Lands Inventory, established by the California Legislature (CA Public Resources Code §5097.94(a) and is exempt from the CA Public Records Act (c.f. California Government Code §6254.10) although Native Americans on the attached contact list may wish to reveal the nature of identified cultural resources/historic properties. Confidentiality of 'historic properties of religious and cultural significance' may also be protected the under Section 304 of the NHPA or at the Secretary of the Interior' discretion if not eligible for listing on the National Register of Historic Places. The Secretary may also be advised by the federal Indian Religious Freedom Act (cf. 42 U.S.C, 1996) in issuing a decision on whether or not to disclose items of religious and/or cultural significance identified in or near the APE and possibly threatened by proposed project activity.

If you have any questions about this response to your request, please do not hesitate to contact me at (916) 653-6251.

Sincerely,

Dave Singleton
Program Analyst

August 11, 2008

Jeff Fleming
Western Dairy Design Associates, Inc.
316 W. F Street, suite 100
Oakdale, CA 95361

Dear Mr. Fleming:

This memo is in regards to your request for a Traffic Analysis for the Sozinho Dairy #1 and #3 expansion projects. Based on the information below, these projects are not expected to degrade the present Level of Service (LOS) on the nearby County roads of regional significance below acceptable levels.

Sozinho Dairy #1 Project Traffic Analysis

This project was estimated to produce approximately 170 trips per day. Based on the following Average Daily Travel (ADT) figures for Houston Ave. and Hanford Armona Rd. between SR 43 and 10th Ave., and the peak hour capacity, it appears that the additional trips produced by this project would not impact the operational capacity of these roads.

Sozinho Dairy #3 Project Traffic Analysis

This project was estimated to produce approximately 69 trips per day. Based on the following Average Daily Travel (ADT) figures for Houston Ave. and Hanford Armona Rd. between SR 43 and 10th Ave., and the peak hour capacity, it appears that the additional trips produced by this project would not impact the operational capacity of these roads.

	<u>ADT</u>	<u>Peak Hour</u>	<u>ADT % Trucks</u>	<u>LOS</u>
<u>Houston Ave.</u>		1,767 - 1,833 cap.		A
West of SR 43:	2,963			
East Bound	1,429	111	7.3%	
West Bound	1,534	132	46.7%	
<u>Hanford Armona Rd.</u>		1,470 cap.		A
West of SR 43:	2,542	255	N/A	

If you have any questions regarding this matter, please call me at (559) 582-3211, ext. 2678, or email at Terri.King@co.kings.ca.us.

Sincerely,

KINGS COUNTY ASSOCIATION OF GOVERNMENTS

Terri King, Executive Director

FPMP Site Plans

SJVAPCD Rule 4550 Conservation Management Practices Plan

Rule 4570 Mitigation Measures Plan

Cargill “Dust – Off” information

RULE 8081 AGRICULTURAL SOURCES (Adopted November 15, 2001; Amended September 16, 2004)

1.0 Purpose

The purpose of this rule is to limit fugitive dust emissions from agricultural sources.

2.0 Applicability

This rule applies to off-field agricultural sources. The provisions of this rule adopted on November 15, 2001 shall remain in effect until October 1, 2004 at which time the amendments adopted on August 19, 2004 shall take effect.

3.0 Definitions

The definitions of terms established in Rule 8011 (General Requirements) shall apply to this rule.

4.0 Exemptions

In addition to the exemptions established in Rule 8011, the following exemptions are established for this rule:

4.1 On-field agricultural sources.

4.2 Off-field agricultural sources necessary to minimize or respond to adverse effects on agricultural crops caused during freezing temperatures as declared by the National Weather Service.

4.3 Any outdoor storage, handling, or transport of bulk materials which would be damaged by wetting with water or by the application of chemical/organic dust suppressants, provided owners/operators demonstrates to the satisfaction of the APCO and USEPA, that none of the control measures specified in Table 8081-1 of this rule can be implemented to limit visible dust emissions (VDE) to 20% opacity or provide a stabilized surface as defined in Rule 8011.

4.4 Any unpaved road segment with less than 75 vehicle trips for that day. If 75 vehicle trips for that day will be exceeded, an owner/operator shall comply with the requirements of this Rule. This threshold does not apply to unpaved road segments subject to the requirements of Rule 4550 (Conservation Management Practices). Equipment with loading forks employed in the act of loading or unloading harvested commodities in the harvest location and traveling at 3 miles per hour or less are not included in the trip counts.

- 4.5 The felling and removal of trees from forest stands. However, the rules of Regulation VIII will apply to other timber harvest activities such as site preparation of log storage and staging areas.
- 4.6 Outdoor storage of any bulk material at a single site where no material is actively being added or removed and where the total material stored is less than 100 cubic yards.
- 4.7 Any unpaved vehicle and equipment parking and traffic area less than 1.0 acre and more than one mile from an urban area, or with less than 50 Average Annual Daily Trips (AADT) or less than 150 VDT that are utilized intermittently for a period of 30 days or less during the calendar year.
- 4.8 Transport of a bulk material in an outdoor area for a distance of twelve feet or less with the use of a chute or conveyor device.

5.0 Requirements

An owner/operator shall comply with Sections 5.1 through 5.3 and sufficiently implement at least one of the control measures indicated in each section of Table 8081-1 to limit VDE to 20% opacity or to comply with the conditions for a stabilized surface as defined in Rule 8011. In addition to the requirements of this rule, a person shall comply with all other applicable requirements of Regulation VIII.

5.1 Requirements for Bulk Materials

No person shall undertake any outdoor handling, storage, and transport of bulk materials unless the appropriate requirements in Table 8081-1 of this rule are sufficiently implemented to limit VDE to 20% opacity or to comply with the conditions for a stabilized surface as defined in Rule 8011.

5.2 Requirements for Paved Roads and Unpaved Road Segments

5.2.1 Paved Road Segment

An owner/operator shall comply with the requirements of Rule 8061 (Paved and Unpaved Roads) regarding the construction standards for shoulder width and medians when constructing new paved roads or modifying existing paved roads.

**TABLE 8081-1
CONTROL MEASURES FOR BULK MATERIALS**

<p>A. HANDLING OF BULK MATERIALS:</p> <p>A1 When handling bulk materials, apply water or suitable chemical/organic stabilizers/suppressants sufficient to limit VDE to 20% opacity or;</p> <p>A2 Construct and maintain wind barriers sufficient to limit VDE to 20% opacity and with less than 50% porosity. If utilizing fences or wind barriers, control measure A1 shall also be implemented.</p>
<p>B. STORAGE OF BULK MATERIALS:</p> <p>B1 When storing bulk materials, comply with the conditions for a stabilized surface as defined in Rule 8011; or</p> <p>B2 Cover bulk materials stored outdoors with tarps, plastic, or other suitable material and anchor in such a manner that prevents the cover from being removed by wind action; or</p> <p>B3 Construct and maintain fences or wind barriers sufficient to limit VDE to 20% opacity and with less than 50% porosity. If utilizing fences or wind barriers, apply water or suitable chemical/organic stabilizers/suppressants sufficient to limit VDE to 20% opacity or;</p> <p>B4 Utilize a 3-sided structure with a height at least equal to the height of the storage pile and with less than 50% porosity.</p>
<p>C. ON-SITE TRANSPORTING OF BULK MATERIALS:</p> <p>C1 Limit vehicular speed while traveling on the work site sufficient to limit VDE to 20% opacity; or</p> <p>C2 Load all haul trucks such that the freeboard is not less than six (6) inches when material is transported across any paved public access road; or</p> <p>C3 Apply water to the top of the load sufficient to limit VDE to 20% opacity; or</p> <p>C4 Cover haul trucks with a tarp or other suitable cover.</p>
<p>D. OFF-SITE TRANSPORTING OF BULK MATERIALS:</p> <p>D1 Clean the interior of the cargo compartment or cover the cargo compartment before the empty truck leaves the site; and</p> <p>D2 Prevent spillage or loss of bulk material from holes or other openings in the cargo compartment's floor, sides, and/or tailgate; and</p> <p>D3 Load all haul trucks such that the freeboard is not less than six (6) inches when material is transported on any paved public access road and apply water to the top of the load sufficient to limit VDE to 20% opacity; or cover haul trucks with a tarp or other suitable closure.</p>
<p>E. OUTDOOR TRANSPORT OF BULK MATERIALS WITH A CHUTE OR CONVEYOR:</p> <p>E1 Fully enclose the chute or conveyor; or</p> <p>E2 Operate water spray equipment that sufficiently wets materials to limit VDE to 20% opacity; or</p> <p>E3 Wash separated or screened materials to remove conveyed materials having an aerodynamic diameter of 10 microns or less sufficient to limit VDE to 20% opacity.</p>

5.2.2 Unpaved Road Segments

5.2.2.1 On each day that 75 or more vehicle daily trips (VDT), or 25 or more VDT with 3 or more axles, will occur on an unpaved road segment, the owner/operator shall limit VDE to 20% opacity and comply with the requirements of a stabilized unpaved road by application and/or re-application/maintenance of at least one of the following control measures, or shall implement an approved Fugitive PM10 Management Plan as specified in section 7.0.

- 5.2.2.1.1 Watering;
- 5.2.2.1.2 Uniform layer of washed gravel;
- 5.2.2.1.3 Chemical/organic dust suppressants;
- 5.2.2.1.4 Vegetative materials;
- 5.2.2.1.5 Paving;
- 5.2.2.1.6 Roadmix;
- 5.2.2.1.7 Any other method(s) that can be demonstrated to the satisfaction of the APCO that effectively limits VDE to 20% opacity and meets the conditions of a stabilized unpaved road.

5.3 Requirements for Unpaved Vehicle/Equipment Parking and Traffic Areas

The control measures specified in Sections 5.3.1 through 5.3.5 shall be implemented on unpaved surface areas dedicated to any vehicle and equipment parking and traffic activity in order to limit VDE to 20% opacity and comply with the requirements of a stabilized unpaved road as specified in Rule 8011. If vehicle activity remains exclusively within an unpaved vehicle/equipment traffic area, section 5.3 may be implemented to limit VDE to 20% opacity.

5.3.1 Where 50 or more AADT will occur on an unpaved vehicle/equipment traffic area, the owner/operator shall limit VDE to 20% opacity and comply with the requirements of a stabilized unpaved road by the application and/or reapplication/maintenance of at least one of the following control measures, or shall implement an approved Fugitive PM10 Management Plan as specified in section 7.0:

- 5.3.1.1 Watering
- 5.3.1.2 Uniform layer of washed gravel;
- 5.3.1.3 Chemical/organic dust stabilizers/suppressants in accordance with the manufacturer's specifications;
- 5.3.1.4 Roadmix;

- 5.3.1.5 Paving;
- 5.3.1.6 Any other method(s) that can be demonstrated to the satisfaction of the APCO that effectively limits VDE to 20% opacity and meets the conditions of a stabilized unpaved road.

5.3.2 For unpaved vehicle/equipment traffic areas with 150 or more VDT, or 150 or more VDT that are utilized intermittently for a period of 30 days or less during the calendar year, the owner/operator shall implement the control options specified in 5.3.1.1 through 5.3.1.6.

5.3.3 On each day that 25 or more VDT with 3 or more axles will occur on an unpaved vehicle/equipment traffic area, the owner/operator shall limit VDE to 20% opacity and comply with the requirements of a stabilized unpaved road by the application and/or re-application/maintenance of at least one of the control measures specified section 5.3.1.1 through 5.3.1.6.

5.3.4 On each day that 75 or more VDT, or 26 or more VDT with 3 or more axles originates from within and remains exclusively within an unpaved vehicle/equipment traffic area, the owner/operator may apply/re-apply water to limit VDE to 20% opacity.

5.3.5 An owner/operator shall restrict access and periodically stabilize a disturbed surface area whenever a site becomes inactive at the end of the workday to comply with the conditions for a stabilized unpaved road as defined in Rule 8011.

5.4 Requirements for Carryout/Trackout

The District hereby incorporates by reference California Vehicle Code section 23112-23113. This section requires material, including dirt deposited on any public highway or street to be cleaned up as specified in California Vehicle Code 23112-23113.

6.0 Administrative Requirements

6.1 Test Methods

The applicable test methods specified in Rule 8011 shall be used to determine compliance with this rule.

6.2 Recordkeeping

An owner/operator shall comply with the recordkeeping requirements specified in Rule 8011.

7.0 Fugitive PM10 Management Plan for Unpaved Roads and Unpaved Vehicle/Equipment Traffic Areas

As a compliance alternative for sections 5.2.2, 5.3.1, and 5.3.2 of this rule, an operator may implement a Fugitive PM10 Management Plan (FPMP) that is designed to achieve 50% control efficiency and has been approved by the Fresno Regional office of the United States Department of Agriculture Natural Resource Conservation Service based on guidance and criteria established by the APCO. The FPMP shall be implemented on all days that traffic exceeds, or is expected to exceed, the number of annual average daily vehicle trips or vehicle trips per day as specified in sections 5.2.2, 5.3.1, and 5.3.2 of this rule. The owner/operator remains subject to all requirements of the applicable rules of Regulation VIII that are not addressed by the FPMP. It should be noted that the FPMP is not a compliance option for any requirement for a stabilized surface as defined in Rule 8011.

7.1 An owner/operator shall provide the proposed FPMP to the local office of the USDA Resource Conservation District (RCD) via fax, mail, or in person. The RCD shall submit the proposed FPMP to the Fresno Regional Office of the NRCS, who in turn shall evaluate and approve, disapprove, or conditionally approve each proposed FPMP based on guidance and criteria established by the APCO. An FPMP shall not be considered approved until the operator has received written approval from the NRCS. The NRCS and local RCDs shall make all approved FPMPs available to the APCO and the public.

7.2 An owner/operator may submit one FPMP covering multiple unpaved roads and unpaved vehicle/equipment traffic areas.

7.3 An owner/operator shall retain a copy of an approved FPMP at the operators place of business and make it available for inspection by the APCO or his designee during normal business hours. The approved FPMP shall remain valid until the APCO notifies the owner/operator or the NRCS that it needs to be revised, or until the owner/operator notifies the NRCS that the owner/operator has permanently discontinued implementing the FPMP. The NRCS shall notify the APCO as soon as possible in the event an operator notifies the NRCS the owner/operator has permanently discontinued implementing the FPMP.

7.4 Failure to comply with the provisions of an approved FPMP is deemed to be a violation of this rule.

7.5 A FPMP shall contain all of the following information:

- 7.5.1 Name(s), address(es), and phone number(s) of person(s) responsible for the preparation, submittal, and implementation of the FPMP, and of person(s) responsible for the unpaved road or traffic area.
- 7.5.2 A plot plan or map which shows the location of each unpaved road or traffic area to be covered by the FPMP, and the total length (miles) of unpaved roads, and the total area (acres) of the unpaved traffic areas.
- 7.5.3 The months (and weeks, if known) of the year that vehicle traffic is expected to exceed 75 vehicle trips per day, and the types of vehicles (e.g., passenger vehicles, trucks, mobile equipment) expected on each road or traffic area. As stated above, the FPMP shall be implemented on all days that traffic exceeds, or is expected to exceed, the number of annual average daily vehicle trips or vehicle trips per day as specified in sections 5.2.2, 5.3.1, and 5.3.2 of this rule.
- 7.5.4 Dust suppressants, gravel, and/or vegetative materials to be applied, including: product specifications; manufacturer's usage instructions (method, frequency, and intensity of application); type, number, and capacity of application equipment; and information on environmental impacts and approvals or certifications related to appropriate and safe use for ground application.
- 7.5.5 A description of the condition of the treated surfaces to be achieved as a result of the use of the suppressant or other dust control material.

This page intentionally blank.

**San Joaquin Valley Unified Air Pollution Control District
Fugitive PM10 Management Plan
General Information**

A Fugitive PM10 Management Plan (plan) is a compliance alternative to the 20% visible dust emission (VDE) limitation for unpaved roads and unpaved traffic areas. A plan does not apply to paved roads or paved traffic areas. Implementing either the VDE standard or a plan is necessary only on those days when traffic exceeds or is expected to exceed 75 vehicle trips. A plan may cover multiple unpaved roads and traffic areas within a facility.

Name of Facility: Sozinho Dairy

General Information – Page 2

Maps or Plot Plans

It is necessary to attach a map or plot plan. The locations of each unpaved road or traffic area covered by this plan shall be clearly identified and each location must be designated numerically or by name for referencing purposes.

For Unpaved Roads:

Total Number of Treated Road Segments: 3 Total Treated Road Length: 1.3 miles

For Unpaved Traffic Areas:

Total Number of Treated Traffic Areas: 4 Total Treated Traffic Area: 2.0 acres

Number of Locations

Separate "Treatment Options Forms" used for describing the treatment options shall be attached for each location that may have unique traffic patterns or different PM10 control methods. Unique traffic patterns may include the numbers and types of vehicles traveling on the treated unpaved surface, or different seasons or times of the year. If all locations are treated the same, submit only one form. If you desire detailed information, a District document titled "Criteria for Developing and Evaluating Fugitive PM10 Management Plans" is available from the District.

Number of "Treatment Options Forms" attached: 1

Conditions:

1. The owner or operator shall retain a copy of a District-approved plan (or a RCD-verified plan for agricultural sources) at the operator's place of business and make it available for inspection upon request.
2. The plan shall remain valid until the District notifies the owner or operator (or the RCD for agricultural sources) that the plan needs to be revised, or until the owner or operator has notified the District (or the RCD for agricultural sources) that the plan is no longer being implemented.
3. Failure to comply with the provisions of a plan is deemed to be a violation of Rule 8011 (Rule 8081 for agricultural sources).

Fugitive PM10 Management Plan Treatment Options Form

Facility Name (as described on the "General Information Form"):

Sozinho Dairy

1. Specific Locations

List the locations with similar traffic patterns where similar PM10 control treatments will be maintained. Please identify the unpaved roads or unpaved traffic areas by providing a reference number from a map or plot plan, or by indicating the names of the subject roads or traffic areas. Separate forms should be used if PM10 control treatments differ or if traffic occurs at different times of the year.

Road Names or Reference Numbers: Road 1, Road 2, Road 3, Road 4, Road 5

Total Miles: 1.3

Traffic Area Names or Reference Numbers: Commodity Area, 1.22 acre, Milk Barn / Parking, 1.28 acre

Total Acres: 2.5

2. Vehicle Activity

Check the months of the year when vehicle traffic is expected to exceed 75 vehicle trips per day, and vehicle types (passenger cars, trucks, etc.) Implements of husbandry are exempt for agricultural sources. If known, identify the weeks by reporting the beginning and ending dates.

Month	Dates	Month	Dates	Month	Dates
<input type="checkbox"/> January		<input type="checkbox"/> May		<input checked="" type="checkbox"/> September	
<input type="checkbox"/> February		<input type="checkbox"/> June		<input type="checkbox"/> October	
<input type="checkbox"/> March		<input checked="" type="checkbox"/> July		<input type="checkbox"/> November	
<input type="checkbox"/> April		<input checked="" type="checkbox"/> August		<input type="checkbox"/> December	

Vehicle Types: Tractor, Pickup Trucks, Commodity Trucks, Milk Tankers

3. District-accepted PM10 Control Methods

Please indicate the PM10 control method that will be employed by placing a check next to the control options listed below. It may be necessary to attach product specifications, manufacturer's usage instructions, and environmental impacts and approval certifications related to the safe use for ground applications. The following treatments have been demonstrated to achieve 50% PM10 control.

- | | |
|--|--|
| <input checked="" type="checkbox"/> Water Application | <input type="checkbox"/> Petroleum Emulsions |
| <input type="checkbox"/> Hygroscopic Suppressants (Road Salts) | <input type="checkbox"/> Polymer Emulsions |
| <input type="checkbox"/> Adhesives | <input type="checkbox"/> Bituminous Materials (Road Oil) |

Secondary PM10 Control Methods: The effectiveness of a control method can be enhanced by limiting vehicle speed to 15 miles per hour or less and/or applying gravel or recycled aggregate material to the unpaved surface area. Though implementing a secondary control method by itself is not approved, the District encourages its use in addition to the accepted PM10 control methods listed above. Please describe the secondary method that will be used, if one is proposed:

15 MPH speed limit

On the following page (Treatment Options Form - Page 2) please complete Section I if water application is selected. For all other applications, please complete Section II.

Treatment Options Form - Page 2

Facility Name (from previous page): Sozinho Dairy
 Specific Locations (from the previous page): Roads 1-5, Commodity Area, Milk Barn / Parking, Construction Area

Section I - Water Application: Please complete if water application was chosen.

1. **Application Frequency:** The minimum number of water applications per day is based on traffic volume. Please check the appropriate box or indicate the number of vehicle trips and water applications per day if different.

Number of applications per day	<input checked="" type="checkbox"/>	150 vehicle trips per day or less, one application per day.
	<input type="checkbox"/>	151 to 225 vehicle trips per day, two applications per day
	<input type="checkbox"/>	226 to 300 vehicle trips per day, three applications per day
	<input type="checkbox"/>	_____ vehicle trips per day, _____ applications per day.

2. **Approximate time of each application:** before known traffic events, wind forecasts
 Note: It is recommended that applications take place for maximum benefit, shortly before heavy traffic volumes, but at such times and manner to allow for water to soak in and not result in trackout of mud onto paved roads.

3. **Application Rate.** Please specify the application rate that will be used for PM10 control:

<input checked="" type="checkbox"/> _____ Gallons per Acre of area	Minimum Water Application Rates 650 gallons/acre 600 gallons/mile for an 8 foot wide road 750 gallons/mile for a 10 foot wide road 900 gallons/mile for a 12 foot wide road
<input checked="" type="checkbox"/> _____ Gallons per Mile of unpaved road	

4. **Equipment:** Please list the number and type of equipment (water truck, water wagon, trailer, etc.) that will be used for applying water, and the capacity of each in gallons:
One water truck, 3,600 gallon capacity

5. **Condition of Surface after Treatment:** Please describe the condition and observable changes to be achieved as a result of the water application and re-application. This may include expected color change, visual examination of surface crusting or compaction, or other methods.
Color change, compaction, surface crusting.

Section II – Hygroscopic/Chemical/Organic Materials: Please complete the following if the PM10 control methods chosen is not water application.

Product Name: _____
 Contractor's Name: _____ Phone Number: (____) _____
 Application Rate: _____ Gallons of *undiluted* material per mile or acre treated.
 Application Frequency: _____ Applications per year.

Minimum Application Frequencies:

Hygroscopic Suppressants (Road Salts)	Seasonal Sources (operating four months per year or less): One application per year within 30 days of the start of the season.
Adhesives	All Other Sources: Two applications per year. One application in middle spring and the other in late summer, unless otherwise specified by the manufacturer.
Petroleum Emulsions	
Polymer Emulsions	One application per year, per manufacturer's specifications. For seasonal sources, apply within 30 days of the start of the season.
Bituminous Materials	One initial application. Reapplication within next two years.

Condition of Surface after Treatment: Please describe the condition and observable changes to be achieved as a result of the application and maintenance of the PM10 control measure taken. This may include expected color change; visual examination of oil coverage, surface crusting or compaction; or other methods.

Selma, CA 93662

Re: Revised Conservation Management Practice Plan (CMPP)
Project Number: C-1080170

Dear Mr. Sozinho:

Enclosed you will find the revised CMP Plan for your agricultural crop production located at 11447 8-1/2 Avenue and 11235 8-1/2 Avenue, Hanford. The revisions were made per the Conservation Management Practices Plan Modification application you submitted to the District on January 17, 2008.

If you have any questions, please contact Ms. Karen Hatfield at (559) 230-5896.

CONSERVATION MANAGEMENT PRACTICES PLAN

CMP PLAN ID: C-7333-CMPP-1
FARM NAME: SOZINHO DAIRY #1 & #3
MAILING ADDRESS: 11447 8-1/2 AVENUE
HANFORD, CA 93230
FARM LOCATION: 11447 8-1/2 AVENUE
HANFORD, CA 93230
DESCRIPTION: 421 Acres including Dairy; Unpaved Roads and Unpaved Vehicle/Equipment Areas for Animal Feeding Operations; Corn, Grain, and Silage; Dry Beans, Cereal Grains, Safflower, Wheat, and Barley; Nut Crops; Unpaved Roads and Unpaved Vehicle/Equipment Areas for Crops
ISSUE DATE: January 29, 2008

In order to limit fugitive dust emissions from agricultural operation sites and to comply with District Rule 4550, the attached conservation management practices shall be utilized.

This CMP Plan is valid only at the location specified above, subject to the payment of required fees, and becomes void upon any transfer of ownership.

An application must be submitted to the District within 60 days following any changes that require this Plan to be revised.

Seyed Sadredin
Executive Director / APCO

David Warner
Director of Permit Services

CONSERVATION MANAGEMENT PRACTICES for Dairy

Corral/Manure Handling

1. Freestall housing shall be used at this dairy operation, thereby reducing PM10 emissions.
2. Scraping/harrowing of manure in the morning hours shall be practiced at this dairy operation, thereby reducing PM10 emissions.

Recordkeeping

3. Owner/operator shall maintain a copy of each Conservation Management Practice (CMP) application and CMP plan with supporting information necessary to confirm the implementation of the CMPs. This supporting information shall include, but not limited to, a map showing the location of (1) the agricultural operation site, (2) each crop, (3) unpaved roads and unpaved equipment/traffic areas, and (4) where each CMP will be implemented. Such records shall be retained for a minimum period of five years and made available for District inspection upon request.

CONSERVATION MANAGEMENT PRACTICES

for

Unpaved Roads and Unpaved Vehicle/Equipment Areas for Animal Feeding Operations

Unpaved Roads

1. 0.3 miles of private roads within this farm shall have less than 10 vehicle trips per day, thereby reducing PM10 emissions from vehicle travel on private roads.
2. Sand shall be applied to 0.5 miles of private roads within this farm, thereby reducing PM10 emissions from vehicle travel on private roads.
3. Water shall be applied to 1.3 miles of private roads within this farm, thereby reducing PM10 emissions from vehicle travel on private roads.
4. Washed gravel shall be applied to 0.5 miles of private roads within this farm, thereby reducing PM10 emissions from vehicle travel on private roads.

Unpaved Vehicle/Equipment Areas

5. Sand shall be applied to 0.5 acres of private vehicle/equipment traffic areas within this farm, thereby reducing PM10 emissions from vehicle travel on private vehicle/equipment traffic areas.
6. Water shall be applied to 2 acres of private vehicle/equipment traffic areas within this farm, thereby reducing PM10 emissions from vehicle travel on private vehicle/equipment traffic areas.
7. Washed gravel shall be applied to 1 acres of private vehicle/equipment traffic areas within this farm, thereby reducing PM10 emissions from vehicle travel on private vehicle/equipment traffic areas.
8. 0.5 acres of private vehicle/equipment traffic areas within this farm shall have less than 10 vehicle trips/day, thereby reducing PM10 emissions from vehicle travel on private vehicle/equipment traffic areas.

Recordkeeping

9. Owner/operator shall maintain a copy of each Conservation Management Practice (CMP) application and CMP plan with supporting information necessary to confirm the implementation of the CMPs. This supporting information shall include, but not limited to, a map showing the location of (1) the agricultural operation site, (2) each crop, (3) unpaved roads and unpaved equipment/traffic areas, and (4) where each CMP will be implemented. Such records shall be retained for a minimum period of five years and made available for District inspection upon request.

CONSERVATION MANAGEMENT PRACTICES

for

Corn, Grain, and Silage

Land Preparation/Cultivation

1. Chemigation and/or fertigation shall be applied to 328 acres of this crop, thereby reducing the total number of passes/soil disturbances and PM10 emissions. Chemigation and/or fertigation is the application of chemicals through an irrigation system or by aerial application. The owner/operator shall apply chemicals through the irrigation system.
2. Combined operations shall be applied to 328 acres of this crop, thereby reducing the total number of passes/soil disturbances and PM10 emissions. Combined operations is to perform two or more operations during one pass over the field.

Harvest

3. 328 acres of this crop shall be harvested by using green chop, thereby reducing the total number of passes/soil disturbances and PM10 emissions. Green chop is the harvesting of a forage crop without allowing it to dry in the field.

Recordkeeping

4. Owner/operator shall maintain a copy of each Conservation Management Practice (CMP) application and CMP plan with supporting information necessary to confirm the implementation of the CMPs. This supporting information shall include, but not limited to, a map showing the location of (1) the agricultural operation site, (2) each crop, (3) unpaved roads and unpaved equipment/traffic areas, and (4) where each CMP will be implemented. Such records shall be retained for a minimum period of five years and made available for District inspection upon request.

NOTE

5. The acreage required in the conditions above assume the full 328 acres of the crop will be planted. If less than 328 acres are planted, the acreage requirement for each conservation management practice may be less. However, at least three of the conservation management practices listed in the categories above must be used for all areas planted in this crop.

CONSERVATION MANAGEMENT PRACTICES for Dry Beans, Cereal Grains, Safflower, Wheat, and Barley

Land Preparation/Cultivation

1. Combined operations shall be applied to 328 acres of this crop, thereby reducing the total number of passes/soil disturbances and PM10 emissions. Combined operations is to perform two or more operations during one pass over the field.

Harvest

2. Baling/large balers shall be used on 328 acres of this crop, thereby reducing the total number of passes/soil disturbances and PM10 emissions. Baling/large balers is the use of non-conventional balers to harvest a forage crop.

Other

3. 328 acres of this crop shall not be burned, thereby reducing PM10 emissions. No burning is the elimination of all burning of crop residue, prunings, and trees.

Recordkeeping

4. Owner/operator shall maintain a copy of each Conservation Management Practice (CMP) application and CMP plan with supporting information necessary to confirm the implementation of the CMPs. This supporting information shall include, but not limited to, a map showing the location of (1) the agricultural operation site, (2) each crop, (3) unpaved roads and unpaved equipment/traffic areas, and (4) where each CMP will be implemented. Such records shall be retained for a minimum period of five years and made available for District inspection upon request.

NOTE

5. The acreage required in the conditions above assume the full 328 acres of the crop will be planted. If less than 328 acres are planted, the acreage requirement for each conservation management practice may be less. However, at least three of the conservation management practices listed in the categories above must be used for all areas planted in this crop.

CONSERVATION MANAGEMENT PRACTICES for Nut Crops

Land Preparation/Cultivation

1. Combined operations shall be applied to 50 acres of this crop, thereby reducing the total number of passes/soil disturbances and PM10 emissions. Combined operations is to perform two or more operations during one pass over the field.
2. Night farming shall be performed on 50 acres of this crop, thereby reducing the total number of passes/soil disturbances and PM10 emissions. Night farming is to perform land preparation/cultivation passes at night when moisture levels are higher.

Other

3. Cover crops shall be grown between the rows on 50 acres of this crop, thereby reducing the total number of passes/soil disturbances and PM10 emissions. Cover crops are the use of seeding and/or allowing natural vegetation to cover the soil surface. The owner/operator shall plant seeds to grow a cover crop that covers 100 percent of this crop acreage.

Recordkeeping

4. Owner/operator shall maintain a copy of each Conservation Management Practice (CMP) application and CMP plan with supporting information necessary to confirm the implementation of the CMPs. This supporting information shall include, but not limited to, a map showing the location of (1) the agricultural operation site, (2) each crop, (3) unpaved roads and unpaved equipment/traffic areas, and (4) where each CMP will be implemented. Such records shall be retained for a minimum period of five years and made available for District inspection upon request.

CONSERVATION MANAGEMENT PRACTICES

for

Unpaved Roads and Unpaved Vehicle/Equipment Areas for Crops

Unpaved Roads

1. Sand shall be applied to 2 miles of private roads within this farm, thereby reducing PM10 emissions from vehicle travel on private roads.
2. Water shall be applied to 6.5 miles of private roads within this farm, thereby reducing PM10 emissions from vehicle travel on private roads.
3. 4.5 miles of private roads within this farm shall have less than 10 vehicle trips per day, thereby reducing PM10 emissions from vehicle travel on private roads.

Recordkeeping

4. Owner/operator shall maintain a copy of each Conservation Management Practice (CMP) application and CMP plan with supporting information necessary to confirm the implementation of the CMPs. This supporting information shall include, but not limited to, a map showing the location of (1) the agricultural operation site, (2) each crop, (3) unpaved roads and unpaved equipment/traffic areas, and (4) where each CMP will be implemented. Such records shall be retained for a minimum period of five years and made available for District inspection upon request.

Rule 4570 Permit Application Form Dairy Confined Animal Feeding (CAF) Mitigation Measures

Facility Name: Sozinho Dairy #1 & #3 (adjoining facilities)

Facility Location: #1: 11447 8 ½ Ave; #3: 11235 8 ½ Ave

Mailing Address: 8489 E. Elkhorn Ave, Selma, CA 93662

Phone No.: (559) 582 - 7553

Cell Phone No.: (559) 381 - 5485

Owner/Operator: Danny Sozinho

Title: Operator

Signature: _____

Date: _____

Instructions

1. Please completely fill out the tables included in the following pages of this form indicating the mitigation measures that you will be utilizing to comply with Rule 4570.
2. This application must be submitted with application filing fees totaling \$300 (\$60 per permit unit x 5 permit units). If submitting this form at a workshop, please do not submit the fees at the workshop. The District will send you an invoice at a later date.
3. Have you received a CMP Plan as required by District Rule 4550 or permit from the District for your existing dairy?
 - If yes, what is your facility number? _____
 - If you have not received a CMP Plan or permit from the District, you must fill out the following application forms and attach them to this form. The application forms may be found on the District's website at http://www.valleyair.org/General_Info/AGLoader.htm:
 - Initial Permit Application Form for Farms (Form "PA-0")
 - Dairy Farm Permit Application Form (Form "Dairy")
 - CMP Plan Application (Form "CMP 0")
 - CMP Dairy Supplemental Application (Form "CMP 13")
 - Other Applicable CMP Supplemental Application Forms

444

<p style="text-align: center;">Feed Mitigation Measures</p>	<p>Dairy owners/operators must select at least four of the following feed mitigation measures:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Feed according to National Research Council (NRC) guidelines. <input type="checkbox"/> Feed animals high moisture corn or steam-flaked corn and not feed animals dry rolled corn. <input checked="" type="checkbox"/> At least once every 14 days remove feed from the area where animals stand to eat feed. <input checked="" type="checkbox"/> At least once every 14 days remove spilled feed from the area where equipment travels to place feed in the feed bunk. <input checked="" type="checkbox"/> Remove uneaten wet feed from feed bunks within twenty-four hours of a rain event. <input type="checkbox"/> Feed or dispose of rations within 48 hours of grinding and mixing rations. <input type="checkbox"/> Store grain in a weatherproof storage structure from October through May. <input type="checkbox"/> Implement an alternative mitigation measure(s), not listed above. <i>Please provide details on an attached Alternate Mitigation Measures supplemental application form.</i>
<p style="text-align: center;">Feed Mitigation Measures</p>	<p>Dairy owners/operators must select at least one of the following feed mitigation measures:</p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> Cover the horizontal surface of silage piles, except for the area where feed is being removed from the pile. <input type="checkbox"/> Collect leachate from the silage piles and send it to a waste treatment system such as a lagoon at least once every 24 hours. <input type="checkbox"/> Enclose silage in a bag and vent to a VOC control device with a combined VOC capture and VOC control efficiency of at least 80%. (Please note: Source testing per Section 7.2 of Rule 4570 will be required.) <input type="checkbox"/> Enclose silage in a weatherproof structure and vent to a VOC control device with a combined VOC capture and VOC control efficiency of at least 80%. (Please note: Source testing per Section 7.2 of Rule 4570 will be required.) <input type="checkbox"/> Eliminate silage from animal diet. <input type="checkbox"/> Implement an alternative mitigation measure(s), not listed above. <i>Please provide details on an attached Alternate Mitigation Measures supplemental application form.</i>
<p style="text-align: center;">Milk Parlor Mitigation Measures</p>	<p>Dairy owners/operators must select at least one of the following milk parlor mitigation measures:</p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> Flush or hose milk parlor immediately prior to, immediately after, or during each milking. <input type="checkbox"/> Enclose and vent the milk parlor to a VOC control device with an overall VOC capture and VOC control efficiency of at least 80% when animals are in the parlor. <input type="checkbox"/> Implement an alternative mitigation measure(s), not listed above. <i>Please provide details on an attached Alternate Mitigation Measures form.</i>
<p style="text-align: center;">Freestall Barn Mitigation Measures</p>	<p>Dairy owners/operators with freestall barns must select at least two of the following freestall barn mitigation measures:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Vacuum or scrape freestall lanes immediately prior to, immediately after, or during each milking. <input checked="" type="checkbox"/> Inspect water pipes and troughs and repair leaks at least once every 14 days. <input type="checkbox"/> Use non-animal waste-based bedding and non-separated solids based bedding for at least 90% of the bedding material, by weight, for freestalls (e.g. rubber mats, almond shells, sand, or waterbeds). <input type="checkbox"/> Remove animal waste that is not dry from individual cow freestall beds at least once every 14 days. <input type="checkbox"/> Groom (rake, harrow, scrape, or grade) bedding in freestalls at least once every 14 days. <input type="checkbox"/> Use a dry animal waste handling system, such as scraping, instead of a liquid animal waste handling system, such as a flush system. <input type="checkbox"/> Have no animals in exercise pens, corrals, or drylots at any time. <input checked="" type="checkbox"/> Flush freestalls more frequently than the milking schedule. <input type="checkbox"/> Vacuum animal waste instead of flushing or scraping and apply animal waste directly to land either through injection or incorporation within 72 hours of removal from animal housing or vacuum truck. <input type="checkbox"/> Implement an alternative mitigation measure(s), not listed above. <i>Please provide details on an attached Alternate Mitigation Measures supplemental application form.</i> <input type="checkbox"/> Not Applicable – No freestall barns

**Corral
Mitigation
Measures**

Dairy owners/operators with corrals must select at least six of the following mitigation measures for each corral where animals have been housed in the last 30 days:

- Please note, only one of the following three measures will count towards the six required for this category.**
- Clean animal waste from corrals at least 4 times per year with at least 60 days between cleaning.
 - Clean corrals at least once between April and July and at least once between October and December.
 - Clean concreted areas such that the depth of animal waste does not exceed 12 inches at any point or time, except for in-corral mounding.

- Please note, only one of the following two measures will count towards the six required for this category.**
- Maintain corrals to ensure drainage and prevent water from standing more than 48 hours after a storm.
 - Maintain corrals and drylots so that there are not indentions in the surface where puddles may form and remain for more than 48 hours.

- Please note, only one of the following three measures will count towards the six required for this category.**
- Install no shade structures in the corrals.
 - Install shade structures such that they are constructed with a semi-permeable roofing material.
 - Install all shade structures uphill of any slope in the corral.

- Please note, only one of the following two measures will count towards the six required for this category.**
- Use lime or a similar absorbent material in the pens according to the manufacturer's recommendations to minimize moisture in the pens.
 - Apply thymol to corral soil in accordance with the manufacturer's recommendation.

- Please note, any of the following nine measures may be selected.**
- Manage corrals such that the animal waste depth in the corral does not exceed 12 inches at any time or point, except for in-corral mounding.
 - Knockdown fence line animal waste build-up prior to it exceeding a height of 12 inches at any time or point.
 - Scrape or flush feed aprons in corrals at least once every seven 7 days.
 - Slope the surface of the pens at least 3% where the available space for each animal is 400 square feet or less. Slope the surface of the pens at least 1.5% where the available space for each animal is more than 400 square feet per animal.
 - Install floats on the troughs or use another method approved by the APCO, ARB, and EPA to ensure that the water in the troughs does not intentionally or unintentionally overflow or spill onto an earthen ground.
 - Inspect water pipes and troughs and repair leaks at least once every 14 days.
 - Groom (harrow, rake, or scrape) pens sufficiently to maintain a dry surface.
 - House animals in an enclosure vented to a VOC control device with a combined VOC capture and VOC control efficiency of at least 80%.
 - Implement an alternative mitigation measure(s), not listed above. *Please provide details on an attached Alternate Mitigation Measures supplemental application form.*
 - Not Applicable – No open corrals**

**Solid Waste
Mitigation
Measures**

Dairy owners/operators which handle solid animal waste or separated solids animal waste stored outside the animal housing must select at least two of the following solid or separated solids animal waste mitigation measures:

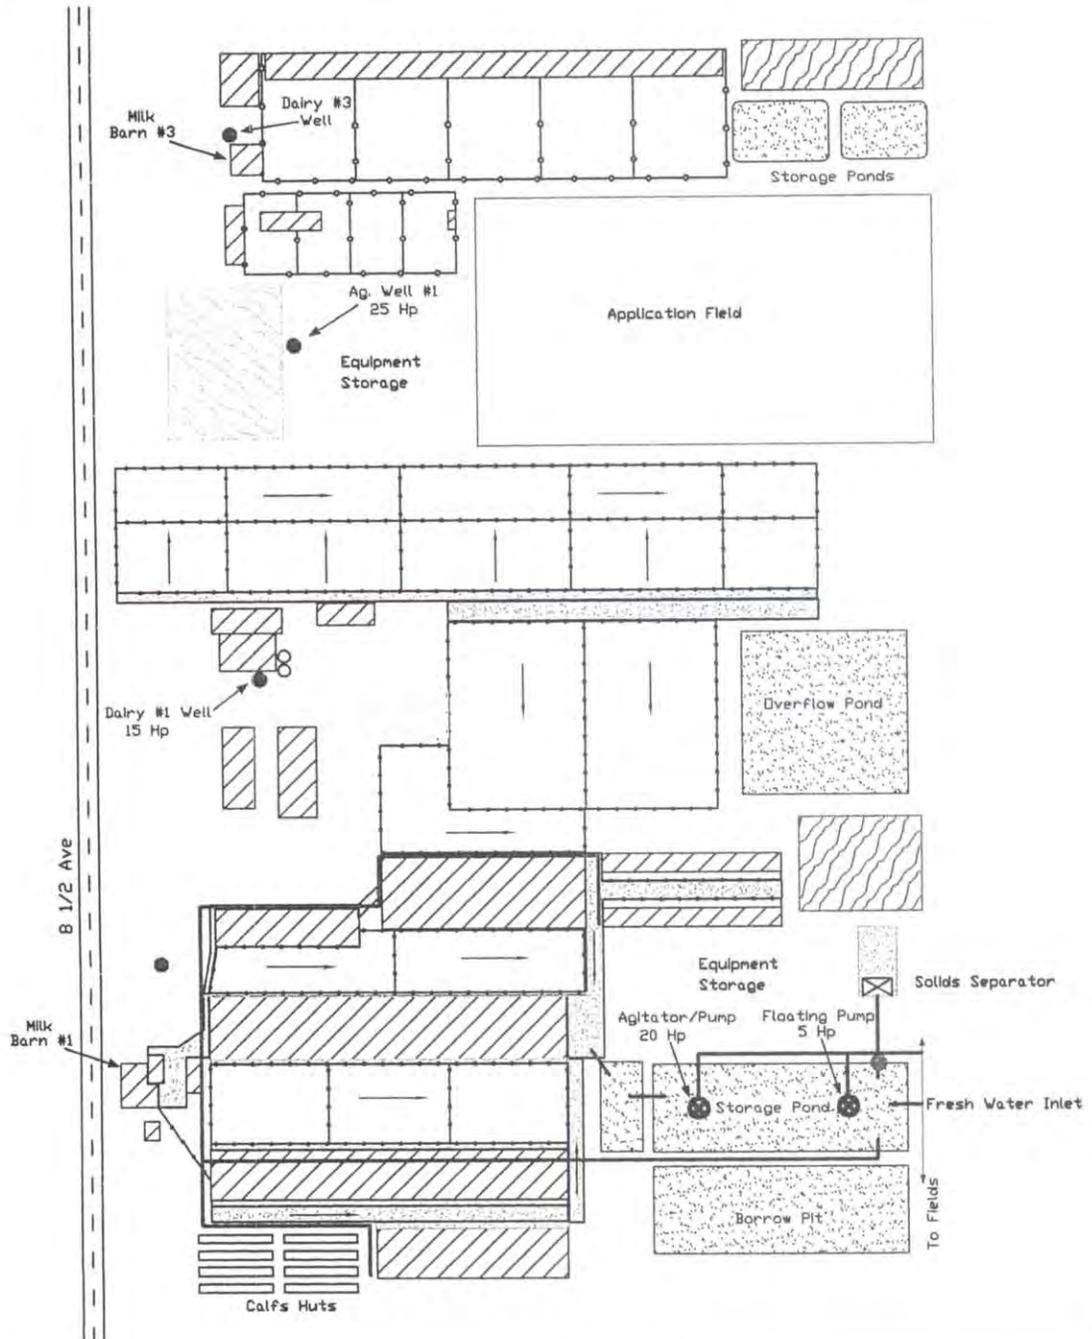

- Please note, only one of the following two measures will count towards the two required for this category.**
- Remove separated solids from the facility within 72 hours of separation.
 - Store no separated solids outside of anaerobic digesters or aerobic lagoons.

- Please note, any of the following seven measures may be selected.**
- Cover dry animal waste piles outside the pens with a weatherproof covering from October through May, except for times, not to exceed 24 hours per event, when wind events remove the covering.
 - Cover dry separated solids outside the pens with a weatherproof covering from October through May, except for times, not to exceed 24 hours per event, when wind events remove the covering.
 - Remove animal waste from the facility within 72 hours of removal from the pens or corrals.
 - Compost animal waste removed from pens with an aerated static pile vented to a VOC control device with an overall VOC capture and VOC control efficiency of at least 80%.
 - Store all removed animal waste in an enclosure vented to a VOC control device with an overall VOC capture and VOC control efficiency of at least 80%.
 - Send at least 51% of the animal waste removed from animal housing to a digester, with a VOC control device with an overall VOC capture and VOC control efficiency of at least 80%.
 - Implement an alternative mitigation measure(s), not listed above. *Please provide details on an attached Alternate Mitigation Measures supplemental application form.*
 - Not Applicable – No solid waste handled**

<p style="text-align: center;">Liquid Waste Mitigation Measures</p>	<p>Dairy owners/operators which handle liquid animal waste must select at least <u>one</u> of the following liquid animal waste mitigation measures:</p> <ul style="list-style-type: none"> <input type="checkbox"/> Use phototrophic lagoon. (Please note: Testing per Section 7.2 of Rule 4570 will be required.) <input type="checkbox"/> Use an anaerobic treatment lagoon designed according to NRCS Guideline No. 359. (Please note: Testing per Section 7.2 of Rule 4570 will be required.) <input type="checkbox"/> Use an aerobic lagoon. (Please note: Testing per Section 7.2 of Rule 4570 will be required.) <input type="checkbox"/> Use a mechanically aerated lagoon (aerators). (Please note: Testing per Section 7.2 of Rule 4570 will be required.) <input type="checkbox"/> Manage the facility such that there are no lagoons at the facility. (Lagoons are defined as a basin constructed, maintained, and operated to store and treat animal waste. This does not include basins primarily used to collect runoff and storm water.) <input checked="" type="checkbox"/> Remove solids from the waste system with a solid separator system, prior to the waste entering the lagoon. <input type="checkbox"/> Maintain lagoon pH between 6.5 and 7.5. <input type="checkbox"/> Maintain organic loading in the lagoon such that the total solids are less than 3.5 mg (dry weight)/mL, or total volatile solids are less than 3.5 mg/mL. <input type="checkbox"/> Use additional non-standard equipment or chemicals on the solid separator system, such as roller or screw presses or chemical coagulants and flocculants, that increase the percent of solid separation achieved by the separator and that is approved by the APCO, ARB, and EPA. <input type="checkbox"/> Cover the lagoon or storage pond and vent to a VOC control device with an overall VOC capture and VOC control efficiency of at least 80%. <input type="checkbox"/> Implement an alternative mitigation measure(s), not listed above. <i>Please provide details on an attached Alternate Mitigation Measures supplemental application form.</i> <input type="checkbox"/> Not Applicable – No liquid waste handled
<p style="text-align: center;">Land Application Mitigation Measures</p>	<p>Dairy owners/operators which land apply dry or liquid animal waste must select at least <u>two</u> of the following land applied dry or liquid animal waste mitigation measures:</p> <p>Please note, only one of the following two measures will count towards the two required for this category.</p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> Allow liquid animal waste to stand in the fields no more than 24 hours after irrigation. <input type="checkbox"/> Apply no liquid animal waste. <p>Please note, only one of the following two measures will count towards the two required for this category.</p> <ul style="list-style-type: none"> <input type="checkbox"/> Apply no solid animal waste with a moisture content of more than 50%. <input type="checkbox"/> Apply no solid animal waste. <p>Please note, any of the following three measures may be selected.</p> <ul style="list-style-type: none"> <input checked="" type="checkbox"/> Land incorporate all solid animal waste within 72 hours of removal from animal housing. <input type="checkbox"/> Only apply solid or liquid animal waste that has been treated with an anaerobic or aerobic lagoon or digester system. <input type="checkbox"/> Implement an alternative mitigation measure(s), not listed above. <i>Please provide details on an attached Alternate Mitigation Measures supplemental application form.</i> <input type="checkbox"/> Not Applicable – Liquid or solid manure is not land applied

Dust-Off[®] Road Treatment

WHY DO YOU NEED DUST-OFF[®] ROAD TREATMENT?

Increased safety. Vehicles traveling on an untreated gravel or dirt road pose several safety problems. The dust they create limits visibility for vehicles behind, for road workers and others traveling nearby.

Reduced vehicle maintenance. Dust gets into filters, bearings and hundreds of other auto parts. Less dust means less dust-related maintenance.

Increased stabilization. Untreated road surfaces require more frequent repairs of potholes, washboard, rutting and other damage. Dust-Off[®] will lengthen the time between required maintenance!

Greater efficiency. Smooth, well compacted travel surfaces will allow for ease of travel on unimproved roads. Dust-free environments will permit activities to progress at optimum speed – safely. Maximum visibility on road or work areas will assure the operation continues at top efficiency, regardless of dry conditions.

Reduces crop damage. Dust that lands on nearby crops can injure, if not destroy. Dust is also a carrier of harmful mites and pests and can inhibit the activity of beneficial insects when introduced to crops. Access and perimeter roads that are treated with Dust-Off[®] help solve this problem.

Contact your local distributor or call Cargill at **1-888-385-SALT (7258)**

to learn more about how Dust-Off[®] road treatment can save you time, money and a lot more.

D
A
R
D**

ASAE is a professional and technical organization, of members worldwide, who are dedicated to advancement of engineering applicable to agricultural, food, and biological systems. ASAE Standards are consensus documents developed and adopted by the American Society of Agricultural Engineers to meet standardization needs within the scope of the Society; principally agricultural field equipment, farmstead equipment, structures, soil and water resource management, turf and landscape equipment, forest engineering, food and process engineering, electric power applications, plant and animal environment, and waste management.

NOTE: ASAE Standards, Engineering Practices, and Data are informational and advisory only. Their use by anyone engaged in industry or trade is entirely voluntary. The ASAE assumes no responsibility for results attributable to the application of these ASAE Standards, Engineering Practices, and Data. Conformity does not ensure compliance with applicable ordinances, laws and regulations. Prospective users are responsible for protecting themselves against liability for infringement of patents.

This standard may be designated ANSI/ASAE. If so, this standard is an American National Standard. Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution.

CAUTION NOTICE: In the case that this standard is an ANSI/ASAE standard, this American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Lighting for Dairy Farms and the Poultry Industry

This Engineering Practice combines and therefore supersedes ASAE R286, Lighting for Dairy Farms, and ASAE R332, Poultry Industry Lighting, developed by the joint Illuminating Engineering Society-ASAE Farm Lighting Committee, EPP-48. R286 was adopted by ASAE June 1965; R332 was adopted by ASAE December 1969. This document was approved by the ASAE Electric Power and Processing Division Standards Committee and adopted by ASAE as ASAE Recommendation R344 February 1971; revised editorially and reclassified as an Engineering Practice December 1975; reconfirmed December 1980; revised March 1982; reconfirmed July 1985, December 1987; revised July 1988, reaffirmed December 1993, December 1998; reaffirmed for five years December 1999; revised editorially March 2000.

1 Purpose and scope

1.1 This Engineering Practice is intended to guide those responsible for or concerned with, the design of lighting installations on dairy farms, on poultry farms, and within the poultry industry.

1.2 This Engineering Practice applies only to the safety and effective performance of workers as they accomplish specific tasks requiring various levels of illumination. It does not apply to lighting installations used for changing the physiological or biological properties of poultry or livestock to alter their production capabilities.

1.3 The lighting recommendations are based on information obtained from search of current literature, from people and organizations active in this field, and from field measurements of lighting requirements for difficult seeing tasks. The portable Visual Task Evaluator from the Illuminating Engineering Society (IES) headquarters was used to establish the lighting requirements for many of the visual tasks. This document is in accordance with the latest knowledge and practice of the lighting field, and conforms to all official IES reports. However, future progress in agriculture and lighting will undoubtedly make revisions desirable.

2 General recommendations

2.1 Quantity of illumination

2.1.1 Recommended illumination levels

2.1.1.1 Recommended illumination levels for the poultry industry are in Table 1. Recommended illumination levels for dairy farms are in Table 2. Recommended illumination levels for general areas associated with these facilities are in Table 3. These recommended levels are commensurate with the difficulty of the seeing tasks of each area and with the general cost of lighting.

2.1.1.2 The illumination values shown in Tables 1, 2, and 3 are intended to be minimum on the task regardless of the plane in which they are located. Supplemental luminaires may be used in combination with general lighting to achieve those illumination levels on the work plane.

2.1.1.3 Recommended illumination levels should be maintained at all times when luminaires are in use. Initial values must be greater by a percentage sufficient to compensate for the normal depreciation of illumination expected in luminaire service.

2.1.2 Daylighting

2.1.2.1 The source of illumination is not limited to electric lighting. Illumination from daylight should also be considered. Many farm buildings where seeing tasks are not difficult can be adequately illuminated during daytime by the judicious placement of windows. In areas where there are difficult seeing tasks, windows should be located so glare from the direct

Table 1 – Recommended illumination for poultry farm industry tasks

Areas and visual tasks	Minimum light on task at any time		Explanation
	lx	fc	
Brooding, production, and laying houses			
Feeding, inspection, and cleaning	200	20	Provided by a lighting circuit separate from the circuit used to stimulate production and growth.
Charts and records	500	50	Localized lighting is needed where charts and records are kept.
Thermometers, thermostats, and time clocks	500	50	Localized lighting is needed to accurately determine readings or setting.
Hatcheries			
General area and loading platform	200	20	Needed for operators to move about readily and safely. Needed for cleanliness of the general area.
Inside incubators	500	50	Portable or localized lighting is needed for inspection and cleaning inside incubators.
Dubbing station	2000	200	Needed to prevent excessive cuts and injury. Supplemental light in addition to general lighting should be used.
Sexing	10 000	1000	Needed for sex sorting of baby chicks. Supplemental light should be used in a closed area to prevent excessive brightness ratio between the task area and the immediate surrounding areas.
Egg handling, packing, and shipping			
General cleanliness	1000	100	General illumination is needed to keep area clean and to detect any unsanitary conditions.
Egg quality inspection	1000	100	Needed to examine and grade eggs. Candling and other special grading equipment are used as separate devices for examining and grading eggs.
Loading platform, egg storage area, etc.	200	20	Needed for operator to move about readily and safely, and for safe operation and mechanical and loading equipment.
Egg processing			
General lighting	1000	100	Must meet the requirements of cleanliness for food preparation area. Includes liquid processing, pasteurizing, and freezing of raw eggs.

Table 1 – Recommended illumination for poultry farm industry tasks (continued)

Areas and visual tasks	Minimum light on task at any time		Explanation
	lx	fc	
Fowl processing plant			
General (excluding killing and unloading area)	1000	100	General lighting for cleanliness, inspection, and sanitation. Must meet requirements of food preparation areas.
Government inspection station and grading stations	1000	100	Needed to detect diseases and blemishes. Vertical illumination is needed if birds are hanging.
Unloading and killing area	200	20	Needed to move about readily and safely.
Feed storage			
Grain, feed rations	200	20	Needed to read labels, scales and detect impurities and spoilage in feed.
Processing	200	20	Needed for operator to move about readily and safely, read labels, scales, and equipment dials. Supplemental light would be needed if machine repairs are necessary.
Charts and records	500	50	If detailed records or charts are kept in the feed room, localized lighting in this area would be needed.

Table 2 – Recommended illumination for dairy farms

Areas and visual tasks	Minimum light any time		Explanation
	lx	fc	
Milking operation area (milking parlor & stall barn)			
General	200	20	Required to determine cleanliness of cow, detect undesirable milk, handle milking equipment readily, and to detect dirt and foreign objects on the floor. Should be available at cow-edge of gutter, on floor.
Cow's udder	500	50	Supplemental, to determine cleanliness of udder, to clean udder, to examine udder. Required for operator to move about readily and safely, and to determine floor cleanliness.
Milk handling equipment and storage area (milk house or milk room)			
General	200	20	Required for operator to move about readily and safely, and to determine floor cleanliness.
Washing area	1000	100	Necessary to detect dirt and other impurities on the milk handling equipment. Supplementary, portable, ultra-violet fixture should be available in this area to aid in detecting milkstone on the equipment.

Table 2 – Recommended illumination for dairy farms (continued)

Areas and visual tasks	Minimum light any time		Explanation
	lx	fc	
Bulk tank interior	1000	100	Necessary to adequately inspect tank for cleanliness. Additional spots may be required to illuminate dip-stick or scales.
Loading platform	200	20	Required for operator to move about readily and safely.
Feeding area (stall barn feed alley, pens, and loose housing feed area)			
	200	20	Required for detecting foreign objects in grain, hay, or silage.
Feed storage area, forage			
Haymow	50	5	Required for safety of the operator in moving about.
Hay inspection area	200	20	Required for detecting foreign objects in grain, hay, or silage.
Ladders and stairs	200	20	
Silo	50	5	Luminaries should be mounted at the top of the silo, near the ladder chute, for ease in cleaning and lamp replacement.
Silo room	200	20	Required for detecting foreign objects in grain, hay, or silage.
Feed storage area, grain and concentrate			
Grain bin	50	5	Required to inspect amount and condition of grain. When grain is suspected of being moldy, containing foreign objects or otherwise contaminated, samples should be inspected under higher illumination levels.
Concentrate storage area	100	10	Required to read labels. Higher illumination levels are required for critical inspection for impurities and spoilage.
Feed processing area	100	10	Required for operator to move about readily and read labels, scales, and equipment dials. Additional light must be supplied by portable luminaries or daylighting if machine repairs are necessary.
Livestock housing area (community, maternity, individual calf pens, and loose-housing holding and resting areas)			
	100	10	Required to observe the condition of the animals and to detect hazards to the livestock and operator. Portable, supplementary lighting units can be used to examine or treat individual animals when required.

sunlight will not likely cause a problem. Many poultry buildings must eliminate all daylighting where photo period is controlled for stimulation of poultry.

Table 3 - Recommended illumination for general areas associated with dairy and poultry facilities

Areas and visual tasks	Minimum light on task at any time		Explanation
	lx	fc	
Machine storage			
Garage and machine shed	100	10	Needed to move machinery safely. Supplemental lighting is needed for minor equipment repair.
Farm shop			
Active storage area	100	10	Needed for operator to move about readily and safely.
General shop	500	50	Machinery repair, rough sawing.
Rough bench machine work	500	50	Painting, small parts, storage, ordinary sheet metal work, welding, medium bench work. May use localized lighting.
Miscellaneous			
Farm office	1000	100	
Restrooms	200	20	
Pumphouse	200	20	
Exterior			
General inactive areas	5	0.5	Recommended to discourage prowlers and predatory animals.
General active areas (paths, rough storage, barn lots)	50	5	Needed for operator to move about safely.
Service areas (fuel storage, shop, feed lots, building entrances)	30	3	Needed for servicing machinery.

2.1.2.2 Shielding should be provided on windows directly facing the sun and should be located in areas of difficult seeing tasks. Electric illumination is often preferred over daylight illumination in these areas because of difficulty in controlling daylight illumination and the variability of daylighting.

2.1.2.3 Efficient operations are often performed when only electric illumination is available. Therefore, these recommendations provide desirable amounts of electric illumination without dependence on daylight. For information on techniques for utilizing and controlling daylight, refer to IES Recommended Practice RP-5, Recommended Practice of Daylighting.

2.2 Quality of illumination. Specifying the quantity of light in no way establishes quality of a lighting installation. Important factors affecting lighting installation are uniformity, glare, color, and environment.

2.2.1 Uniformity

2.2.1.1 Uniformity of illumination is expressed as a ratio of a maximum lux (footcandle) value to the minimum lux (footcandle) value over an area. Satisfactory uniformity ratios vary from 1.5:1 for difficult seeing tasks to 5:1 for less difficult tasks. In general, better uniformity of illumination is achieved with greater mounting heights and closer spacing of luminaires.

2.2.1.2 Light sources should be located to minimize shadows cast on the work by workers and obstructions. Objects should receive illumination from more than one direction to minimize the density of shadows and to provide uniform illumination.

2.2.2 Glare. Glare is any brightness within the field of vision that causes

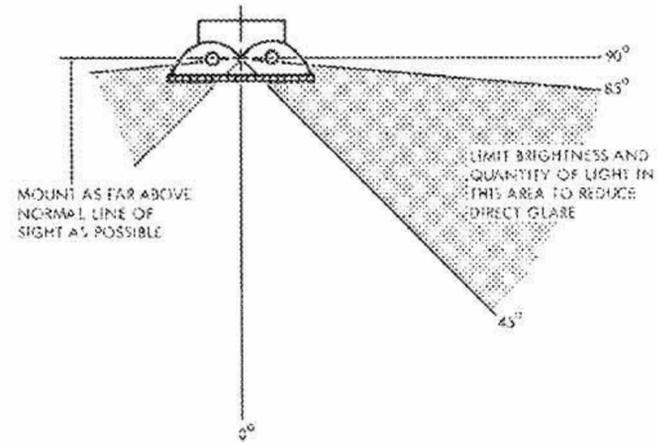

Figure 1 - Direct glare control for luminaires

discomfort, annoyance, interference with vision, or eye fatigue. It is usually caused by uncontrolled light which strikes the eyes directly from a luminaire, but it can also be caused by the reflection of bright light by glossy or mirror-like surfaces. Luminaires should be selected with sufficient shielding, as shown in Figure 1, and placed so glare can be held below an objectionable level. Luminaires should be mounted as far above the normal line of sight as possible and should be designed to limit both the brightness and the quantity of light emitted in the 45 to 85 deg zone since such light is likely to be well within the field of view and may interfere with vision. This precaution extends to the use of localized lighting equipment.

2.2.3 Color. For performing some specialized seeing tasks, notably color discrimination processes and certain inspection work, light-source color may be an important factor of illumination quality. Color is also known to have certain psychological effects upon people and their emotions. These factors should be considered when selecting light sources to obtain quality lighting. For example, when grading or sorting eggs, fluorescent lamps are more effective than incandescent.

2.2.4 Environment. Certain environmental factors can greatly influence the quality of a lighting installation. Room surfaces should have high reflectance, matte finishes to help prevent excessive brightness ratios. The ceilings, walls, and floors can increase the utilization of light within a room by acting as a secondary large-area light source. Luminaires which direct some light upward toward a ceiling having a relatively high reflectance will help create a comfortable visual environment. Recommended reflectance values are presented in Table 4.

2.3 Lighting equipment

2.3.1 Lamps

2.3.1.1 Light sources available for farm lighting applications are incandescent, fluorescent, and high-intensity discharge (HID) (mercury, metal halide, high-pressure sodium, low-pressure sodium). The latter four sources are more efficient and generate 2 to 5 times as much light as the incandescent filament for the same amount of electrical energy. They also have a longer life. However, they require auxiliary electrical

Table 4 - Recommended matte reflectance values for lighting farm buildings

Surface	Reflectance, percent
Ceilings	80 to 90
Walls	40 to 60
Desk and bench tops, machines & equipment	25 to 45
Floors	20 minimum

equipment, such as ballasts. Refer to Section 9—Industrial Lighting, in the 1981 Applications Volume of the IES Lighting Handbook.

2.3.1.2 HID lamps will normally be used outdoors, but are also suitable indoors where 4 m (13 ft) or more mounting height is available. HID sources require 3 to 7 min warm-up time and may not be suited to applications where they may be turned off and on in less than an hour or two. HID lamps differ in color rendering ability, in general being lower than fluorescent or incandescent.

2.3.1.3 Incandescent-filament lamps require no auxiliary electrical control equipment, and are available in many different types and sizes. They are a high brightness source and should be used in appropriate luminaires to minimize glare. Various types of reflectorized incandescent-filaments may be used to spotlight or floodlight specific areas.

2.3.1.4 Fluorescent lamps provide a large light source. Even though surface brightness of fluorescent lamps is relatively low, fluorescent lamps should always be used in a suitable luminaire that will minimize glare. Fluorescent lamps are available in different sizes, types, and colors, which can provide color rendering, cool or warm colors. But they are temperature sensitive, and light output drops when used in either very high or extremely low ambient temperatures. Fluorescent lamps used in cold areas require a special ballast designed for low temperature starting, and an enclosure to maintain lamp temperature. High humidity causes moisture condensation on lamps in open luminaires and may prohibit fluorescent lamps from starting. Refer to Section 8—Light Sources, in the 1984 Reference Volume of the IES Lighting Handbook.

2.3.2 Luminaires

2.3.2.1 The light from most lamps is emitted in many directions. The purpose of a luminaire is to control the direction at which light is emitted so glare will be reduced and light used more effectively on the objects to be seen. In outdoor applications, luminaires should direct light downward to minimize losses, but in indoor applications, it is desirable to have a portion of the light directed toward the ceiling. Some of the light striking a light-colored ceiling is reflected back to the seeing tasks and provides a well-balanced visual environment.

2.3.2.2 Luminaires control light by reflectors (porcelain, enamel, aluminum, glass, or plastic), refractors (glass or plastic prismatic lenses), or by diffusers (glass or plastic diffusing shields). Often one or more of these principles are used in the same luminaire. Reflectors and refractors are used to direct the light for more efficient utilization. Reflectors, refractors, and diffusing shields are used to prevent glare. Refer to Section 9 in the 1984 Reference Volume of the IES Lighting Handbook.

2.3.2.3 A luminaire prevents water from striking the hot lamps when they are used in damp or outdoor locations. There are some specifically constructed, reflectorized, incandescent filament lamps which can be exposed to the weather or water spray.

2.3.3 Codes

2.3.3.1 The use of lighting equipment is governed by many federal, state, and local codes. Some public health codes specify minimum illumination levels required in processing plants, egg handling areas, milking and milk handling areas to maintain health standards. Public health lighting requirements are normally below those shown in Tables 1 and 2 since they are concerned only with sanitation. The levels recommended were selected for efficient performance of visual tasks but with concern for proper sanitation.

2.3.3.2 The modern farm includes many types of occupancies which may be wet, damp, corrosive, dirty, surrounded by combustible materials, or saturated with gasoline fumes. Therefore, it is important to follow the National Fire Protection Association Standard No. 70, National Electrical Code, and any local regulation which may be in effect when installing the lighting equipment. Assistance may be obtained by contacting a local electric power supplier or by referring to the Agricultural Wiring Handbook published by the National Food and Energy Council.

2.3.4 Maintenance

2.3.4.1 Lighting systems should be inspected and serviced regularly to

maintain illumination levels for which they are designed. The elements of maintenance are light sources, luminaires, and room surfaces.

2.3.4.2 The lighting output of most lamps diminishes with use. In many cases, it is economical to replace lamps before they fail. Saving can sometimes be realized by replacing groups of lamps near the end of their useful life, rather than replacing individual lamps as they burn out.

2.3.4.3 The rate of depreciation of lamps and lighting equipment caused by dirt accumulation is dependent upon the atmospheric conditions and the type of lighting system employed. Losses up to 50% have resulted from poor maintenance.

2.3.4.4 Wall surfaces should be cleaned and painted regularly to improve reflective characteristics of the surfaces and to provide the proper visual environment. It is also important to keep windows clean in areas where they contribute to daytime illumination.

3 Glossary of terms

3.1 diffuser: A device used to redirect the illumination by the process of diffuse transmission.

3.2 footcandle: The unit of illumination when the foot is the unit of length. It is the illumination on a surface one square foot in area on which is uniformly distributed a flux of one lumen. It equals one lumen per square foot.

3.3 general lighting: Lighting designed to provide a uniform level of illumination throughout the area involved.

3.4 glare: The effect of brightness or brightness differences within the visual field sufficiently high to cause annoyance, discomfort, or loss in visual performance.

3.5 illuminance: The density of the luminous flux incident on a surface; it is the quotient of the luminous flux by the area of the surface when the latter is uniformly illuminated.

3.6 local lighting: Illumination provided over a relatively small area or confined space without any surrounding general lighting.

3.7 louver: A series of baffles used to shield a source from direct view at certain angles or to absorb unwanted light.

3.8 lumen: The unit of the time rate of flow of light (luminous energy) equal to the energy emitted through a unit solid angle (one steradian) from a uniform point source of one candela.

3.9 luminaire: A complete lighting unit consisting of a lamp or lamps together with the parts designed to distribute the light, to position and protect the lamps, and to connect the lamps to the power supply.

3.10 lux: The unit of illumination when the meter is the unit of length. It is the illumination on a surface one square meter in area on which is uniformly distributed a flux of one lumen. It equals one lumen per square meter.

3.11 reflector: A device used to redirect the light from a source primarily by the process of reflection.

3.12 refractor: A device used to redirect the illumination primarily by the process of refraction. (The bending of a ray of light as it passes obliquely from one medium to another in which its velocity is different.)

3.13 shielding angle (of a luminaire): The angle between a horizontal line through the light center and the line of sight at which the base source first becomes visible.

3.14 supplemental lighting: Lighting used to provide a specific amount or quality of illumination which cannot be readily obtained by the general lighting system, and which supplements the general lighting system.

3.15 visual task: Conventionally designates those details and objects that must be seen for the performance of a given activity, and includes the immediate background of the details or objects.

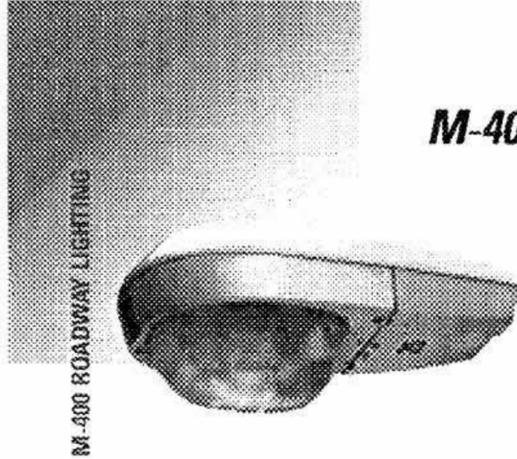

3.16 work plane: The plane at which work is done, and on which, illuminance is specified and measured. Unless otherwise indicated, this is assumed to be a horizontal plane 0.75 m (2.5 ft) above the floor.

M-400 ROADWAY LIGHTING

M-400A POWR/DOOR® LUMINAIRE

APPLICATIONS

- For street and parking lot lighting

SPECIFICATION FEATURES

- Powr/Module ballast assembly
- Filtered optics
- Standardized reflector
- Universal two or four-bolt slipfitter
- Die-cast aluminum housing with electrocoat gray paint finish
- "Dead back" tunnel type, FRP terminal board
- 2 in. pipe mounting only with MDRA
- Adjustable mogul base socket (house side) -- E39 standard
- ALGLAS® finish on reflector
- No-tool PE receptacle
- Plug-in ignitor available
- External paddle type stainless steel bail latch
- @/Ⓢ listed unit available— See Options
- Standard construction is IP55

M-250 ROADWAY LIGHTING

M-250R2 LUMINAIRE

APPLICATIONS

- For lower wattage roadway applications including residential streets, parking lots and other long, narrow areas

SPECIFICATION FEATURES

- Universal two-bolt slipfitter
- Die-cast aluminum housing with electrocoat gray paint finish
- Adjustable mogul base socket (street side) -- E39 standard
- No-tool PE receptacle
- Plug-in ignitor
- External stainless steel bail latch
- Standard construction is IP55
- Plastic pest guard standard (not required for 2 in. pipe)
- Ⓡ / Ⓢ listed for wet location available as an option

TURNPIKE™ LUMINAIRE

APPLICATIONS

- For roadways and parking lots

SPECIFICATION FEATURES

- Charcoal filtering
- ALGLAS® finish on aluminum reflector
- Front access via hinged/removable door
- Heavy-duty die-cast aluminum housing
- Electrocoat epoxidized acrylic dark bronze or gray paint finish on housing
- Steel trunnion with aiming degree marker

- Built-in aiming indicator
- Borosilicate glass lens
- Tray mounted ballast available
- Environment protected external hardware
- Terminal board
- Mogul base socket - E39 standard
- Slipfitter mounting available
- Standard construction is IP55
- Ⓢ / ⓈⓈ Listed for wet location available as an option

Fact Sheet

Using Windbreaks to Manage Odor from Livestock Facilities

Purpose

The purpose of this fact sheet is to help raise awareness of the opportunity to include windbreaks in the management of animal production facility odors. Also discussed are factors important to deciding if a windbreak is appropriate, as well as considerations for design.

Introduction

Over the past few decades, odor management has become an increasingly important issue in the livestock and poultry industries nationwide. The face of rural America has changed as production trends have shifted from small, diverse operations throughout the country to greater concentrations of large scale confined animal operations resulting in larger animal production facilities producing greater quantities of manure. The increased quantity of manure has the potential to produce more intense odor, more frequently and for longer duration.

At the same time, more people from urban areas have moved further out into rural areas. Numerous conflicts and legal actions have arisen throughout the country as a result of concerns about the impact these facilities have on quality of life, health, the environment, real estate values, communities and neighbor relations. The increased potential for litigation and conflict has resulted in a greater effort to manage odor emissions from livestock production facilities.

About Windbreaks

A windbreak is a planting of trees or shrubs designed to modify wind flow. NRCS has promoted windbreaks for the better part of the last century for a number of purposes that range from reducing soil erosion from wind, to managing snow, to protecting farmsteads, to storing carbon. Today people are beginning to explore the potential benefits windbreaks have for managing odor.

USDA NRCS Photo Gallery

What is a windbreak?

A windbreak is a planting of trees or shrubs made up of either single or multiple rows of vegetation grown to form a wind barrier.

Windbreaks can...

- *reduce wind erosion*
- *manage snow*
- *protect farmsteads*
- *store carbon*
- *reduce odors*
- *increase habitat*

Stand downwind from a windbreak on a windy day and their benefits are immediately apparent. A windbreak creates a protected zone on the downwind side that extends from 2 to 5 times the height of the vegetation. Reduction in wind speed, to some degree, can extend up to 10 times the height of the vegetation.

Windbreaks serve many purposes. They have commonly been used to protect farmsteads and operations from harsh winter winds.

About Livestock Odor

In livestock production, odors come primarily from land application areas, livestock operations with buildings or open lots, manure treatment/storage facilities or manure transport systems (Auvermann, 2002). Of these sources, surface application of hog manure is often cited as the biggest offender, followed by poultry and cattle feeding operations.

As the manure breaks down, hundreds of chemicals and chemical compounds are produced that combine to create that familiar manure smell. There is a general consensus that once these gases are emitted, if they travel any distance, they are primarily transported as attachments to dust particles.

'Large quantities of airborne dust are often found in and around animal confinement buildings' (Tyndall, 2000). The dust originates from a number of sources including feed, bedding materials and the animals themselves. Windbreaks have the potential to filter dust and reduce the movement of odor. While the limitations and benefits of using windbreaks to manage odor have yet to be fully evaluated, limited research and anecdotal evidence suggest that windbreaks can be effective tools in managing odors from livestock and poultry operations.

Odor Management Techniques

The animal production industry employs a variety of techniques to manage odor emissions from livestock and poultry facilities. The three main strategies for controlling livestock and poultry odor are:

1. *Prevention of odor through feed and manure additives, solid liquid separation, manure aeration and general good housekeeping*
2. *Capture and destruction of odorous chemicals using chemical scrubbers and biofilters*
3. *Collection, dispersion & dilution of odorous chemicals using windbreaks and shelterbelts (Tyndall, 2000)*

Windbreaks and Odor Management

As wind blows across a windbreak, a number of interactions occur that are beneficial not only for the management of wind and snow, but also for the management of odors. (Figure 1) These **interactions** include:

1. **Creation of zones of protection**
2. **Creation of an area of turbulence**
3. **Filtration**
4. **Redirection of the wind**

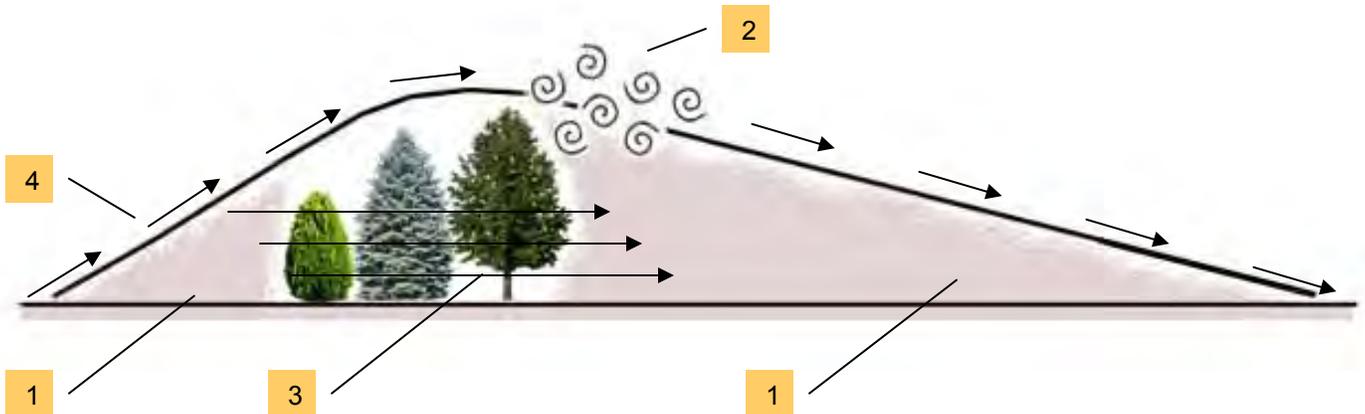

Figure 1 - Wind interacts with a windbreak in a number of ways.

These interactions can be used to manage dust and odors by designing and constructing windbreaks to:

1. Prevent odors and dust particles from being picked up by wind
2. Encourage deposition of dust particles that transport odors
3. Intercept and filter odors and dust particles already airborne
4. Disperse and dilute odors

Zone of Protection

The areas of still air or **zones of protection** created on the leeward side of a windbreak and a small zone of protection on the windward side are the most commonly recognized attributes of a windbreak. On the leeward side, the side downwind of a windbreak, an effective zone of protection extends for a distance of 2 to 5 times the height of the windbreak. A less effective but still significant reduction of wind speeds will exist up to 10 times the height of the windbreak. The zone of protection is most often used to protect farmsteads from strong winter winds. For managing odors, the zone of protection can be used to both **prevent odors from being picked up by the wind** and to encourage **deposition of dust particles** already carrying odors. (Figure 1)

Wind borne dust moving past odor sources such as open manure storage tanks, lagoons, open lots or fields where manure has recently been applied can pick up and transport odorous gases from these surfaces. Windbreaks located upwind of these odor sources would create a zone of protection to help prevent the dust and odors from being picked up and transported. (Figures 2 & 3)

Figure 2 – Open lots can be a source of particulates and odor.

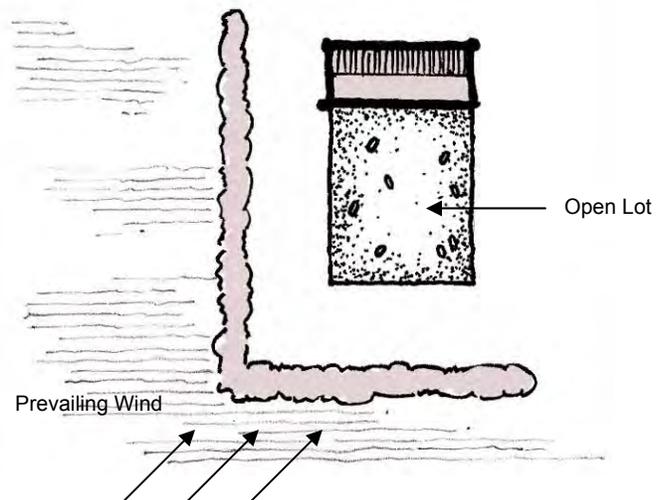

Figure 3 – A windbreak planted upwind of an open lot can reduce the movement of particulates and odor.

The decreased wind speed in the **zone of protection** can also be used to encourage **deposition** of dust particles carrying odors in the same way that windbreaks encourage the deposition of snow. The zone of protection created by a windbreak located downwind of an odor source promotes deposition of dust particles carrying odors. Deposition occurs when heavy dust particles drop out in the slower moving air.

Windbreak as Filter

When wind moves through a windbreak, the windbreak acts as a filter, trapping particulates. The leaves, branches and trunks of the vegetation **intercept and filter** dust and odor. Research suggests that vegetation such as conifers with complex leaf shapes and greater surface area collect particles more efficiently than deciduous vegetation.

Air that passes over dust and odor sources such as solid manure storage or fields where manure has recently been applied, or air that has been exhausted from mechanically vented livestock confinement buildings, will likely pick up dust and odors. Windbreaks can be located downwind of these odor sources and exhaust systems to **intercept** odor particles, **filtering** the air. (Figures 4 & 5)

USDA NRCS Illinois

Figure 4 – A windbreak in central Illinois is planted to filter particulates and odor exhausting from fans.

In addition, **filtration** can be used to **intercept** dust particles before they pass over a field where manure has been applied. Dust particles that adhere to the surface of leaves and branches are then not available to pick up or transport odors from fields where manure has been applied. At the same time the windbreak filters out dust particles about to blow across a field, a zone of protection is also created on the downwind side where deposition can occur and where reduced wind speeds will not pick up additional odor particles. (Figures 6 & 7)

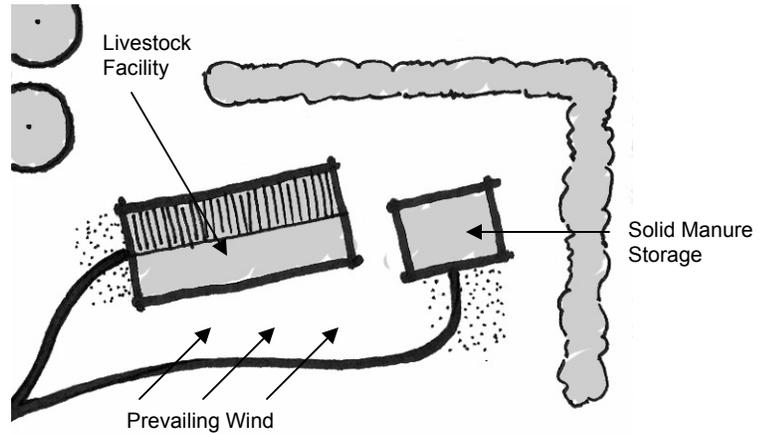

Figure 5 – Windbreak planned to filter and promote deposition of particulates coming from solid manure storage.

USDA NRCS Photo Gallery

Figure 6 – Windbreaks can act as filters for wind carrying particulates and odor. In addition, the zone of protection created by the windbreak prevents odors from being picked up and encourages dust particles to drop out downwind of the windbreak.

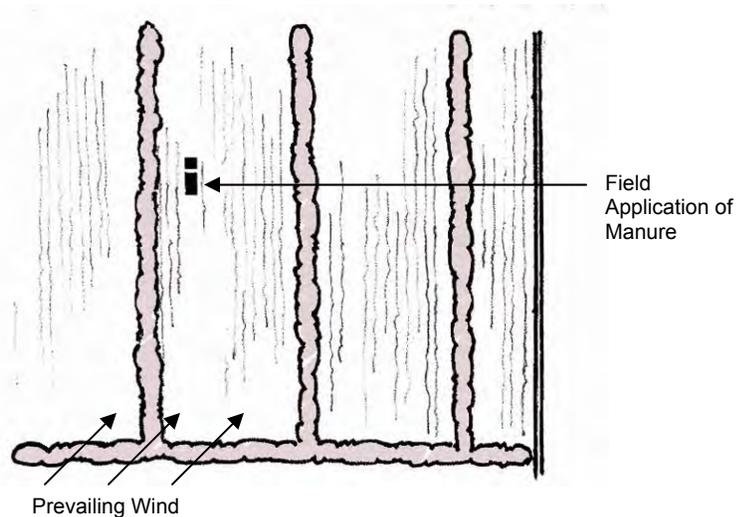

Figure 7 – Windbreak installed to prevent wind erosion. The windbreak also filters air as it moves through the windbreak, encourages deposition of particulates and prevents particulates from being picked up.

Turbulent Zone

In addition to the zone of protection, a turbulent zone is created at the top of a windbreak.

Once odors have been picked up from sources such as a production building or an open manure storage tank, a windbreak can redirect the wind up and over the trees, lifting dust and odors up into the lower atmosphere above people and residences where they would be regarded as offensive. At the same time, the turbulent zone at the peak of the windbreak has the potential to **dilute** and **disperse** odors, reducing their intensity and concentration. (Figure 8)

As wind is pushed up over the windbreak, air compresses and then expands while passing the crest of the windbreak creating an area of turbulent air. (Figure 1) Although not conclusive, the turbulence causes some of the air stream to mix into adjacent layers of air in the lower atmosphere allowing for some odor dispersion. Engineering models have shown that the turbulence contributes to a slower release of particulates into the downwind air stream diluting the odor plume.

Figure 8 – The turbulent zone of a windbreak has the potential to dilute and disperse odors picked up from sources such as manure storage tanks.

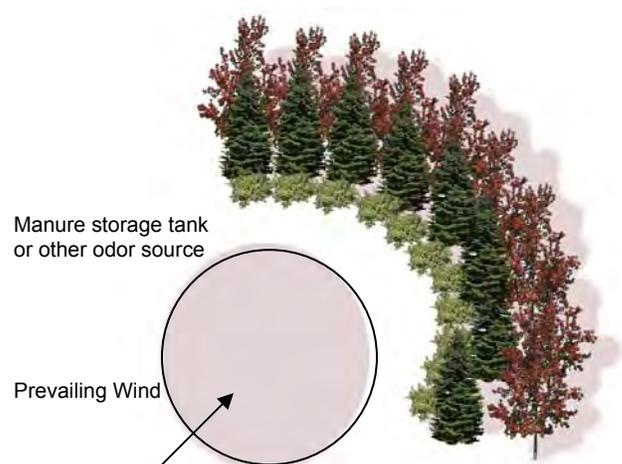

Figure 9 – Windbreak directs air stream into lower atmosphere and turbulent zone, diluting and dispersing odors.

Wedge Shaped Windbreak

Some research has indicated that wedge shaped windbreaks, with the tip of the wedge facing into the prevailing wind, can push airstreams higher into the atmosphere. (Tyndall, 2000)

A row or rows of shrubs, conifers and deciduous trees planted in combination would create a wedge shaped windbreak that would grow quickly, have branches and leaves at ground level and reach great heights.

Key Considerations for Windbreak Design

Understanding the benefits and limitations of using windbreaks to manage odor from animal manure is necessary to determine whether or not a windbreak is appropriate for a given odor management need or management style.

Benefits

For many, windbreaks are a familiar technology. For years NRCS has promoted and landowners have grown windbreaks. People know what they are. Many know how to establish and how to maintain them. Once established, they require regular maintenance to manage grass and weeds, monitor plant health and perform renovation when necessary. However, maintenance is generally minimal.

In addition, one windbreak has the potential to offer multiple benefits. At the same time a windbreak is working to manage odor from livestock facilities, the windbreak can also be working to conserve energy, reduce soil erosion, manage snow, provide shelter for livestock, habitat for wildlife and create visual screens.

As a windbreak screens unsightly facilities, appearance of the operation can be improved by softening buildings and visually breaking up the operation. The aesthetic benefit can be one of the most important benefits of a windbreak. Improved appearance has the potential to help maintain and improve relations with nearby residents.

Finally, compared to other technologies, windbreaks can be a low cost component of an odor management plan.

Limitations

Windbreaks alone will not completely prevent odor problems associated with animal manure. Depending on the odor management needs of a particular site, a windbreak may need to be used in conjunction with other odor management tools such as good housekeeping, food & manure additives, chemical scrubbers and bio-filters.

Another limitation of windbreaks is the time required for a windbreak to become fully functional. Windbreaks designed according to NRCS standards are considered to be at a fully functional height at 20 years. However, partial closure is achieved earlier and some benefit is realized before that point. Windbreaks that include fast growing deciduous trees can be functioning within as little as 5-10 years and reap aesthetic and screening benefits within just a few years. The public relations benefit of these windbreaks can occur immediately.

Planning Considerations

Once the decision has been made to use windbreaks, the following considerations will help determine where windbreaks could be located to effectively manage odor.

- Where are odors coming from?
- When are odors most likely to occur?
- Where are people located for whom odor would be a concern?
- What is the prevailing wind direction?
- From what direction does the wind blow during time(s) of year when odors are likely to be an issue?

The information is then used to identify locations where windbreaks could be located.

Potential locations should then be evaluated against other criteria such as snow deposition, location of utilities and other on-site infrastructure, ventilation requirements, movement of vehicles, aesthetics and possible future development.

The following section outlines design considerations important for locating a windbreak for odor management and selecting vegetation, as well as other general considerations.

Design Considerations

Prevailing Wind Direction

Prevailing wind direction is important in the design of any windbreak. Not only necessary to understanding the movement of odors, knowledge of the prevailing wind direction is also important for managing snow deposition and building ventilation. For accurate local information on prevailing winds in Illinois, refer to the Illinois State Climatologist Office's website - www.sws.uiuc.edu/atmos/statecli/Roses/wind_climatology.htm.

Snow Deposition and Roadways

Windbreaks should be located so snow deposited near them does not interfere with nearby roadways or buildings, inhibit onsite movement of vehicles, nor pose health or safety problems.

Identifying where snow will accumulate is important. Most of the snow deposited near a windbreak is deposited on the leeward side, within a distance that is 1 to 4 times the height of the windbreak. Snow also accumulates on the windward side for a distance of 1 to 2 times the height of the windbreak.

In addition, deep snowdrifts form closer to dense windbreaks. As windbreaks become less dense, snow settles progressively farther away and is distributed more evenly.

Drainage patterns of snowmelt must be taken into consideration. Drainage of snowmelt from the windbreak should not flow into the livestock area or cause erosion.

Building Ventilation

Air movement around buildings should be maintained for animal and worker health and to allow ventilation systems to work properly.

For mechanically ventilated systems, trees can be planted relatively close. The closer the vegetation is to the odor source the more effectively it reduces odors. However, the health of the trees, prevention of back pressure on fans and snow deposition must all be taken into consideration when determining the distance between the ventilation system and the windbreak.

With mechanically ventilated systems, the health of the trees is generally of primary concern. Exhaust from fans increases transpiration in vegetation making them vulnerable to desiccation. In addition, accumulation of debris and the gases exhausted by fans creates a harsh environment for vegetation to grow.

For naturally ventilated systems, the concern is typically with prevailing summer winds. Trees planted in the path of prevailing summer winds may interfere with needed summer air flows. Many producers prefer no vegetation on the side of the building from which prevailing summer winds come.

Root Systems

There is some concern that root systems of vegetation may damage artificial or natural liners of earthen pits or lagoons, resulting in leakage into the surrounding soil and waterways. If planting near such structures, the rooting habits of the species should be considered.

Likewise, location of subsurface drains should be considered during planning. If planting near subsurface drains is unavoidable, non-perforated conduit should be installed in the area where tree planting is planned.

Where concerns exist about competition between a windbreak and an adjacent field for water and nutrients a root plow can be used to sever roots and reduce competition. Root pruning will impact tree growth and must be done with care. Root pruning should be done at the drip line to minimize negative impacts and only one side should be pruned in a given year. Wait until the tree has reached the desired height before root pruning.

Vegetation

Field and farm windbreaks most commonly use conifers. Conifers are trees and shrubs bearing needles and cones and are mostly evergreen. Conifers have a large leaf surface area and generally maintain their branches all the way to the ground. Conifers create the densest windbreaks for blocking winds. These characteristics are useful for capturing particulates and for blocking winds that can pick up odors. However as a group, conifers tend to be slower growing than deciduous trees. The species favored by producers using windbreaks to manage odor are often fast growing deciduous trees such as hybrid willows, poplars and maples.

Deciduous trees, trees that lose their leaves in the winter, tend to grow faster and reach greater heights than conifers. To capture the benefits of conifers, deciduous trees and shrubs, both types of trees as well as shrubs may be planted in combination. Shrubs also tend to grow quickly.

- Tree and shrub species selected must be adapted to the soils, climate and site conditions. For information on species selection refer to the Conservation Tree/Shrub Suitability Index in the Natural Resources Conservation Service electronic Field Office Technical Guide - <http://efotg.nrcs.usda.gov/treemenuFS.aspx>. For additional information on vegetation characteristics refer to USDA's PLANTS Database at <http://plants.usda.gov>.
- Diversity of species in a windbreak lessens the negative impact of potential disease or pest outbreaks - problems which can devastate a windbreak composed of only one species. However, trees should be spaced so deciduous trees don't overtop conifers. Deciduous and coniferous trees should not be planted in the same row.
- Maximize particulate trapping by selecting species with high leaf surface roughness (leaf hairs, leaf veins, and small leaf size), complex leaf shapes, large leaf circumference to area ratios and medium to rapid growth rates.

Techniques are available to reduce the amount of time needed to establish a functioning windbreak.

- Supplemental watering and control of competition from grasses and weeds are critical for fast establishment and growth. Mulch, such as landscape fabric, herbicides and mowing are commonly used to control grass and weeds. Mowers can cause considerable damage and mortality to seedlings. Care should be taken if mowing is used.
- Fast growing species may be selected, such as hybrid poplars, willow and some maples. However, producers planting fast growing species need to be aware that their windbreaks will likely require replacement or renovation in 10-20 years. Faster growing tree species are often shorter lived.
- Trees within a row can be planted on a tighter spacing to achieve quicker results. However, thinning and removal of trees will be necessary as the windbreak matures, to prevent trees from dropping their lower limbs and creating holes in the windbreak.
- Larger stock can be used, such as air-root pruned potted planting stock. For more information on air-root pruned potted stock, see "Container grown" planting stock in NRCS practice standard TREE/SHRUB ESTABLISHMENT (612). A complete copy of the standard can be found at <http://efotg.nrcs.usda.gov/treemenuFS.aspx>.
- Poultry facilities using windbreaks to filter exhaust from fans commonly plant larger stock (8-10') to improve success rates. Seedlings often succumb to desiccation and the accumulation of debris & ammonia exhausted from buildings.
- Staggering tree spacing, so the trees of one row will be planted opposite the openings in the adjacent row, will decrease the time needed for a windbreak to be effective.

Density

All windbreaks impact airflow. Windbreaks promote deposition of dust particles, uplifting and dispersion of odors and filtering of wind. Higher density windbreaks are planted to encourage uplift as well as dispersion and deposition of dust particles. Lower density windbreaks are planted to encourage filtering by allowing more wind to pass through.

Factors that determine density include:

- Tree species
- Growth rates
- Spacing between trees
- Number of rows planted
- Rows that are staggered or are not staggered
- Time of year (Deciduous vegetation)

All of these factors can be manipulated to make a windbreak more or less dense.

Enhancing Aesthetics

Improved aesthetics and improved neighbor relations are often some of the most important benefits windbreaks provide. Windbreaks visually impact the overall rural landscape in addition to improving the appearance of the individual farmstead.

Trees add diversity and visual interest to the landscape and become part of the overall landscape pattern or structure. Vegetation can help soften and visually break up buildings, making them appear smaller and less industrial, as well as screen them from view.

Closer up, characteristics such as the form, color, texture and layout shape the windbreaks appearance and aesthetic. A curvilinear layout can help to blend a windbreak into the landscape. Deciduous trees, coniferous trees, and shrubs planted in the same planting have a different appearance and different texture than a windbreak planted with only coniferous trees or deciduous trees. Showy flowers and brilliant fall foliage add interest during the spring, summer and fall. Colorful fruit and the green of coniferous trees add color to the winter landscape.

Habitat Considerations

Windbreaks enhance wildlife habitat by providing shelter and food. If transfer of disease between wildlife and confined livestock, particularly poultry, is a concern, the risks and benefits of the windbreak need to be evaluated.

An argument exists that windbreaks have the potential to reduce airborne transmission of disease from one facility to another by capturing and preventing pathogens from moving downwind. In addition, there have been instances where raptors have taken up residence in windbreaks helping to keep down rodent populations.

Selecting vegetation that does not provide food or shelter preferred by wildlife may be one way to minimize the potential of disease transfer while realizing the benefits of a windbreak.

NRCS Windbreak Standard 380

For more detailed information on windbreak design refer to NRCS Windbreak/Shelterbelt Establishment Standard (380) and the NRCS Illinois Windbreak Manual. Many of the design considerations mentioned above are discussed in more detail in the standard. All standards referenced in the document are available at <http://efotg.nrcs.usda.gov/treemenuFS.aspx>.

<i>Section Two – Summary of Draft Environmental Report.....</i>	<i>2-1</i>
<i>Section Three – Comments, Responses, and Corrections to the Draft EIR</i>	<i>3-1</i>

SECTION ONE
INTRODUCTION

SECTION ONE – INTRODUCTION

CEQA Process

A Notice of Preparation (NOP) for the subject project was circulated on May 6, 2010. The NOP informed agencies of the County’s intent to prepare an environmental impact report (EIR). The 30-day review period for the NOP ended on June 4, 2010.

A Draft EIR and a Notice of Intent to Adopt an Environmental Impact Report (NOI) for Conditional Use Permit No. 09-07 was delivered to the State Clearinghouse and the Kings County Clerk-Recorder’s Office on May 4, 2012. The NOI was mailed and emailed to agencies, organizations and interested individuals on May 4, 2012 for a 45-day public review period. The NOI was published in the Hanford Sentinel newspaper on May 4, 2012, notifying the public of the availability of the Draft EIR and soliciting comments thereon. The 45-day public review period for the Draft EIR ended on June 18, 2012.

The Final EIR consists of (1) the Draft EIR and appendices; (2) any comments received concerning the Draft EIR; and (3) responses to these comments.

Responses to comments are directed to the disposition of significant environmental issues that are raised in the comments, as set forth in Section 15088(b) of the State Guidelines. When reviewing the comments and in developing responses thereto, every effort is made to compare the comment to the information contained in the Draft EIR. In most instances, responses are not provided to comments on non-environmental aspects of the proposed project. For comments not directed to significant environmental issues or in which the commenter simply notes agreement with the EIR, the responses indicate that the comment has been “noted and incorporated into the EIR”.

CEQA requires that a Final EIR be prepared, certified and independently considered by the decision-making body of the County prior to taking action on the project. The Final EIR provides the County with an opportunity to respond to comments on the Draft EIR and to incorporate any changes necessary to clarify and/or amplify information contained in the Draft EIR. This Final EIR will be available to any commenters for at least ten (10) days prior to its certification.

SECTION TWO
SUMMARY OF DRAFT EIR

SECTION TWO - SUMMARY OF DRAFT ENVIRONMENTAL IMPACT REPORT

Project Description

The existing Sozinho Dairy is currently milking 940 Holstein milk cows with a support stock of 710 for a total herd size of 1,650 head. The owner/applicant has applied for a conditional use permit (CUP) to increase the dairy to 1,650 Holstein milk cows and 3,466 support stock for a total herd size of 5,116 head. To accommodate the increased number of cows the dairy facility site will be expanded from 46.8 acres to 60.6 acres. The project site is located at 11447 8 ½ Avenue between Hanford-Armona Road and Houston Avenue (see Figures ES-1 and ES-2).

The proposed actions for which this Environmental Impact Report (EIR) is being prepared include:

- Approval by Kings County of a Conditional Use Permit (CUP 09-07);
- Acceptance by the California Regional Water Quality Control Board, Central Valley Region of a Report of Waste Discharge;
- Issuance of an Authority to Construct (ATC) and Permit to Operate (PTO) by the San Joaquin Valley Air Pollution Control District; and,
- Issuance of a Dairy Permit by the California Department of Food and Agriculture (CDFA).

Project Objective

It is the objective of the project to expand and operate an economically viable and competitive dairy facility in compliance with applicable laws and regulations, optimally utilizing the available land resource, and mitigating any environmental impacts to the extent feasible and as required by CEQA.

Summary of Impacts and Mitigation Measures

Section 15123(b)(1) of the *Guidelines for Implementation of the California Environmental Quality Act* (State CEQA Guidelines) provides that the summary shall identify each potentially significant effect with proposed mitigation measures that would reduce or avoid that effect. This information is summarized in Table ES-1, Summary of Potentially Significant Impacts, Mitigation Measures, and Mitigation Monitoring Agencies, at the end of this Executive Summary, and in Table ES-2, Summary of Impacts Which Remain Significant After Mitigation.

SOZINHO DAIRY
PROJECT LOCATION

Figure
ES - 2

Potential Areas of Controversy and Issues to be Resolved

The following issues are most likely to produce controversy in reviewing and considering the proposed project:

- Air Quality/Health Risks
- Greenhouse Gases
- Land Use and Planning
- Alternatives Analysis
- Cumulative Impacts

Alternatives to the Proposed Project

Section 15126.6 of the *State CEQA Guidelines* requires the EIR to describe a reasonable range of alternatives to the project or to the location of the project which would reduce or avoid significant impacts, and which could feasibly accomplish the basic objectives of the project, and to evaluate the comparative merits of the alternatives. Alternatives that would reduce or avoid significant impacts represent environmentally superior alternatives to the proposed project. However, if the environmentally superior alternative is the “no project” alternative, the EIR must also identify an environmentally superior alternative among the other alternatives.

The EIR evaluates the following alternatives:

- No Project – With this alternative the existing dairy facilities would not be expanded. This alternative does not achieve the basic project objective, although there would be no increase in dairy-related air quality, health risks, and greenhouse gases and water quality and land use impacts would be reduced. Impacts associated with contamination of row-crop or other agriculture would continue;
- Reduced Herd Size Alternative – Reduction of herd size and corresponding dairy facilities would effect roughly proportional reduction in air quality and health risks, although not to a less than significant level. This alternative would also decrease greenhouse gas emissions, lower the potential for groundwater degradation, and eliminate some of the land use violations.

Based upon the analysis contained and documented in this EIR, the No-Project Alternative is environmentally superior. Apart from this alternative, an assumed Reduced Herd Size Alternative (1,366 milk cows and 2,364 support stock) is, based upon the analysis contained and documented in this EIR, determined to be environmentally superior, although it only partially achieves the project objective and does not eliminate all significant impacts.

Impacts Summarization

Table ES-1 is a summary of impacts deemed not to be significant and of impacts that can be mitigated to less than significant along with the mitigation measures. Table ES-1 also notes the level of significance after mitigation, and the mitigation monitoring agency. Table ES-2 summarizes the impacts which remain significant after mitigation.

Chapter 7 presents the mitigation monitoring and reporting program. The mitigation monitoring and reporting program, to be considered by the Kings County Planning Commission at the time the EIR is certified, summarizes the environmental issues identified in the EIR, the mitigation measures required to reduce each potentially significant impact to less than significant, the person or agency responsible for implementing the measures and the agency or agencies responsible for monitoring and reporting on the implementation of the mitigation measures.

**Table ES-1
Summary of Potentially Significant Impacts and Mitigation Measures
Mitigation Monitoring and Reporting Program**

Impact No.	Impact	Page Number in EIR	Mitigation Number	Mitigation Measure	Level of Significance After Mitigation	Monitoring Agency
AIR QUALITY						
3.1.1	Toxic Air Emissions Health Risk	3-29 to 3-31	3.1.1.1	<p>The owner/applicant shall implement the following measures:</p> <ul style="list-style-type: none"> ▪ Cattle Housing Dust (PM_{2.5}) <ol style="list-style-type: none"> 1. Paved feedlanes, where present shall be a width of at least 8 feet along the corral side of the feedlane fence for milk and dry cows and at least 6 feet along the corral side of the feedlane for heifers; and 2. Scrape, vacuum, or flush concrete lanes in corrals at least once every day for mature cows and every 7 days for support stock. ▪ Dairy Equipment and Truck Exhaust Emissions - Nitrogen Oxide (NOx) <ol style="list-style-type: none"> 1. The idling time of all equipment used at the site shall not exceed five minutes; 2. As much as possible, alternative fueled or catalyst-equipped diesel equipment shall be used at the dairy site; 3. Electrically driven equivalents to fossil-fueled equipment shall be utilized when 	Significant	<ul style="list-style-type: none"> ▪ Community Development Agency ▪ San Joaquin Valley Air Pollution Control District

3.1-8	Ammonia (NH₃) Emissions	3-38 to 3-39	None	No additional measures are required; all feasible control measures have been incorporated in SJVAPCD's Rule 4570 (see Appendix D), and in Dairy Element Policies DE 4.1a through DE 4.2b (see Appendix F).	Significant	<ul style="list-style-type: none"> ▪ Community Development Agency ▪ San Joaquin Valley Air Pollution Control District
3.1-9	Odor Emissions	3-39 to 3-42	3.1.9	No additional measures are required; all feasible control measures have been incorporated in the Dairy Element Policies DE 4.1a, DE 4.1b, DE 4.1d and DE 5.1b(see Appendix D), in the SJVAPCD's Rule 4550 and 4570 (see Appendix F).	Significant	None
3.1-10	Local Carbon Monoxide (CO) Concentrations	3-43	None	None are required.	Less than Significant	None
3.1-11	Ambient Air Quality	3-43 to 3-44	None	No additional measures are required; all feasible control measures have been incorporated in the SJVAPCD's Rules 4550 and 4570 (see Appendix D); in Dairy Element Policies DE 5.1d, DE 5.1e, DE 5.1f, DE 5.1g, and DE 5.1h (see Appendix F); and Mitigation Measure #3.1.1 (pages 3-30 and 3-31) and Mitigation Measure #3.3.2 on page 3-58 - 3-60.	Significant	None
GREENHOUSE GASES						
3.2.1	Greenhouse Gases	3-48 to 3-52	None	No project level mitigation measures are required.	Less than Significant	None

Impact No.	Impact	Page Number in EIR	Mitigation Number	Mitigation Measure	Level of Significance After Mitigation	Monitoring Agency
LAND USE AND PLANNING						
3.3.1	Separation of Dairy Facilities by ¼ Mile	3-54	3.3.1	No additional measures are required; all feasible control measures have been included in Mitigation Measure #3.3.2 and the compliance with the required mitigation measures required in the Kings County Dairy Element.	Less than Significant	None
3.3.2	Residences Within ¼ Mile of Dairy Facility	3-55 to 3-56	3.3.2	The owner/operator shall install and maintain a downwind windbreak shelterbelt along the east and south boundary of the project site. This windbreak consisting of evergreen shrubs and trees, to meet the USDA National Research Conservation Service (NRCS) Windbreak Shelterbelt Establishment Standard (380)	Significant	Community Development Agency
GREENHOUSE GASES						
5.2	Greenhouse Gases	5-7 to 5-11	5.2	The State of California Climate Action Team has listed various measures which will impact GHG emissions; other measures have been suggested by the SJV APCD. The following mitigation measures, commonly recommended to reduce VOC's, are suggested, although there is no available data on which to base an analysis of the efficiency of their implementation in greenhouse gas emissions reduction: 1. Convert the milking barn facilities to be energy efficient with respect to space heating/cooling and building insulation, install energy efficient heating/cooling equipment there, and use fluorescent and/or LED lighting throughout the facility;	Cumulatively Significant, Considerable and Unavoidable	Community Development Agency San Joaquin Valley Air Pollution Control District

Impact No.	Impact	Page Number in EIR	Mitigation Number	Mitigation Measure	Level of Significance After Mitigation	Monitoring Agency
			2.	Maintain an impervious covering on silage and manure piles year-round;		
			3.	Include dietary aids (e.g., cottonseed) in feed rations;		
			4.	Incorporate solid manure into fields within two hours after application;		
			5.	Feed according to National Research Council (NRC) guidelines;		
			6.	Remove feed at least once every 14 days from areas where animals stand to eat;		
			7.	Feed or dispose of rations within 48 hours of grinding and mixing;		
			8.	Store grain in a weatherproof storage structure from October through May;		
			9.	Cover horizontal surfaces of silage piles, except areas where feed is being removed;		
			10.	Flush or hose the milk parlor immediately prior to, immediately after, or during each milking;		
			11.	Flush freestalls more frequently than the milking schedule;		
			12.	Inspect water pipes and troughs and repair leaks at least once every 14 days;		

Impact No.	Impact	Page Number in EIR	Mitigation Number	Mitigation Measure	Level of Significance After Mitigation	Monitoring Agency
			13.	Clean corrals at least once between April and July and at least once between October the December;		
			14.	Manage corrals such that animal waste depth in corrals does not exceed 12 inches, except for in-coral mounding;		
			15.	Maintain surfaces of corrals and dry lots so that puddles do not form and remain more than 48 hours;		
			16.	Harrow, rake, or scrape pens sufficiently to maintain a dry surface;		
			17.	Install corral shade structures uphill of any slope;		
			18.	Not allow liquid animal waste to stand in the field more than 24 hours after irrigation;		
			19.	Apply no solid animal waste with a moisture content of 50% or more;		
			20.	Remove animal waste from the dairy facility within seventy-two (72) hours of removal from the pens or corrals;		
			21.	Cover dry animal waste piles outside the pens with a weatherproof covering from October through May, except for times, not to exceed 24 hours per event, when wind events remove the covering;		

Impact No.	Impact	Page Number in EIR	Mitigation Number	Mitigation Measure	Level of Significance After Mitigation	Monitoring Agency
				<p>22. Remove solids from the waste system with a solid separator system prior to the waste entering the lagoon;</p> <p>23. Choose, to the extent feasible and practical, recycled, low-carbon and otherwise climate-friendly building materials such as salvaged and recycled-content materials for buildings, hard surfaces and non-plant landscaping; and</p> <p>24. Minimize, reuse and recycle construction-related waste.</p>		

Table ES-2
Summary of Impacts Which Remain Significant After Mitigation

Air Quality		
3.1.1	Toxic Air Emissions Health Risk	Significant
3.1.4	Operational Emission of Criteria Pollutants, PM _{2.5}	Significant
3.1.5	Operational Emission of Criteria Pollutants, Volatile Organic Compounds (VOCs)	Significant
3.1.6	Operational Emission of Criteria Pollutants, Nitrogen Oxide (NOx)	Cumulatively Significant, Considerable and Unavoidable
3.1.7	Methane Emissions	Significant
3.1.8	Ammonia Emissions	Significant

Greenhouse Gases		
5.2	Greenhouse Gases	Cumulatively Significant, Considerable and Unavoidable

SECTION THREE

COMMENTS, RESPONSES, AND CORRECTIONS TO DEIR

SECTION THREE – COMMENTS, RESPONSES, AND CORRECTIONS TO THE DRAFT EIR

The Draft EIR was mailed to agencies, organizations and interested individuals on May 4, 2012 to begin the 45-day review period.

On May 25, 2012 the Kings County Community Development Agency (CDA) received a comment on the Sozinho Dairy Expansion Draft EIR from the Native American Heritage Commission, dated May 21, 2012. A copy of this letter was also filed with the State of California Governor's Office of Planning and Research, State Clearinghouse and Planning (State Clearinghouse) on May 29, 2012.

The following pages contain copies of the State Clearinghouse letter acknowledging that the CDA has complied with California Environmental Quality Act (CEQA) review requirements for the Sozinho Dairy Expansion Draft EIR (page 3-2), a copy of the Native American Heritage Commission's comment letter on the Draft EIR (Page 3-4), and the response to comments prepared by CDA (page 3-8)

The Project Description on Page ES-1 of the Draft EIR contained a bulleted list of the proposed actions for which the Environmental Impact Report (EIR) was being prepared. The last bullet erroneously listed the issuance of a Kings County Health "Permit to Operate". The Environmental Health Services (EHS) Division of the Kings County Health Department confirmed on June 28, 2012, that EHS does not issue a "Permit to Operate" in relation to an expansion of an existing dairy. In order to correct this error the following correction is being made to the bulleted list (of the proposed actions for which the Environmental Impact Report (EIR) was being prepared) on Page ES-1 of the Draft EIR:

"The proposed actions for which this Environmental Impact Report (EIR) is being prepared include:

- Approval by Kings County of a Conditional Use Permit (CUP 09-07);
- Acceptance by the California Regional Water Quality Control Board, Central Valley Region of a Report of Waste Discharge;
- Issuance of an Authority to Construct (ATC) and Permit to Operate (PTO) by the San Joaquin Valley Air Pollution Control District;
- Issuance of a Dairy Permit by the California Department of Food and Agriculture (CDFA); and
- ~~Issuance of a Kings County Environmental Health "Permit to Operate".~~

Subject: Conditional Use Permit No. 09-07 (Sozinho)
SCH#: 2010051016

Dear Sandy Roper:

The State Clearinghouse submitted the above named Draft EIR to selected state agencies for review. On the enclosed Document Details Report please note that the Clearinghouse has listed the state agencies that reviewed your document. The review period closed on June 15, 2012, and the comments from the responding agency (ies) is (are) enclosed. If this comment package is not in order, please notify the State Clearinghouse immediately. Please refer to the project's ten-digit State Clearinghouse number in future correspondence so that we may respond promptly.

Please note that Section 21104(c) of the California Public Resources Code states that:

"A responsible or other public agency shall only make substantive comments regarding those activities involved in a project which are within an area of expertise of the agency or which are required to be carried out or approved by the agency. Those comments shall be supported by specific documentation."

These comments are forwarded for use in preparing your final environmental document. Should you need more information or clarification of the enclosed comments, we recommend that you contact the commenting agency directly.

This letter acknowledges that you have complied with the State Clearinghouse review requirements for draft environmental documents, pursuant to the California Environmental Quality Act. Please contact the State Clearinghouse at (916) 445-0613 if you have any questions regarding the environmental review process.

Sincerely,

Scott Morgan
Director, State Clearinghouse

Type EIR Draft EIR STATE CLEARINGHOUSE AND PLANNING UNIT
Description The proposed project consists of expanding and operating an economically viable and competitive dairy facility in compliance with applicable laws and regulations, optimally utilizing the available land resource, and mitigating any environmental impacts to the extent feasible and as required by CEQA. The owner/operator of the Sozinho Dairy is currently permitted for a 940 Holstein milk cow dairy and has applied to Kings County for CUP No. 09-07 to expand the number of Holstein milk cows to 1,650 head. The expansion involves two phases. The first phase includes shade barns, calf pens, calf shade barns, a lagoon, a settling pond, lighting replacements, and equipment storage. The second phase includes shade barns, calf pens, hay barns, a concrete silage pad, and a commodity barn. The dairy facility is located on APNs 016-150-011, 047, 048, 058, 059, 074, & 075.

 Hanford, CA 93230

Re: SCH#2010051016, CEQA Notice of Completion, draft Environmental Impact Report (DEIR) for the "Conditional Use Permit No. 09-07 (Sozinho) (Dairy Facility) Project," located in the Hanford Area, Kings County, California.

Dear Ms. Roper:

The Native American Heritage Commission (NAHC), the State of California 'Trustee Agency' for the protection and preservation of Native American cultural resources pursuant to California Public Resources Code §21070 and affirmed by the Third Appellate Court in the case of EPIC v. Johnson (1985: 170 Cal App. 3rd 604).

This letter includes state and federal statutes relating to Native American historic properties of religious and cultural significance to American Indian tribes and interested Native American individuals as 'consulting parties' under both state and federal law. State law also addresses the freedom of Native American Religious Expression in Public Resources Code §5097.9.

The California Environmental Quality Act (CEQA – CA Public Resources Code 21000-21177, amendments effective 3/18/2010) requires that any project that causes a substantial adverse change in the significance of an historical resource, that includes archaeological resources, is a 'significant effect' requiring the preparation of an Environmental Impact Report (EIR) per the CEQA Guidelines defines a significant impact on the environment as 'a substantial, or potentially substantial, adverse change in any of physical conditions within an area affected by the proposed project, including ... objects of historic or aesthetic significance.' In order to comply with this provision, the lead agency is required to assess whether the project will have an adverse impact on these resources within the 'area of potential effect (APE), and if so, to mitigate that effect. The NAHC did conduct a Sacred Lands File (SLF) search within the 'area of potential effect (APE) and Native American cultural resources were not identified.

The NAHC 'Sacred Sites,' as defined by the Native American Heritage Commission and the California Legislature in California Public Resources Code §§5097.94(a) and 5097.96. Items in the NAHC Sacred Lands Inventory are confidential and exempt from the Public Records Act pursuant to California Government Code §6254 (r).

Early consultation with Native American tribes in your area is the best way to avoid unanticipated discoveries of cultural resources or burial sites once a project is underway. Culturally affiliated tribes and individuals may have knowledge of the religious and cultural significance of the historic properties in the project area (e.g. APE). We strongly urge that you make contact with the list of Native American Contacts on the attached list of Native American

contacts, to see if your proposed project might impact Native American cultural resources and to obtain their recommendations concerning the proposed project. Pursuant to CA Public Resources Code § 5097.95, the NAHC requests cooperation from other public agencies in order that the Native American consulting parties be provided pertinent project information. Consultation with Native American communities is also a matter of environmental justice as defined by California Government Code §65040.12(e). Pursuant to CA Public Resources Code §5097.95, the NAHC requests that pertinent project information be provided consulting tribal parties. The NAHC recommends *avoidance* as defined by CEQA Guidelines §15370(a) to pursuing a project that would damage or destroy Native American cultural resources and Section 2183.2 that requires documentation, data recovery of cultural resources.

Furthermore, the NAHC if the proposed project is under the jurisdiction of the statutes and regulations of the National Environmental Policy Act (e.g. NEPA; 42 U.S.C. 4321-43351). Consultation with tribes and interested Native American consulting parties, on the NAHC list, should be conducted in compliance with the requirements of federal NEPA and Section 106 and 4(f) of federal NHPA (16 U.S.C. 470 *et seq.*), 36 CFR Part 800.3 (f) (2) & .5, the President's Council on Environmental Quality (CSQ, 42 U.S.C 4371 *et seq.* and NAGPRA (25 U.S.C. 3001-3013) as appropriate. The 1992 *Secretary of the Interiors Standards for the Treatment of Historic Properties* were revised so that they could be applied to all historic resource types included in the National Register of Historic Places and including cultural landscapes. Also, federal Executive Orders Nos. 11593 (preservation of cultural environment), 13175 (coordination & consultation) and 13007 (Sacred Sites) are helpful, supportive guides for Section 106 consultation. The aforementioned Secretary of the Interior's *Standards* include recommendations for all 'lead agencies' to consider the historic context of proposed projects and to "research" the cultural landscape that might include the 'area of potential effect.'

Confidentiality of "historic properties of religious and cultural significance" should also be considered as protected by California Government Code §6254 (r) and may also be protected under Section 304 of the NHPA or at the Secretary of the Interior discretion if not eligible for listing on the National Register of Historic Places. The Secretary may also be advised by the federal Indian Religious Freedom Act (cf. 42 U.S.C., 1996) in issuing a decision on whether or not to disclose items of religious and/or cultural significance identified in or near the APEs and possibility threatened by proposed project activity.

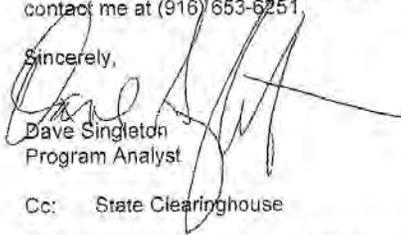

Furthermore, Public Resources Code Section 5097.98, California Government Code §27491 and Health & Safety Code Section 7050.5 provide for provisions for inadvertent discovery of human remains mandate the processes to be followed in the event of a discovery of human remains in a project location other than a 'dedicated cemetery'.

To be effective, consultation on specific projects must be the result of an ongoing relationship between Native American tribes and lead agencies, project proponents and their contractors, in the opinion of the NAHC. Regarding tribal consultation, a relationship built around regular meetings and informal involvement with local tribes will lead to more qualitative consultation tribal input on specific projects.

Finally, when Native American cultural sites and/or Native American burial sites are prevalent within the project site, the NAHC recommends 'avoidance' of the site as referenced by CEQA Guidelines Section 15370(a).

If you have any questions about this response to your request, please do not hesitate to contact me at (916) 653-6251.

Sincerely,

Dave Singleton
Program Analyst

This list is current only as of the date of this document.

Distribution of this list does not relieve any person of the statutory responsibility as defined in Section 7050.5 of the Health and Safety Code, Section 5097.94 of the Public Resources Code and Section 5097.98 of the Public Resources Code.

This list is applicable for contacting local Native Americans with regard to cultural resources for the proposed SCH#2010051016; CEQA Notice of Completion, draft Environmental Impact Report (DEIR) for the Conditional Use Permit No. 09-07 (Sozinho) (Dairy Facility) Project, located in the Hanford Area; Kings County, California.

Response to Comments

In compliance with the Dairy Element the owner/operator prepared and submitted the Sozinho Dairy Technical Report to the Kings County Community Development Agency on August 31, 2009 (a copy of this report was enclosed as Appendix H in the Draft EIR). Contained in the technical report was a *Cultural Resources Evaluation by the California Resources Information System* (see page 3-9). As part of the cultural resources evaluation, the Native American Heritage Commission (NAHC) was advised of the proposed project. The dairy owner/operator and agent Western Dairy Design Associates, Inc., noted in their cultural resources evaluation that:

All the Native American individuals/organizations on list which the NAHC provided were contacted by letter, FAX or telephone. The chairman of the Kings River Choinumni Farm Tribe has responded by telephone, and the cultural resources director of the Table Mountain Rancheria sent a letter, both saying that the dairy is outside their tribes' area.

The documents contained in the technical report and reproduced in pages 3-9 through 3-18 in this Final EIR demonstrate that all of the NAHC recommendations have been addressed.

7. Cultural Resources Evaluation by the California Historic Resources Information System (CHRIS)

A review of records of known cultural resources has been completed by the California Historical Resources Information System (CHRIS). This review (*see Attachment 7*) revealed that:

"There are no recorded cultural resources within the project area and it is not known if resources exist there. There are no recorded cultural resources within a ½ mile radius of the project area. Please note that a lack of data does not indicate negative data.

There are no known cultural resources within the project area, or the immediate vicinity that are listed in the National Register of Historic Places, the California Register, California Inventory of Historic Resources, California Points of Historical Interest, or the California State Historic Landmarks".

The CHRIS letter recommended:

We understand that unpermitted construction has already occurred. In these areas, no further archaeological investigation is needed. The current condition of the lands where new construction is proposed was not specified. If these lands are vacant and have never been developed, including placement of underground utilities, we recommend that a professional archaeologist conduct a field survey of the areas prior to ground disturbance activities. Please note that agriculture does not constitute development..."

A record search has also been completed by the Native American Heritage Commission (NAHC). This review (*see Attachment 7*)

*"The NAHC SLF search **did not indicate** the presence of several Native American cultural resources within one-half mile radius of the propojects (APE) planting sites.*

Early consultation with Native American tribes in your area is the best way to avoid unanticipated discoveries once a project is underway. Enclosed are the names of the nearest tribes and interested Native American individuals that the NAHC recommends as 'consulting parties' for this purpose, that may have knowledge of the religious and cultural significance of the historic properties in the project area. (e.g. APE). We recommend that you contact persons on the attached list of Native American contacts,

All the Native American individuals/organizations on the list which the NAHC provided were contacted by letter, FAX or telephone. The chairman of the Kings River Choinumni Farm Tribe has responded by telephone, and the cultural resources director of the Table Mountain Rancheria sent a letter, both saying that the dairy is outside their tribes' area.

A copy of the Kings County Historical Sites Map from the County Dairy Element is included in *Attachment 7*. The dairy is not near any historic site indicated on the map.

The Information Center is under contract to the State Office of Historic Preservation and is responsible for the local management of the California Historical Resources Inventories. The Center is funded by research fees and a grant from the State Office of Historic Preservation. The Information Center does not conduct fieldwork and is not affiliated with any archaeological consultants who conduct fieldwork. A referral list of individuals who meet the Secretary of the Interior's standards for their profession is available at www.chrisinfo.org.

CULTURAL RESOURCES RECORDS SEARCH

The following are the results of a search of the cultural resources files at the Southern San Joaquin Valley Information Center. These files include known and recorded archaeological and historic sites, inventory and excavation reports filed with this office, and properties listed on the National Register of Historic Places, the California Register, the Historic Property Data File (10/23/09), the California Historical Landmarks, the California Inventory of Historic Resources, and the California Points of Historical Interest.

PRIOR CULTURAL RESOURCE INVENTORIES CONDUCTED WITHIN THE PROJECT AREA AND A ONE-HALF MILE RADIUS

There have been no previous cultural resource studies conducted within the project area. There has been one (1) cultural resource studies conducted within a one-half mile radius, KI-5.

(RS # 09-419)

**KNOWN AND/OR RECORDED CULTURAL RESOURCES WITHIN THE PROJECT
AREA AND A ONE-HALF MILE RADIUS**

There are no recorded cultural resources within the project area and it is not known if resources exist there. There are no recorded cultural resources within a one-half mile radius of the project area. Please note that a lack of data does not indicate negative data.

There are no known cultural resources within the project area or the immediate vicinity that are listed in the National Register of Historic Places, the California Register, California Inventory of Historic Resources, the California Points of Historical Interest, or the California State Historic Landmarks.

RECOMMENDATIONS

We understand that unpermitted construction has already occurred. In these areas, no further archaeological investigation is needed. The current condition of the lands where new construction is proposed was not specified. If these lands are vacant and have never been developed, including placement of underground utilities, we recommend a professional archaeologist conduct a field survey of the areas prior to ground disturbance activities. Please note that agriculture does not constitute development. A referral list is available at www.chrisinfo.org. If you have any questions, comments, or need any additional information, please don't hesitate to contact our office at (661) 654-2289.

Re: Request for a Sacred Lands File Search and Native American Contacts List for a Proposed, Sozinho Dairy Expansion Project, located in the Hanford Area, Kings County, California

Dear Mr. Fleming:

The Native American Heritage Commission (NAHC), the State of California 'Trustee Agency' for the protection and preservation of Native American cultural resources (c.f. CA Public Resources Code §21070), was able to perform a record search of its Sacred Lands File (SLF) for the affected project area (APE) requested. The California Environmental Quality Act (CEQA; CA Public Resources Code Section 21000 – 21177) requires that any project that causes a substantial adverse change in the significance of an historical resource, that includes archaeological resources, is a 'significant effect' requiring the preparation of an Environmental Impact Report (EIR) per the California Code of Regulations §15064.5(b)(c)(f) CEQA guidelines. Section 15382 of the 2007 CEQA Guidelines defines a significant impact on the environment as "a substantial, or potentially substantial, adverse change in any of physical conditions within an area affected by the proposed project, including ... objects of historic or aesthetic significance." The NAHC SLF search **did not indicate** the presence of several Native American cultural resources within one-half - mile radius of the proposed projects (APE) planting sites.

This letter includes state and federal statutes relating to Native American historic properties of religious and cultural significance to American Indian tribes and individuals as 'consulting parties' under both state and federal law.

Early consultation with Native American tribes in your area is the best way to avoid unanticipated discoveries once a project is underway. Enclosed are the names of the nearest tribes and interested Native American individuals that the NAHC recommends as 'consulting parties,' for this purpose, that may have knowledge of the religious and cultural significance of the historic properties in the project area (e.g. APE). We recommend that you contact persons on the attached list of Native American contacts. In particular, we urge consultation with Keith Turner, Jim Redmoon and Bob Pennell. A Native American Tribe or Tribal Elder may be the only source of information about a cultural resource. Furthermore we suggest that you contact the California Historic Resources Information System (CHRIS) at the Office of Historic Preservation Coordinator's office (at (916) 653-7278, for referral to the nearest Information Center of which there are 11..

Consultation with tribes and interested Native American consulting parties, on the NAHC list, should be conducted in compliance with the requirements of federal NEPA (42 U.S.C. 4321-43351) and Section 106 and 4(f) of federal NHPA (16 U.S.C. 470 (f) *et seq.*), and NAGPRA (25 U.S.C. 3001-3013), as appropriate.

Lead agencies should consider avoidance, as defined in Section 15370 of the California Environmental Quality Act (CEQA) when significant cultural resources could be affected by a

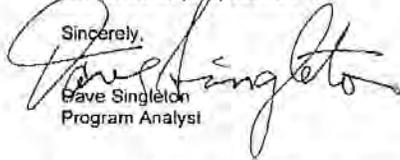

408

project. Also, Public Resources Code Section 5097.98 and Health & Safety Code Section 7050.5 provide for provisions for accidentally discovered archeological resources during construction and mandate the processes to be followed in the event of an accidental discovery of any human remains in a project location other than a 'dedicated cemetery. Discussion of these should be included in your environmental documents, as appropriate.

The response to this search for Native American cultural resources is conducted in the NAHC Sacred Lands Inventory, established by the California Legislature (CA Public Resources Code §5097.94(a) and is exempt from the CA Public Records Act (c.f. California Government Code §6254.10) although Native Americans on the attached contact list may wish to reveal the nature of identified cultural resources/historic properties. Confidentiality of "historic properties of religious and cultural significance" may also be protected the under Section 304 of the NHPA or at the Secretary of the Interior' discretion if not eligible for listing on the National Register of Historic Places. The Secretary may also be advised by the federal Indian Religious Freedom Act (cf. 42 U.S.C. 1996) in issuing a decision on whether or not to disclose items of religious and/or cultural significance identified in or near the APE and possibly threatened by proposed project activity

If you have any questions about this response to your request, please do not hesitate to contact me at (916) 653-6251.

Sincerely,

Dave Singleton
Program Analyst

COUNTY OF KINGS, STATE OF CALIFORNIA**

**IN THE MATTER OF APPROVING)
CONDITIONAL USE PERMIT NO. 09-07)
CONCERNING MERGING, REMODELING,))
AND EXPANDING TWO EXISTING DAIRY)
FACILITIES)**

RESOLUTION NO. 12-12

**RE: SOZINHO DAIRY
EXPANSION PROJECT**

WHEREAS, an application was submitted on October 2, 2009, by Western Dairy Design for Conditional Use Permit (“CUP”) No. 09-07, a proposal to merge, remodel and expand two existing dairy facilities; and

WHEREAS, the Sozinho Dairy Expansion Project is located at 11447 8 1/2 Avenue, Hanford; and

WHEREAS, the Notice of Preparation/Initial Study (“NOP/IS”) of a Draft Environmental Impact Report for the Sozinho Dairy Expansion Project (“Draft EIR”) was distributed by the Kings County Community Development Agency (“Community Development Agency”) and circulated for a 30-day public review period on May 5, 2010; and

WHEREAS, the existing conditions described in the Draft EIR reflect the physical environmental conditions in existence at the time the NOP/IS was distributed; and

WHEREAS, the Community Development Agency received comments on the NOP/IS for the Draft EIR; and

WHEREAS, the Community Development Agency determined that the preparation of an EIR was appropriate due to potentially significant environmental impacts that could be caused by implementing the Project; and

WHEREAS, a Notice of Intent to Adopt an Environmental Impact Report was published on May 4, 2012, providing notice that the Draft EIR had been completed and was available for public review and comment; and

WHEREAS, the Draft EIR was published and circulated for public comments from May 4, 2012, to June 18, 2012; and

WHEREAS, the Community Development Agency distributed copies of the Draft EIR to those public agencies that have jurisdiction by law with respect to the Project, as well as to other interested persons and agencies, and sought the comments of such persons and agencies; and

WHEREAS, following closure of the public comment period, the Draft EIR was supplemented to incorporate comments received by the Community Development Agency and the Community Development Agency’s responses to such comments; and

WHEREAS, the Final Environmental Impact Report for CUP 09-07 for the Sozinho Dairy Expansion Project (“Final EIR”) consists of the following information: comments and recommendations received on the Draft EIR, a list of persons, organizations, and public agencies commenting on the Draft EIR, the responses of the Community Development Agency to significant environmental points raised in the review and consultation process, any other information added by the Planning Commission; and the Draft EIR, including the technical appendices; and

WHEREAS, on October 26, 2012, a public notice of Final EIR availability and of the Kings County Planning Commission’s (“Planning Commission”) scheduled November 5, 2012, public hearing on the Final EIR, was mailed to all Responsible Agencies, interested groups, organizations and persons, including all persons and agencies that had commented on the Draft EIR; and

WHEREAS, on October 26, 2012, the Kings County Community Development Agency made a recommendation to the Planning Commission that the Final EIR was adequate; and

WHEREAS, on November 5, 2012, the Planning Commission held a duly noticed public hearing on CUP 09-07 in the Board of Supervisors Chambers of the Kings County Government Center, 1400 W. Lacey Blvd., Hanford, California; and

WHEREAS, at the November 5, 2012, public hearing the Planning Commission received a report presented by County staff that included recommendations; and

WHEREAS, the Planning Commission received testimony prior to the close of the public hearing; and

WHEREAS, in order to approve CUP 09-07 the Planning Commission is required to make the following findings and certifications with regards to the California Environmental Quality Act: (1) The Final Environmental Impact Report prepared for this project is adequate; (2) feasible and reasonable alternatives were evaluated and found not to be superior to the approved project; (3) the Final EIR has been completed in compliance with CEQA; (4) the Final EIR reflects the Planning Commission’s independent judgment; and (5) the Planning Commission reviewed and considered the information in the Final EIR before approving the project; and

WHEREAS, the Planning Commission has reviewed the Final EIR in its entirety, and has determined that the document reflects the independent judgment of the County; and

WHEREAS, the Final EIR identified certain significant effects on the environment that, absent the adoption of mitigation measures, would be caused by the construction and operation of the Project; and

WHEREAS, the Planning Commission is required, pursuant to CEQA, to adopt all feasible mitigation measures or feasible project alternatives that can substantially lessen or avoid any significant project-related environmental effects; and

WHEREAS, as demonstrated by the CEQA Findings of Fact and Statement of Overriding Considerations attached as Exhibit 1 to this Resolution, many of the Project’s significant environmental effects can be either substantially lessened or avoided through the adoption of feasible mitigation measures, although some of these effects will remain significant and unavoidable despite the adoption of all feasible mitigation measures; and

WHEREAS, because the adoption of all feasible mitigation measures cannot substantially lessen or avoid all significant effects on the environment associated with the Project, the Planning Commission must consider the feasibility of alternatives, as set forth in the Final EIR, that will be less environmentally damaging than the Project with respect to the unavoidable significant effects associated with the Project; and

WHEREAS, the Planning Commission has determined, for reasons set forth in Exhibit 1 attached hereto, that the No Project Alternative and the Reduced Herd Size Alternative, as described in the Final EIR, are either not environmentally preferable, are infeasible (e.g., they fail to fully meet the Project objectives), or are neither environmentally preferable nor feasible; and

WHEREAS, the Planning Commission is required by Public Resources Code Section 21081.6, subdivision (a), to adopt a mitigation and monitoring plan to ensure that the mitigation measures adopted by the County are actually carried out; and

WHEREAS, a Mitigation and Monitoring Plan has been prepared and is contained in Corrected Table ES-1 of the Final EIR which is attached as Exhibit 2 of this resolution; and

WHEREAS, because the adopted mitigation measures have not fully mitigated or avoided all identified significant environmental effects associated with the Project, CEQA requires the Planning Commission to adopt a Statement of Overriding Considerations, which is included as Section 7 of Exhibit 1 attached hereto; and

WHEREAS, the Planning Commission determines it appropriate to certify the Final EIR, to adopt the CEQA Findings of Fact and Statement of Overriding Considerations, to approve the Mitigation Monitoring Program, and to approve CUP 09-07.

NOW, THEREFORE, the Planning Commission of the County of Kings does hereby resolve, determine and order as follows:

I. SECTION 1: Recitals

1. The above recitals are true and correct, and the Planning Commission hereby so finds.

II. SECTION 2: Findings Related to Prior Proceedings

1. The Notice of Preparation for the Draft EIR was duly prepared, noticed and properly circulated in accordance with the provisions of CEQA.
2. The Draft EIR was duly prepared, properly circulated and completed in accordance with CEQA.

3. After providing adequate public notice, the Draft EIR was duly circulated in accordance with the provisions of CEQA, and a public hearing was properly noticed and was conducted by the Planning Commission in compliance with CEQA.
4. All comments received during and after the period of public review have been duly considered and incorporated into the Final EIR, and when necessary, replied to in accordance with the provisions of CEQA.
5. The Planning Commission provided written responses to all public agency comments received on the Draft EIR at least ten days before certification of the Final EIR pursuant to the provisions of CEQA.
6. The Final EIR for the Project has been properly completed and has identified all significant environmental effects of the Project, and there are no known potential environmental effects that are not addressed in the Final EIR.
7. The Project has been modified with mitigation measures to eliminate significant impacts or to reduce such impacts to a level of insignificance in almost all instances.
8. The Commissioners, in their capacity as the decision-making body of the Lead Agency for this project, were mailed copies of the proposed Draft EIR on May 4, 2012, and were mailed copies of the proposed Final EIR on October 26, 2012. The Commission heard a summary of the Final EIR as part of the staff report given at the public hearing on November 5, 2012, and the Commission has reviewed and considered the information contained in the Draft EIR and Final EIR prior to taking action on CUP 09-07.
9. The Planning Commission has used its own independent judgment in adopting this Resolution, in approving the Project, and in adopting and certifying the Final EIR, adopting the CEQA Findings of Fact and Statement of Overriding Considerations and the Mitigation and Monitoring Plan.

III. SECTION 3: Certification of the Final EIR, Adoption of the CEQA Findings of Fact and Statement of Overriding Considerations, and Adoption of the Mitigation and Monitoring Plan

1. It is hereby certified that the Final EIR has been completed in compliance with CEQA;
2. It is hereby certified that the Final EIR has been presented to the Planning Commission, which has reviewed and considered the information and analysis contained therein;
3. It is hereby certified that the Final EIR reflects the independent judgment of the Planning Commission of the County of Kings;

4. By adopting this Resolution, including the CEQA Findings of Fact and Statement of Overriding Considerations attached hereto as Exhibit 1, the Planning Commission has satisfied its obligations pursuant to Public Resources section 21081 and CEQA Guidelines section 15091, in that Exhibit A (i) identifies all feasible mitigation measures that can substantially lessen or avoid the significant environmental effects associated with the Project, (ii) explains why no feasible mitigation measures are available to substantially lessen or avoid some significant environmental effects associated with the Project, and (iii) explains why the No Project Alternative and the Reduced Herd Size Alternative cannot feasibly and adequately satisfy the objectives of the Project;
5. Through this Resolution, including a Mitigation and Monitoring Plan contained in Corrected Table ES-1 of the Final EIR which is attached as Exhibit 2 of this resolution, the Planning Commission has satisfied its obligations pursuant to Public Resources Code section 21081.6, subdivision (a);
6. By adopting this Resolution, including Section 7 of Exhibit 1 attached hereto, the Planning Commission has satisfied its obligation pursuant to Public Resources Code section 21081, subdivision (b), which requires the issuance of a Statement of Overriding Considerations whenever a project's significant environmental effects cannot be substantially lessened or avoided by the adoption of all feasible mitigation measures;
7. The Planning Commission authorizes County staff to prepare and file a Notice of Determination within five working days following the date of adoption of this Resolution with the County Clerk-Recorder's Office of the County of Kings and with the State of California and directs that copies of the Final EIR be retained at the office of the Kings County Community Development Agency.

IV. SECTION 4: Consistency with the 2035 Kings County General Plan and the Dairy Element

Finding No. 1: The use of the Project site for the Sozinho Dairy Expansion Project will be in accordance with all the objectives and policies of the *2035 Kings County General Plan* and the *Dairy Element*.

Evidence:

1. The proposal to merge, remodel and expand two existing dairy facilities is consistent with the policies of the Kings County General Plan. The applicable general plan policies are found in the *2035 Kings County General Plan*. Figure LU-16, Land Use Map of Hanford "Urban Fringe" (see page 6 of the staff report for CUP 09-07), designates the project site as General Agriculture (AG-20).
 - A. The proposal to merge, remodel and expand two existing dairy facilities is a commercial agricultural use that is appropriate within the AG-20 designation.
2. Page LU-13, Section III.A.1. of the "Land Use Element" states that agricultural land use designations account for a vast majority of the County's land use. Included within this land use type are four agricultural type land use designations, Limited Agriculture, General Agriculture 20 Acre Minimum, General Agriculture 40 Acre Minimum, and Exclusive Agriculture. The

major differences between the four Agriculture designations relate to minimum parcel size, animal keeping, and agricultural service businesses. These designations preserve land best suited for agriculture, protect land from premature conversion, prevent encroachment of incompatible uses, and establish intensity of agricultural uses in a manner that remains compatible with other uses within the County. The development of agricultural service and produce processing facilities within the Agricultural areas of the County shall develop to County standards.

- A. The proposal to merge, remodel and expand two existing dairy facilities is a commercial agricultural use that is appropriate within the AG-20 designation.
3. Page LU-13, Section III.A.1 of the “Land Use Element” of the *2035 Kings County General Plan* states that the AG-20 designation is applied to rural areas of the county north of Kansas Avenue, excluding the Urban Fringe areas of Hanford and Lemoore, Communities of Armona and Home Garden, the Naval Air Station Lemoore, the Santa Rosa Rancheria Tribal Trust Land, and other small Rural Interface pockets of urban uses. Generally characterized by extensive and intensive agricultural uses, farms within this designation have historically been smaller in size. These areas should remain reserved for commercial agricultural uses because of their high quality soil, natural and manmade waterways, scenic nature with larger concentrations of orchards, vineyards, and valley oak trees.
 - A. The proposal to merge, remodel and expand two existing dairy facilities is a commercial agricultural use that is appropriate within the AG-20 designation.
 4. Page LU-27, Section IV.B of the “Land Use Element” of the *2035 Kings County General Plan* states that the physical development of agricultural properties is regulated and implemented by the zoning ordinance.
 - A. The proposed project is consistent with the Kings County Zoning Ordinance (see Section 5 on pages 76 through 81 of this Resolution for Zoning Consistency findings).
 5. Page LU-37, LU Objective B5.2 restricts the locations where dairies may be located to those areas of the County where they are most compatible with surrounding uses, activities and environmental constraints as presented in the Dairy element.
 - A. The dairy facility is located in the General Agriculture (AG-20) land use designation, which is a compatible area for dairies.
 6. Page LU-37, LU Policy B.5.2.1 of the “Land Use Element” of the *2035 Kings County General Plan* states that proposed new dairies and dairy stock replacement facilities, and expansions of existing dairies may be approved through the Site Plan Review process if they meet all of the criteria in the *Dairy Element* concerning siting, design, operation, monitoring and reporting.
 - A. The proposed project deviates from the standards in the Dairy Element; therefore, a Conditional Use Permit is required rather than a Site Plan Review pursuant to *Dairy Element* Policy DE 2.1g.

7. As required by the *Dairy Element* of the *2035 Kings County General Plan*, the owner/operator prepared and submitted the Sozinho Dairy Technical Report to the Kings County Community Development Agency on August 31, 2009 (see Appendix H of the Draft EIR) for the proposal to merge, remodel and expand two existing dairy facilities. The Kings County Community Development Agency has determined the Sozinho Dairy Technical Report and Dairy Site Plan deviates from the *Dairy Element's* policies and standards and that additional environmental review is required.
 - A. Since the proposed project deviates from the policies of the *Dairy Element* a Conditional Use Permit has been submitted by the applicant and an Environmental Impact Report has been prepared to analyze the areas that the project deviates from the policies of the *Dairy Element*. A copy of Dairy Element Findings for CUP 09-07, Sozinho Dairy is located in Appendix G of the Draft EIR.
8. Section III.B, on Page DE-18 of the Dairy Element, states that when the expansion of an existing dairy does not or cannot meet all regulations, policies, mitigation requirements, standards, etc. in the Dairy Element, the application will be processed as an application for a conditional use permit (CUP). The review of such a CUP will include CEQA review beyond the Program EIR, which may include tiering of environmental documents as appropriate.
 - A. Since the proposed project deviates from the policies of the *Dairy Element* a Conditional Use Permit has been submitted by the applicant and an Environmental Impact Report has been prepared to analyze the areas that the project deviates from the policies of the *Dairy Element*. A copy of Dairy Element Findings for CUP 09-07, Sozinho Dairy is located in Appendix G of the Draft EIR.
9. Objective DE 2.1, on Page DE-18 of the Dairy Element, states that any additional environmental review associated with the CUP process shall only be required to address the deviation from the Dairy Element site plan review process requirements.
 - A. Since the proposed project deviates from the policies of the *Dairy Element* a Conditional Use Permit has been submitted by the applicant and an Environmental Impact Report has been prepared to analyze the areas that the project deviates from the policies of the *Dairy Element*. A copy of Dairy Element Findings for CUP 09-07, Sozinho Dairy is located in Appendix G of the Draft EIR.
10. Policy DE 2.1g, on Page DE-20 of the Dairy Element, states that an application that does not, or cannot, meet all regulations, policies, mitigation requirements, standards, etc. of the Dairy Element shall be submitted as an application for a conditional use permit (CUP) which will include additional environmental review. The Planning Commission may consider alternatives to the Dairy Element's regulations, policies, mitigation requirements, standards, etc., but must ensure that any alternative accomplish the same or higher level of performance as required by the Dairy Element, thus ensuring that the project is consistent with the Dairy Element of the General Plan.

- A. Since the proposed project deviates from the policies of the *Dairy Element* a Conditional Use Permit has been submitted by the applicant and an Environmental Impact Report has been prepared to analyze the areas that the project deviates from the policies of the *Dairy Element*. A copy of Dairy Element Findings for CUP 09-07, Sozinho Dairy is located in Appendix G of the Draft EIR.
 - B. The Sozinho Dairy Expansion Project deviates from the standard contained in Dairy Element Policy DE 3.1c. The project proponent has submitted a CUP and has proposed to install and maintain a downwind windbreak/shelterbelt along the east and south boundary of the project site as an alternative to the requirement that the new improvements be located so that the existing separation shall not be reduced.
 - C. The windbreak will accomplish a higher level performance than is required by Dairy Element Policy DE 3.1c. A dust and odor windbreak is not a requirement of the Dairy Element, and is not a mitigation measures incorporated into either the Odor Management Plan or the Fugitive Dust Emissions Control documents within the Sozinho Dairy Technical Report. Installation of trees and shrubs will provide an additional layer of dust and odor control. Dairy Element mitigation measures are primarily focused on reducing or where feasible eliminating dust and odors within the dairy facility. As not all dairy facility dust is contained on site, a windbreak will encourage deposition of dust particles that transport odors and intercept and filter odors and dust particles already airborne.
11. Based on Objective DE 2.1 and Policy DE 2.1g of the Dairy Element, the EIR is only required to analyze the areas that the project deviates from the standards of the Dairy Element. No additional environmental review is required for areas that the project complies with the standards of the Dairy Element.
- A. The Dairy Element Findings for CUP 09-07 (see Appendix G of the Draft EIR) documents the areas that the project is consistent with the standards of the Dairy Element. The Dairy Element Findings for CUP 09-07 also documents the areas that the project deviates from the standards of the Dairy Element. An Environmental Impact Report has been prepared to analyze the areas that the project deviates from the policies of the *Dairy Element*.

V. SECTION 5: Consistency with the Kings County Zoning Ordinance

Finding No. 2: The proposal complies with the applicable provisions of the *Kings County Zoning Ordinance*.

Evidence: Article 4, Section 402.D.8. of the General Agricultural (AG-20) District lists “expansions of existing bovine dairies which do not qualify under the *Dairy Element* of the *Kings County General Plan* for the issuance of a site plan review without additional mitigation of potential impacts” as a conditional use subject to Kings County Planning Commission approval.

As provided in Section 1902 of the *Kings County Zoning Ordinance*, the Planning Commission is the administrative agency authorized to grant use permits for conditional uses. When considering an application for a conditional use permit, the Commission shall impose conditions upon the granting of the use permit necessary for the protection of the public health, safety, and general welfare, and necessary to achieve the objectives of the *Kings County Zoning Ordinance*.

Sections 1905 and 1906 of the *Kings County Zoning Ordinance* require that before the Commission may act on an application for a conditional use permit it must hear the County Planning Director's report and hold a duly noticed public hearing.

Finding No. 3: The Community Development Agency Director's report was given to the Commission prior to the beginning of the public hearing on November 5, 2012.

Evidence: The Community Development Agency Director's reports were given to the Commission at its November 5, 2012, meeting.

Finding No. 4: The Commission duly noticed the public hearing for this application (CUP 09-07) by the prescribed methods in the *Kings County Zoning Ordinance* and state law.

Evidence: The Community Development Agency Director has certified that notice was given by the following methods:

1. Mailed notice to all property owners within 300 feet of the proposed project property boundary on October 26, 2012, as required by Chapter 2.7 of Division 1 of Title 7 of the California Government Code, beginning at Section 65090. For CUP 09-07, notice was also given in the following manner: If the property immediately adjacent to the to the subject property is more than 300 feet in width, then notice shall be given to the next adjacent parcel as well. However, if the immediately adjacent property is less than 300 feet in width, no additional notice is required beyond the 300 feet. Parcels separated by a street or road shall be considered adjacent for determining which parcels are given notice. In addition to the above requirements, if a parcel is within the area that receives notice, both the property owner, and the situs address if it is different from the owner's address as shown on the latest equalized assessment roll, shall be given notice.
2. Mailed notice to all responsible and trustee agencies on October 26, 2012.
3. Mailed notice to all those persons who specifically requested notice in writing on October 26, 2012.
4. Published notice one time in the Hanford Sentinel, a newspaper of general circulation in Kings County as designated by the Kings County Board of Supervisors, on October 26, 2012.

Copies of these notices and affidavits of mailing, posting and publishing are on file in the office of the Kings County Community Development Agency.

Section 101 of the *Kings County Zoning Ordinance* states the purposes and objectives of the ordinance. These are:

The *Kings County Zoning Ordinance* is adopted to preserve, protect, and promote the public health, safety, peace, comfort, convenience, prosperity and general welfare. More specifically, the *Kings County Zoning Ordinance* is adopted in order to achieve the following objectives:

- a. To provide a plan for the physical development of the county in such a manner as to achieve progressively the general arrangement of land uses depicted in the General Plan.

- b. To foster a harmonious, convenient, workable relationship among land uses and a wholesome, serviceable and attractive living environment.
- c. To promote the stability of existing land uses which conform with objectives and policies of the General Plan and to protect them from inharmonious influences and harmful intrusions.
- d. To ensure that public and private lands ultimately are used for the purposes which are most appropriate and most beneficial from the standpoint of the general public.
- e. To promote the beneficial development of those areas which exhibit conflicting patterns of use.
- f. To prevent excessive population densities and overcrowding of the land with structures.
- g. To promote a safe, effective traffic circulation system.
- h. To foster the provision of adequate off-street parking and truck loading facilities.
- i. To facilitate the appropriate location of public facilities and institutions.
- j. To protect and promote appropriately located agricultural, commercial, and industrial pursuits in order to preserve and strengthen its economic base.
- k. To protect and enhance real property values.
- l. To conserve the county's natural assets and to capitalize on the opportunities offered by its terrain, soils, vegetation and waterways.
- m. To coordinate policies and regulations relating to the use of land with such policies and regulations of incorporated cities of the county in order to: facilitate transition from county to municipal jurisdiction that land which is first developed in an unincorporated area and is subsequently annexed to a city; foster the protection of farming operations in areas of planned urban expansion, and ensure unimpeded development of such new urban expansion that is logical, desirable and in accordance with objectives and policies of the General Plan.

Finding No. 5: The proposed project is consistent with the objectives of the *Kings County Zoning Ordinance*, as provided in Section 101.

Evidence: Based on Section 101 of the *Kings County Zoning Ordinance*, the text of which is listed in Section 3.2 of the staff report for CUP 09-07, the following objectives are met:

Objective a is to insure development is directed toward achieving progressively the general arrangement of land uses depicted in the general plan. The *2035 Kings County General Plan* identifies the Sozinho Dairy Expansion Project site as being located within the General Agriculture (AG-20) designation. New dairies and expansions of existing dairies are appropriate uses within the AG-20 and the AG-40 designations. The Limited Agricultural (AL-10) designation acts as a buffer between urban land uses and intensive agricultural land uses in the AG-20 and AG-40 designations.

Objective b is to insure that development does not detract from a wholesome, serviceable and attractive living environment. The remoteness of the proposed Sozinho Dairy Expansion Project from population concentration provides for a harmonious, workable relationship among land uses. The nearest residential subdivision is in the unincorporated community of Home Garden, which is about 1.0 mile west of the proposed Sozinho Dairy Expansion Project. The proposed Sozinho Dairy Expansion Project is not upwind of any residential subdivisions.

Objective c provides for protection from intrusive or conflicting land use. This works two ways in this case. The remoteness of the location in an AG-20 zone district separates the proposed Sozinho Dairy Expansion Project from areas of residential and commercial uses. The AL-10 zone district also acts as a buffer between the AG-20 zone district and urban uses so that incompatible uses will not encroach on this proposed use in the future thus eliminating the potential for future land use conflicts.

Objective d is to insure land uses are appropriate and beneficial to the general public. The general plan policies for dairy facilities direct the location of such facilities away from population concentrations. Using the AG-20 zone district for the proposed Sozinho Dairy Expansion Project accomplishes this by appropriately separating people in residential and commercial areas from the proposed Sozinho Dairy Expansion Project. The closest residential subdivision is in the unincorporated community of Home Garden, which is about 1.0 mile west of the proposed Sozinho Dairy Expansion Project.

Objective e refers to development of transitional areas, i.e., urban-rural interface, commercial-residential transition zones, etc. This proposal is not in any transitional area and is not affected by any of these issues.

Objective f refers to development density of residential uses. This proposal is not associated with any residential use and does not affect the development density of any residential uses.

Objective g refers to safe, effective traffic circulation, which is attained through the project's consistency with its location near a major transportation route, i.e., SR 43. This roadway is designed for truck traffic and does not go through residential neighborhoods. Kings County is located in the southern half of the San Joaquin Valley and covers approximately 1,400 square miles. The major routes crossing Kings County are Interstate (I-) 5 and State Route (SR-) 198. These major routes connect SR-41 and SR-43 and a network of other state highways and County roads. There are approximately 1,400 miles of surface roads of all classifications in Kings County maintained variously by the state, County, and incorporated cities. Approximately 160 miles are state and interstate highways, and approximately 970 miles are County roadways. The remaining miles are city streets. Appendix H of the Draft EIR contains the Technical Report for the Sozinho Dairy Project. A Traffic Impact Study (pages 102 to 103 of the Technical Report) states that the project is not expected to degrade the present Level of Service (LOS) on the nearby County roads of regional significance below acceptable levels.

Objective h provides for adequate off street parking and truck loading (and unloading) facilities. All of the proposed Sozinho Dairy Expansion Project will be entirely on Sozinho property. No parking, loading or unloading will occur on any public street.

Objective i is to facilitate the location of appropriate public facilities. This objective is not applicable since the project does not affect the location of public facilities.

Objective j is intended to protect and promote appropriately located activities on the land, and to preserve and strengthen the county's economic base. The remoteness of the Sozinho Dairy Expansion Project eliminates any adverse effects the project might cause on activities where people work and live (See Objectives a, b, c, and d above).

Objective k is to protect real property values. The remoteness of the proposed site from residential and commercial provides this protection (See Objectives a, b, c, d, and j above).

Objective l is intended to conserve the county's natural assets. The proposed project does not affect any of the County's natural assets. The Project site is located in the AG-20 zone district and proposes to expand an existing bovine dairy facility. A dairy facility is a commercial agricultural operation that is appropriate within the AG-20 zone district.

Objective m refers to coordinating transition from county to municipal jurisdiction. This objective is not applicable since the Sozinho Dairy Expansion Project does not affect any urban fringe area in the county.

According to Section 1908.C. of the Kings County Zoning Ordinance, the proposed conditional use must comply with each of the applicable provisions of the ordinance.

Finding No. 6: The proposed project conforms to Section 405 (f) and 406 of the *Kings County Zoning Ordinance*. The provisions include:

- Screening of open storage of material or equipment
- Objectionable process, equipment or materials
- Site area
- Site area per dwelling unit (not applicable)
- Coverage
- Fences, walls and hedges
- Yard requirements
- Height of structures
- Distance between structures
- Off street parking and loading facilities
- Signs

Evidence:

Screening: The Sozinho Dairy Expansion Project is one-quarter mile west of State Route 43 and one mile east of the unincorporated community of Home Garden (which is the nearest single family residential subdivision). Section 1605.B of the Kings County Zoning Ordinance contains the provisions pertaining to fencing, walls, gates, hedges and screening and landscaping. Section 1605.B.1.f. requires screening when a site that is the subject of a site plan review or a conditional use permit abuts on or across a street or alley from a rural residential, residential, multi-family residential, or transitional zone district. The Sozinho Dairy Expansion Project does not require screening because the project site does not abut and is not on or across a street or alley from a rural residential, residential, multi-family residential, or transitional zone district.

Objectionable process, equipment or materials: Although a dairy facility can create objectionable odors, the rules, regulations, standards and laws that apply both to the construction, maintenance, and operation of a dairy facility will mitigate odors to the extent feasible. The EIR identifies a potentially significant impact to Air Quality (Odor Emissions) in that Project will result in the emission of odors formed from dairy operations, including corrals, lagoons, and freestalls. Detailed information and analysis regarding this significant potential impact is provided in the

Draft EIR, Section 3.1 (Impact # 3.1.9). The potential significant impact to Air Quality (Odor Emissions) will be mitigated, but not to a level less than significant, by the Project Applicant's implementing all feasible control measures incorporated in the SJVAPCD's Rule 4550 and Rule 4570 (see Appendix D of the Draft EIR), in Dairy Element Policies DE 4.1a, DE 4.1b, DE 4.1d and DE 5.1b (see Appendix F of the Draft EIR), and by the preparation and filing of an Odor Management Plan (OMP) with the Community Development Agency as required by the Kings County Dairy Element. A copy of the OMP is in the Sozinho Dairy Technical Report (pages 45-51) located in Appendix H in the Draft EIR. Implementation of these mitigation measures will reduce but not eliminate the significant impact on Air Quality (Odor Emissions), and the impact will remain significant.

Site Area: Minimum site area in the AG-20 zone district is 20 acres. The Sozinho property is 428 acres in size, which far exceeds this minimum site area requirement. The dairy facility occupies approximately 60 acres and field crops occupy 368 acres.

Site Area Per Dwelling Unit: No dwelling units are proposed; therefore, the provision is not applicable.

Coverage: The AG-20 zone district has no limitation for site coverage and none will be required.

Fences, Walls, and Hedges: Section 1605.B.1 of the *Kings County Zoning Ordinance* contains provisions that specify the type of fences, walls, and hedges that are permitted in agricultural zone districts. The Sozinho Dairy Expansion Project does not propose fences, walls, and hedges that would conflict with Section 1605.B.1.

Yard Requirements: The proposed facilities will meet all minimum yard setback requirements.

Height of structures: The AG-20 zone district has no limitations on height of structures, and none will be required.

Distance Between Structures: The AG-20 zone district requires a minimum distance between structures of not less than ten (10) feet. The proposed project will be required to comply with this requirement.

Off Street Parking and Loading Facilities: Adequate parking is provided on site.

VI. SECTION 6: Public Health and Safety

Finding No. 7: The Sozinho Dairy Expansion Project site will not be detrimental to public health and safety, nor materially injurious to properties in the vicinity.

Evidence: The Sozinho Dairy Expansion Project should not be detrimental to public health and safety, nor materially injurious to properties in the vicinity. The Sozinho Dairy Expansion Initial Study determined that the project will not have significant effects on Aesthetics, Agriculture and Forest Resources, Biological Resources, Cultural Resources, Geology/Soils, Hazards and Hazardous Materials, Mineral Resources, Hydrology and Water Quality, Noise, Population and Housing, Public Services, and Recreation.

The Planning Commission can find that the mitigation measures in the Final EIR, and incorporated into the Project approval, are feasible and adequate to reduce each potential significant impact below a level of significance, except for: 1) Toxic Air Emissions Health Risk; 2) Operational Emission of Criteria Pollutants, Fine Particulate Matter (PM_{2.5}); 3) Operational Emission of Criteria Pollutants, Volatile Organic Compound (VOC); 4) Operational Emission of Criteria Pollutants, Nitrogen Oxide (NO_x); 5) Methane (CH₄) Generation; 6) Ammonia (NH₃); 7) Odor Emissions; 8) Ambient Air Quality; 9) Greenhouse Gases; 10) Residences Within ¼ Mile of Dairy Facility; 11) Air Quality Degregation; and 12) Climate Change/Greenhouse Gas Emissions, where the Final EIR found these impacts to be significant and unavoidable.

These project-specific and cumulative air quality impacts are considered to be significant and unavoidable even after implementation of feasible mitigation measures included in Sections 3.1, 3.2, and Chapter 5 of the Draft EIR and Corrected Table ES-1 attached to the Errata Sheet for the Final EIR. In accordance with Section 15093 of the CEQA Guidelines, a statement of overriding considerations will be required for these impacts if the Commission, after completing its deliberations, decides to approve the project. The rationale for why the Commission can accept the unavoidable impacts is explained in Section 4.2.2 of the staff report for CUP 09-07 and the Statement of Overriding Considerations as discussed in Section 4.2.4 of the staff report for CUP 09-07.

VII. SECTION 7: *California Land Conservation (“Williamson”) Act of 1965*

Finding No. 8: The Sozinho Dairy Expansion Project is consistent with the *California Land Conservation (“Williamson”) Act of 1965*.

Evidence:

1. The project site is located within an established agricultural preserve.
 - A. The *Uniform Rules for Agricultural Preserves in Kings County* state that during the term of the contract, the only uses permitted upon the land shall be Commercial Agricultural Uses and Compatible Uses.
 - (1) Section A.3.d of the *Uniform Rules for Agricultural Preserves in Kings County* lists operation of dairies as a Commercial Agricultural Use.
2. Section 51238.1 of the *California Government Code* requires that uses approved on contracted lands shall be consistent with all of the following principles of compatibility:
 - A. The use will not significantly compromise the long-term productive agricultural capability of the subject-contracted parcel or parcels or on other contracted lands in agricultural preserves.
 - (1) The proposed project will merge, remodel and expand two existing dairy facilities. Since the existing agricultural acreage is not being reduced as a result of this project, the long-term productive agricultural capability of the subject-contracted parcel will not be significantly compromised.

- B. The use will not significantly displace or impair current or reasonably foreseeable agricultural operations on the subject contracted parcel or parcels or on other contracted lands in agricultural preserves. Uses that significantly displace agricultural operations on the subject contracted parcel or parcels may be deemed compatible if they relate directly to the production of commercial agricultural products on the subject contracted parcel or parcels or neighboring lands, including activities such as harvesting, processing, or shipping.
 - (1) The proposed project will merge, remodel and expand two existing dairy facilities. Since the existing agricultural acreage will continue to be used for agricultural purposes, the proposed project will not significantly displace or impair current or reasonably foreseeable agricultural operations on the subject contracted parcel or parcels or on other contracted lands in agricultural preserves.

- C. The use will not result in the significant removal of adjacent contracted land from agricultural or open-space use.
 - (1) The proposed project will merge, remodel and expand two existing dairy facilities. Since the existing agricultural acreage will continue to be used for agricultural purposes, the proposed project will not result in the significant removal of adjacent contracted land from agricultural or open-space use.

VIII SECTION 8: Conditions of Approval

The Commission adopts the following conditions of approval for CUP 09-07:

KINGS COUNTY COMMUNITY DEVELOPMENT AGENCY - PLANNING DIVISION Contact Sandy Roper at the Kings County Community Development Agency - Planning Division at (559) 852-2685, regarding the following requirements:

- 1. All proposals of the applicant shall be requirements unless modified herein, including all designs and operational procedures identified in the Technical Report that are the owner and or operator's responsibility to do.

- 2. The site shall be developed according to the approved Site Plan and Technical Report submitted with a maximum herd limit of the dairy shall not exceed 4,768 animal units as proposed in the application, and assumes that 91 percent of the solid (dry) manure is transported off-site. This limit is based on the evaluation using the Kings County Dairy Model. However, a lower limit imposed by another agency with authority to set animal unit capacity may restrict the actual herd size, and this Conditional Use Permit does not alter such other agency's authority to restrict the dairy size. Regardless of any other agency's herd limit, no new herd limit zoning permit from Kings County will be required for any change in herd size below the 4,768 animal unit limit. No additional zoning permit will be required from the Kings County Community Development Agency unless the applicant proposes to exceed this maximum animal unit level or make additions to the physical dairy facility such as, but not limited to, adding barns, lagoons, feed and manure storage areas, corrals or change the manure management plan, etc.

At such time in the future the term “Animal Units (AU)” may be redefined, or waste production per AU is redefined, by the RWQCB, a re-evaluation of the herd limit approved in this Conditional Use Permit approval shall be done in coordination with any changes to the Report of Waste Discharge required by the RWQCB.

3. The site plan for the project is approved in concept. However, it is understood that during the actual design of the project that either of the following minor alterations to the site plan may be necessary: 1) structural alterations; and/or 2) alterations to the location of structures. Any minor alterations shall comply with the following requirements:
 - a. The site shall be developed in substantial compliance with the conceptually approved site plan. Development of the site shall be considered substantially consistent with the approved conceptual site plan if any minor structural alteration is within ten (10) percent of the square footage shown on the conceptually approved site plan or up to a 2,500 square foot increase in structural size, whichever is less, and the minor structural alteration complies with coverage standards.
 - b. A minor alteration of the location of a structure shall be considered substantially consistent with the approved conceptual site plan if the new location of the structure complies with all setback requirements for the zone district that the project site is located in.
 - c. Any minor alteration that would make it necessary to modify or change any specified zoning requirement placed on the project would require resubmittal of the application to amend the approval of the Conditional Use Permit.
 - d. No expansion of use, regardless of size, which would increase the projected scale of operations beyond the scope and nature described in this Conditional Use Permit application, will be allowed. Any expansion that is a substantial change from the conceptually approved site plan will require either an amendment to the approved Conditional Use Permit or a new zoning permit.
4. **A revised site plan shall be submitted to the Zoning Administrator in the event that any minor alterations (See Planning Division Requirement # 3) are made to the approved site plan to satisfy other regulatory agencies.** The revised site plan shall be submitted with the building permit application if a permit is required or prior to commencing construction if a building permit is not required (i.e., lagoons).
5. In addition to the site plans attached to each set of construction plans, two (2) separate copies of any revised site plan shall be submitted to the Community Development Agency for approval and inclusion into the zoning permit project file and the Kings County Tax Assessor’s records.
6. The project shall comply with all applicable policies of the *Dairy Element* of the *Kings County General Plan*.

7. The project shall comply with all regulations of the *Kings County Zoning Ordinance*, with particular reference to the General Agricultural (AG-20) Zone District standards contained in Article 4, and Article, 19.
8. The proposed use and structures shall be harmonious with existing structures and land in the vicinity.
9. The minimum yard setback requirements for any new structures shall be as follows:
 - a. The minimum front yard setback from the property line to the milk barn shall be fifty (50) feet and further provided that the distance from the center line of a street to the rear of the required front yard shall not be less than eighty (80) feet.
 - b. The minimum front yard setback from the property line to a non-dwelling, non-public type structure shall be thirty-five (35) feet except along those streets and highways where a greater setback is required by other ordinances and standards of the county including but not limited to the Kings County Improvement Standards, and further provided that the distance from the center line of the street to the rear of the required front yard shall be not less than sixty-five (65) feet.
 - c. The minimum side yard setback shall be ten (10) feet from the side property line.
 - d. The minimum rear yard setback shall be ten (10) feet from the rear property line.
 - e. The minimum distance between a residence and a structure housing livestock or poultry shall be forty (40) feet.
 - f. All buildings and structures on dairy or feedlot facilities shall be set back from all public road right-of-ways at least thirty-five (35) feet, Corrals, feed and manure storage areas, and open sided shade structures shall be set back at least twenty (20) feet from public road right-of-ways.
10. Signs shall be permitted only as follows:
 - a. Any sign(s) pertaining to the use and location on the site shall not exceed the total copy area of forty (40) square feet. The location of any such sign shall be submitted to the Zoning Administrator for approval prior to installation.
 - b. Signs exceeding forty (40) square feet in structural area and up to one-hundred-fifty (150) square feet in structural area which are incidental and pertain to a permitted or conditional use may be permitted subject to a site plan review. Such signs may be located on the same parcel or an adjacent parcel used in conjunction with the permitted or conditional use. Signs exceeding forty (40) square feet in structural area may be illuminated and shall be thirty (30) feet from property lines adjacent to a road.
 - c. One non-illuminated on-site sign real estate sign or subdivision not exceeding thirty-two (32) square feet in structural area with copy on both sides pertaining to the sale, lease, rental or display of a structure or land per Section 1606.B.2.a.
 - d. Directional or information (other than advertising) signs not exceeding two hundred and forty (240) square feet in area located adjacent to a State Highway or a county road within an area limited by points not closer than one-fourth ($\frac{1}{4}$) mile or further than three-fourths ($\frac{3}{4}$) mile from a frontage road turnoff, listing commercial establishments accessible via the frontage road, and further provided that not more than four (4) such signs shall be permitted on each side of the highway or county road.

- e. Signs not exceeding two hundred forty (240) square feet in area located adjacent to a State Highway or county road that is classified as an arterial or collector road (including such designations as urban or rural, major or minor) giving direction to or information about Kings County cities, communities, or rural service centers which are accessible by such state highways or county roads or direct routes consisting of combinations thereof, provided that such signs shall be limited to four (4) per city, community or rural service center regardless of the sign's location in this district, and further provided that such signs shall not contain information pertaining to a subdivision of land or private development, commercial establishments or quasi-public developments.
 - f. Non-illuminated temporary construction signs in accordance with Section 1606.B.2.c.
 - g. Political and campaign signs in accordance with Section 1606.B.3.
 - h. Placing a sign on property which is restricted by contract under the *California Land Conservation "Williamson" Act* shall be prohibited, except for temporary signs (pursuant to Section 1606.B.2.a, c, and d), political and campaign signs (pursuant to Section 1606.B.4), and must be consistent with the *Uniform Rules for Agricultural Preserves in Kings County*.
11. Off-street parking spaces shall be provided as shown on the approved site plan in accordance with Article 15, Section 1502.A.2.(e) of the *Kings County Zoning Ordinance* and shall be maintained in accordance with *Kings County Improvement Standards* and approved site plan. The required off-street parking spaces for automobiles shall be provided at the time of initial occupancy of the site or of construction of a building.
12. All parking areas, aisles, and driveways shall be surfaced and maintained so as to provide a durable, dustless surface as follows:
- a. Any driveway used by milk trucks/tankers, where the wheels of the trucks create a turning movement, shall be surfaced in accordance with Section 303.G. and Drawing 3036 of the *Kings County Improvement Standards* which requires two (2) inches of Type "B" Asphalt Concrete over six (6) inches of R-70 Native @ 95% compaction under the "Heavy Use (Alternative Design)".
 - b. All parking areas, aisles and access drives shall be surfaced and maintained so as to provide a durable, dustless surface. Section 303.G. and Drawing 3036 of the *Kings County Improvement Standards* requires four (4) inches of decomposed granite **with a penetration seal of SC-250** at 0.50 gal./sq. yd. under "Light Use Conditions." An alternate material which provides a durable dust free surface may be used only with prior approval of the Director of Public Works. (Note: The Kings County Zoning Administrator hereby reserves the authority to require additional improvements to the parking area and driveways if at any time in the future the decomposed granite surface deteriorates and either a dust problem is created due to vehicles driving on the decomposed granite surface, or a mud problem is created due to vehicles tracking mud onto County roads or State highways).
13. For safety reasons, gates which are used for vehicular ingress and egress shall be setback so that the greater of the following distances are met from the property line being used for access:
- a. A minimum distance of twenty (20) feet or,

- b. A distance sufficient to ensure that vehicles used for a permitted use requiring a site plan review or conditional use permit are able to pull completely onto their property.
 - c. Gates used for the primary vehicular ingress and egress and which are opened and closed electronically with a remote control may be located within any portion of the property being used for access to a driveway provided that:
 - (1) The property owner/occupant obtains a building permit from the building division for the installation of the electric gate operating mechanism and wiring. The property owner/occupant must also request and obtain a final inspection for the assigned building permit and demonstrate operation of the mechanism using the remote.
 - (2) The gate must be operational at all times using a remote control device that allows the property owner/occupant to open and close the gate to enter the driveway area without exiting the vehicle.
 - (3) At any time that the gate is not operational using the remote control device the gate must either be locked in the open position or it must be removed entirely.
14. No solid fence, wall, hedge or shrub exceeding three (3) feet in height shall be erected, planted or maintained within a required Traffic Safety Visibility Area. Traffic Safety Visibility Area is defined as a space set aside on a lot in which all visual obstructions, such as structures, fences and plantings that inhibit visibility and thus have the potential to cause a hazard to traffic and pedestrian safety are prohibited.
- a. **Area adjacent to a driveway on any lot** - the Traffic Safety Visibility Area is that area on the street side of a diagonal line connecting points, measured from the intersection of the driveway (located on the property or adjoining parcel) and the street right of way line, twenty (20) feet along the side of the driveway and twenty (20) feet along the street side of a lot.
 - b. **On a corner lot** - the Traffic Safety Visibility Area also includes that area of a corner lot on the street side of a diagonal line connecting points, measured from the property corner where the streets intersect, set back one (1) foot for every one (1) mile per hour of the posted speed limit along each street.
15. All open and non-landscaped portions of the site shall be maintained in good condition, free from weeds, dust, trash and debris.
16. Any exterior lighting shall be hooded so as to be directed only on-site.
17. **Prior to construction of any new shades or other facilities**, in order to adequately assess any potential Project-related impacts to biological resources, an assessment shall be made by a qualified wildlife biologist to determine if there are any suitable nesting trees within ¼ mile of the construction site and to check for nesting raptors if any suitable trees occur. **A nesting survey for nesting raptors shall be performed if ground disturbing activities on the site are to occur between March 1 and July 31.** No surveys are required if construction is conducted outside of the season.

18. **The applicant shall comply with all provisions of California Historical Resources Information System letter dated November 5, 2009. On any land that is vacant and has never been developed, including placement of underground utilities, a professional archaeologist shall conduct a field survey of the area prior to ground disturbance activities. If any potential historical, archeological or paleontological resources are encountered during construction, work in the vicinity of the find shall be suspended or diverted. The applicant shall retain a qualified archeologist to perform an assessment of the resource.** Depending on the nature of any such find, evaluation may include determination of site boundaries and assessment of site integrity and significance. Standards for the site evaluation shall comply with appropriate State and Federal requirements (including California Public Resources Code Section 21083.2i)). Evaluation shall include, if necessary, site mapping and/or limited subsurface testing using standard archeological methods in accordance with CEQA Guidelines Section 15064.5. If, after evaluation, the qualified archeologist judges an historical, archeological or paleontological resource to be of importance, a mitigation plan shall be prepared in accordance with appropriate guidelines and submitted to the Zoning Administrator. Mitigation could include avoidance, site capping, data recovery, or a combination of these or other measures, as determined by the qualified archeologist or paleontologist. Consultation with representatives of recognized local Native American groups shall be reflected in the development of any mitigation plan affecting Native American cultural resources.
19. The applicant shall develop and maintain an “Emergency Back-up Plan” for the disposal of dead animals to be used in the event a county-wide emergency is declared. The Emergency Back-up Plan should provide details on how and where the dairy operator will dispose of animal carcasses in the event that disposal through rendering is not available. A copy of the Kings County *Emergency Action Plan for Dead Animal Management* is included in Appendix H of the Draft EIR.
20. In the event that dead animals must be transported off-site, carcasses shall be hauled in trucks that prevent leakage of carcass fluids on the roadway and shall be screened from public view during transport.
21. As required by *Kings County Dairy Element* Policy DE 4.2a, the dairy owner/operator shall have a written wastewater agreement with each third party that receives process wastewater from the dairy facility. The agreement shall include a legal description of the property that will be used for process wastewater application and shall include all provisions listed in Policy DE 4.2a as applicable. The wastewater agreement shall be recorded with the Recorder’s Officer by the facility owner/operator and the owner of the land identified in the Comprehensive Dairy Process Water Application Plan after this zoning permit is approved but before the final inspection of the shade structure. A copy of each such new agreement shall be provided to the Kings County Zoning Administrator.
22. As provided in Kings County Dairy Element Policy 6.2f, copies of ALL reports that are required by, and submitted to, the RWQCB shall also be provided to the Kings County Zoning Administrator.

23. Prior to selling any land on which process water is applied, the facility owner/operator shall notify the Zoning Administrator and:
 - a. Provide substitute land or enter into an agreement with another land owner to replace the land upon which the process water is applied, or
 - b. Immediately reduce the dairy herd to a level that can be accommodated by the remaining land identified in this Conditional Use Permit
 - c. Changes made in the operation as noted in this paragraph must be reflected in an amendment to this Conditional Use Permit.

24. Prior to terminating any wastewater agreement, the facility owner/operator shall notify the Zoning Administrator and:
 - a. Provide a substitute agreement with another land owner to replace the land within the terminated agreement, or
 - b. Immediately reduce the dairy herd to a level that can be accommodated by the remaining land identified in this Conditional Use Permit
 - c. Changes made in the operation as noted in this paragraph must be reflected in an amendment to this Conditional Use Permit.

25. The owner/operator shall document and maintain a record of the amount of solid manure produced at the facility and the amount transported off-site. Documentation shall be accomplished using the “Manure/Process Wastewater Tracking Manifest” required by California Regional Water Quality Control Board General Order No. R5-2007-0035 and shall be made available to the Kings County Code Compliance Specialist upon request.

26. Pursuant to Article 24, Section 24-02 of the *Kings County Zoning Ordinance*, the Kings County Zoning Administrator shall have the right to enter on any site or to enter any structure for the purpose of investigation and inspection provided the right of entry shall be exercised only at reasonable hours. The zoning administrator may serve notice requiring the removal of any structure or use in violation of the *Kings County Zoning Ordinance* on the owner or his authorized agent, on a tenant, or on an architect, builder, contractor or other person who commits or participates in any violation.

27. Pursuant to Section 1908 of the Zoning Ordinance, the Planning Commission's decision on the application shall become effective eight (8) days following its decision, unless the Board of Supervisors initiates proceedings to review the decision of the planning commission or an appeal to the Board of Supervisors is filed pursuant to Section 1911 of the Zoning Ordinance. **The Conditional Use Permit shall lapse and shall become null and void one (1) year following the date that the Conditional Use Permit became effective, unless prior to the expiration of one (1) year a building permit is issued by the Building Official and construction is commenced and diligently pursued toward completion on the site that was subject of the Conditional Use Permit application.**

28. This approved Conditional Use Permit shall run with the land and shall continue to be valid upon change of ownership of the site which was the subject of the site plan approval.

29. A Conditional Use Permit may be extended for additional periods of time, if an application (by letter) and fees for extension of the Conditional Use Permit are filed with the Kings County Community Development Agency prior to the expiration date of the Conditional Use Permit.
30. The operator shall comply with all adopted rules and regulations of the Kings County Public Works Department, Fire Department, and Department of Environmental Health Services, and all other local, District, Regional, State and Federal regulatory agencies.
31. All mitigation measures in the Mitigation Monitoring Plan, found in the Corrected Table ES-1 of the Final EIR attached to the Errata Sheet, that pertain to CUP No. 09-07 are adopted as conditions of this approval and are included in the Conditional Use Permit.
32. The applicant shall indemnify, defend and hold the Kings County Planning Commission and Kings County, and their officers, agents and employees, harmless from and against any and all claims, damages and liabilities, including, but not limited to the cost of defending against any and all litigation including administrative proceedings and payment of attorney's fees that may arise from the permit process, any challenges to the conditional use permit, denial of the permit, the supporting environmental documentation, or which arise out of operation of the Sozinho Dairy Expansion Project. The duty shall arise irrespective of whether the applicant, proponent or an opponent initiates such action.
33. The Sozinho Dairy Expansion Project shall be operated in a manner so as not to create a public nuisance or health hazard.
34. All existing and/or proposed landscaping shall be allowed to grow to maturity and shall be continually maintained after planting. Such maintenance is to include pruning, weeding, cleaning, fertilizing, and regular watering. Dead and dying plants shall be replaced with live plant materials to ensure compliance with landscaping requirements.
35. Pursuant to Section 14-38(d) of the *Kings County Code of Ordinances*, a “Notice of Disclosure and Acknowledgment of Agricultural Land Use Protection and Right to Farm Policies of the County of Kings” shall be signed, notarized, and recorded. A copy of the recorded document shall provide to the Kings County Community Development Agency. **Please enter the legal description of your property on the form (or attach a separate sheet if necessary) and take it to the Kings County Recorder’s Office for recording after you have had your signature notarized. A copy of the recorded document shall be returned to the Community Development Agency after recording.**
36. Pursuant to Section 66020(d)(1) of the *California Government Code*, the owner is hereby notified that the 90-day approval period in which the applicant may protest the imposition of fees, dedications, reservations, or other exactions, begins on the date that this resolution is adopted.
37. Sales or use tax may apply to business activities on the site. The applicant may seek written advice regarding the application of tax to your particular business by writing to the nearest State Board of Equalization office. For general information, please call the Board of Equalization at 1-800-400-7115.

38. No process, equipment or materials shall be used which are found by the Zoning Administrator to be substantially injurious to persons, property, crops, or livestock in the vicinity by reasons of odor, fumes, dust, smoke, cinders, dirt, refuse, water carried wastes, noise, vibration, illumination, glare or unsightliness or to involve any undue risk of fire or explosion. The Zoning Administrator may revise this approval to resolve any of the above issues, should they occur, by placing additional requirements on the use including restricting or prohibiting any offending activity or activities.
39. The applicant shall comply with all adopted rules and regulations of the Kings County Community Development Agency, Kings County Public Works Department, Kings County Fire Department, and Kings County Health Department Division of Environmental Health Services, and all other local, District, State and Federal regulatory agencies.
40. Within eight (8) days following the date of the decision of the Kings County Planning Commission, the decision may be appealed to the Kings County Board of Supervisors. Any such appeal shall be filed with the Clerk of the Board of Supervisors. An appeal fee of \$320.00 shall be submitted at such time that an appeal is filed.

IX. SECTION 8: Other Standards and Regulations

The following departments and agencies have listed requirements, standards, and regulations that must be met under those department's and agency's jurisdiction. The Planning Commission has no authority to modify, amend, or delete any of these requirements, standards, and regulations, but lists them here as information to the applicant. Appeals for relief of these standards and regulations must be made through that department's or agency's procedures, not through the Zoning Ordinance procedures. However, failure of the applicant to comply with these other departments' and agencies' requirements, standards, and regulations is a violation of this conditional use permit (see Condition No. 30 above) and could result in revocation of this conditional use permit.

KINGS COUNTY COMMUNITY DEVELOPMENT AGENCY - BUILDING DIVISION Contact Darren Verdegaal at the Kings County Community Development Agency - Building Division at (559) 852-2683, regarding the following requirements:

1. Building permits must be obtained from the Building Division of the Kings County Community Development Agency for any structures, plumbing, electrical, or mechanical work.
2. Failure to obtain a building permit for any structure, prior to commencing construction, which requires a building permit, will result in the payment of a double fee. Payment of such double fee shall not relieve any person from fully complying with the requirements of Kings County Code of Ordinances, Chapter 5 in the execution of the work or from any other penalties prescribed therein.
3. Pursuant to Kings County Code of Ordinances, Chapter 5, Section 5-9 agricultural exemptions for building permits may only be obtained if the applicant, **before commencing construction**, files an application with the Building Official, together with the fee established by resolution of the Board of Supervisors to offset the building department's cost of processing the application, and secures from said Building Official a determination in writing that such construction is exempt for the requirements of Chapter 5.

4. Failure to obtain a building permit for a structure, prior to commencing construction, which would otherwise be considered agriculturally exempt will result in the loss of the agricultural exemption and the building permit shall be processed in accordance with Kings County Code of Ordinances, Chapter 5.
5. A minimum of (2) sets of plans and calculations signed by an architect or engineer licensed to practice in the State of California shall be required for all structures.
6. Prior to issuance of building permits (2) additional site plans shall be submitted, identifying each structure and the building permit assigned to said structure.
7. The applicant is responsible for contacting the Building Division to request a final inspection of the structures prior to occupying the structures and prior to startup of the operation. No building or structure shall be used or occupied until the Building Division has issued a Certificate of Occupancy.
8. All drive approaches and durable dustless surfaces shall be installed prior to the final inspection and maintained as per County Standards.
9. School fees based on square footage of milk barn expansion shall be added to the cost of the building permit, unless the school district provides an exemption from the school fees.
10. Public Facilities Impact Fees for the milk barn expansion shall be payable prior to the issuance of the building permit.
11. All construction shall conform to the current adopted California Building Code, California Electrical Code, California Mechanical Code, California Plumbing Code, and California Energy Code.

KINGS COUNTY PUBLIC WORKS DEPARTMENT Contact Tony Gomes at the Kings County Public Works Department at (559) 852-2694, regarding the following requirements:

1. All requirements required hereafter shall conform to the Kings County Improvement Standards.
2. All other alternatives to Public Works requirements must be approved by the Kings County Public Works Department.
3. Access to the site from a public road must be provided, and must be approved by the County.
4. Drive approaches shall be constructed in accordance with Section 205 of the *Kings County Improvement Standards* and shall be asphalt concrete.
5. The dairy facility continues to have track-out of dirt onto 8 ½ Avenue during wet weather which has been a problem in the past. The property owner shall reduce or eliminate track-out by placing a minimum 4” thickness of 1 ½ inch to 2 inch sized rock on all unsurfaced lanes, access roads, feed alleys and driveways serving the homes. Any driveway used by milk trucks/tankers, where the wheels of the trucks create a turning movement, shall be surfaced in accordance with Section 303.G. and Drawing 3036 of the *Kings County Improvement Standards* which requires two (2) inches of Type “B” Asphalt Concrete over six (6) inches of R-70 Native @ 95% compaction under the “Heavy Use (Alternative Design)”.

6. Encroachment permits for drive approaches and other work in the right of way must be obtained from the Public Works Department.
7. All drainage shall be contained on-site in accordance with Section 404-C of the *Kings County Improvement Standards*.

KINGS COUNTY FIRE DEPARTMENT Contact Mike Virden of the Kings County Fire Department at (559) 852-2884 regarding the following requirements:

1. Expansion shall not interfere with fire department access. No structure or future structure shall be farther than 150 feet from fire apparatus access. Access roads shall be provided if fire apparatus access distance is exceeded.
2. Access roads shall be of an all-weather surface capable of supporting heavy fire apparatus. Access roads shall be 20 feet in width and have a minimum 13'6" of vertical clearance.

KINGS COUNTY HEALTH DEPARTMENT Contact Lee Johnson at the Kings County Health Department, Division of Environmental Health Services (KCHDEHS) at (559) 852-2631, regarding the following requirements:

1. This facility maintains an existing "Hazardous Materials Inventory and Business Plan" (HMBP) with the KCHDEHS. If the new construction areas will be used to store hazardous materials above reportable quantities, then the HMBP must be updated to reflect this change within 30 days of use.

TULARE COUNTY HEALTH DEPARTMENT (Contact Allison Shuklian at the Tulare County Department of Health and Human Service, Environmental Health Services at (559) 733-6441, regarding the following requirements.)

1. This new facility shall meet the requirements of Division 15 of the Food and Agricultural Code and Title 3 of the California Code of Regulations.
2. The applicant shall provide three (3) sets of detailed plans, of the proposed addition to this facility, to the Tulare County Milk Inspection Service for review and approval prior to issuance of any building permits.
3. No well shall be located within 100 feet of any confined animal enclosure.
4. All corrals, lagoons and crop lands shall be properly managed to prevent a nuisance of odors, dust and vector harborage and breeding.
5. All new sewage disposal systems shall maintain a minimum setback of 100 feet from all wells.

KINGS MOSQUITO ABATEMENT DISTRICT (Contact Steven Giles at the Kings Mosquito Abatement District at (559) 584-3326 regarding the following requirement.):

1. The site shall be maintained as per regulations of the Kings Mosquito Abatement District to control vectors.
2. Variances were issued on August 8, 2008 to allow wastewater holding ponds 400' x 140' and 160' x 100' provided that the overall size should allow for wave action to occur to reduce mosquito larvae production.
3. All wastewater holding and solid separator ponds shall be surrounded by lanes at least twenty feet in width and nothing (i.e., calf pens, utility lines, hay stacks, silage, tires, equipment, etc.) shall be placed in the area of the holding ponds which would prevent passage or use of vector control equipment.
4. Any fencing placed around the wastewater and solids ponds shall be placed outside the twenty foot lanes and gates provided for access.
5. All wastewater designs shall include a solids separation system. If separator ponds are the exclusive means of solids removal, two or more separator ponds are required. These ponds shall not be more than sixty feet in width.
6. No drainage lines shall by-pass the separator ponds, except those which provide for normal corral run-off. All such drains must be sufficiently graded to prevent solids accumulation in the holding ponds.
7. Floatage of any solid substance which could provide harborage for immature mosquito stages shall be kept out of all wastewater holding ponds.
8. The owner shall be responsible for keeping vegetative growth from all areas of the wastewater and solids separation ponds. This includes access lanes, interior pond embankments, and any weed growth that might become established on the pond surface.
9. Wastewater discharged for irrigation purposes shall be managed so it does not stand for more than four days.
10. Any deviations desired from these requirements must be submitted to the District for prior review and approval.

SAN JOAQUIN VALLEY AIR POLLUTION CONTROL DISTRICT Contact David McDonough at SJVAPCD at (559) 230-5920, regarding the following requirements.)

1. The operator shall comply with all San Joaquin Valley Air Pollution Control District Compliance Assistance Bulletins concerning *Regulation VIII* requirements and SJVAPCD letter dated May 19, 2010, which is included in Appendix A of the Draft EIR.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD (Contact Jorge Baca at the Central Valley Region of CRWQCB at (559) 445-6076, regarding the following requirements.)

1. The applicant shall review and comply with all applicable CRWQCB requirements including General Order No. R5-2007-0035, General Order for Existing Milk Cow Dairies.
2. The applicant shall also comply with all necessary corrective measure addressed in the CRWQCB comments letter dated December 31, 2008 and the Review of Report of Waste Discharge dated December 15, 2008, which is included in Appendix A of the Draft EIR.

CALIFORNIA STATE BOARD OF EQUALIZATION (For general information, please call the Board of Equalization at 1-800-400-7115).

1. Sales or use tax may apply to business activities on the site. The applicant may seek written advice regarding the application of tax to your particular business by writing to the nearest State Board of Equalization office.

KINGS COUNTY ASSOCIATION OF GOVERNMENTS (Contact Executive Director, Teri King, at the Kings County Association of Governments at (559) 582-3211, Extension 2678, regarding the following requirements.)

1. Kings County has only three STAA (Surface Transportation Assistance Act) approved routes, State Route 198, State Route 41 and Interstate 5, which may be used by STAA trucks. STAA trucks are, in many cases longer than a “California Legal” truck and may not operate on County roadways.

The foregoing Resolution was adopted on a motion by Commissioner _____ and seconded by Commissioner _____, at a regular meeting held on November 5, 2012, by the following vote:

AYES: COMMISSIONERS
NOES: COMMISSIONERS
ABSTAIN: COMMISSIONERS
ABSENT: COMMISSIONERS

KINGS COUNTY PLANNING COMMISSION

Riley Jones, Chairperson

WITNESS, my hand this _____ day of _____, 2012.

FOR THE
SOZHINO DAIRY EXPANSION PROJECT
FINAL ENVIRONMENTAL IMPACT REPORT
(SCH # 20100307/CUP 09-07)**

INTRODUCTION

The Planning Commission of the County of Kings (“County”) hereby makes the following Findings of Fact and Statement of Overriding Considerations concerning the Final Environmental Impact Report (SCH #20100307/CUP 09-07) for the Sozhino Dairy Expansion Project (“Project”), pursuant to the California Environmental Quality Act, Public Resources Code § 21000, *et seq.* (“CEQA”), and its implementing regulations, California Code of Regulations, title 14, § 15000, *et seq.* (“CEQA Guidelines”).

The Final Environmental Impact Report (“Final EIR”) prepared for the Project consists of (1) the Draft EIR (Executive Summary; Introduction, Project Description and Environmental Setting; Setting, Impacts and Mitigation Measures; Evaluation of Alternatives; Cumulative Impacts; Other Mandatory CEQA Sections; and Mitigation Reporting and Monitoring Program) and appendices; (2) any comments received concerning the Draft EIR; and (3) responses to comments. The Final EIR contains the Introduction concerning the CEQA Process in Section One, a Summary of the Draft EIR (Project Description, Project Objective, and Summary of Impacts and Mitigation Measures for the Proposed Project) in Section Two, and Comments, Responses, and Corrections to the Draft EIR in Section Three.

The environmental effects, proposed mitigation measures and alternatives analyzed in the Draft EIR, and the public comments and responses thereto contained in the Final EIR, have influenced the design of the Project. These environmental documents and procedures reflect the County’s commitment to incorporate the environmental considerations identified during the CEQA process into the final project design.

1.0 PROJECT DESCRIPTION

1.1 Project Location

The Sozinho Dairy is situated in a rural unincorporated area southeast of Hanford. The address is 11447 8 1/2 Avenue. It is located between Hanford-Armona Road to the north, Houston Avenue to the south and west of Highway 43 (see Figures 2-1 and 2-2). The 60.6 acre dairy facility is located within the Remnoy USGS Topographic Quadrangle, in the SW 1/4 of the NE 1/4 of the eastern 1/2 of Section 5, T19 South – Range 22 East, Mount Diablo Base and Meridian. The Kings County Assessor's Parcel Numbers (APNs) for the total dairy site are set forth on page 2-1 of Chapter 2 of Volume 2 (Draft EIR) of the Final EIR.

1.2 Purpose and Need

The existing Sozinho Dairy is currently milking 940 Holstein milk cows with a support stock of 710 for a total herd size of 1,650 head. The owner/applicant has applied for a conditional use permit (CUP) to increase the herd size and associated dairy facilities to 1,650 Holstein milk cows with support stock of 3,466 for a total herd size of 5,116 head. To accommodate the increased number of cows the dairy facility site will be expanded from 46.8 acres to 60.6 acres. It is located at 11447 8 1/2 Avenue between Hanford-Armona Road and Houston Avenue.

The project site consists of two existing dairy facilities, the South Dairy and the North Dairy, which would be combined and expanded as a result of Conditional Use Permit No. 09-07. The South Dairy was subject to the requirements of Conditional Use Permit No. 96-06, which allowed a maximum of 530 milk cows and 710 head of support stock for a total of 1,240 head (972.5 animal units). CUP No. 96-06 was approved on March 3, 1997 when the Kings County Planning Commission adopted Resolution No. 97-03. The North Dairy was subject to the requirements of Site Plan Review No. 08-45, which allowed a maximum of 574 animal units. SPR No. 08-45 was approved by the Kings County Zoning Administrator on December 17, 2008.

Subsequent to the approval of CUP No. 96-06 the herd for the South Dairy was expanded well above the permitted levels without first obtaining the required zoning permit. The milk cows increased to 940 and the support stock increased to 1,605 head, for a total of 2,545 head. In addition, numerous facilities were added without first obtaining the required zoning permit. The facilities that were added without obtaining a zoning permit include a large number of additional calf hutches, construction of an equipment shade structure, installation of a tuff shed with an air conditioner and electrical wiring added to the facility, a new lagoon was constructed, six (6) new shade structures were constructed, new corrals were constructed, and construction was started for an addition to a milking parlor.

As a result of the unpermitted herd expansion and the unpermitted addition of new facilities, the South Dairy was issued a Notice of Violation on April 28, 2008. CUP No. 09-07 has been submitted in order to bring the site into compliance with the Dairy Element of the *Kings County General Plan* and the *Kings County Zoning Ordinance*.

1.3 Project Components

The owner/operator of the Sozinho Dairy is currently operating a 940 Holstein milk cow dairy and has applied to Kings County for a Conditional Use Permit (CUP No. 09-07) to expand the number of Holstein milk cows to 1,650 head. The existing and proposed dairy facilities and operations are described in detail in Table 2-1 of the Draft EIR.

The CUP 09-07 application submitted by the owner/operator describes the existing dairy facility site purchased by the applicant in 1979 referred to as the south facility, and a nearby existing dairy facility site purchased by the applicant in 2007, identified as the north facility. Both facilities contain a milking parlor, barns, shades, corrals, and lagoons. To accommodate the increased herd size the combined dairy facility site will be expanded from 46.8 acres to 60.6 acres.

Development of new structures, most of which were constructed prior to the owner/operator's submittal of an application for a Conditional Use Permit, are shown on Figure 2-3. The expansion involves two phases and includes new cattle shades, corrals, hay barns, calf pens and other improvements as listed in Table 2-2 of the Draft EIR.

The Project is designed to maximize the available land for the production of feed to meet the dairy's forage needs, thereby minimizing the necessity for imported feed. The 368 net farmable acres will be planted in corn, sudan and wheat silage (triple cropped). Throughout the year, water in the retention/anaerobic processing ponds will be used as a fertilizer additive, mixed with clear irrigation water, subject to agronomic requirements of the triple cropping schedule, to irrigate the cropping fields associated with the dairy.

The dairy facility will house milking cows, dry cows, heifers and calves in flushed freestalls, flushed corrals, and scraped corrals as shown in Table 2-3 of the Draft EIR. A system of lagoons will be used for treating and storing dairy process water and manure. All corrals, lanes, and other areas occupied by cows will be graded to ensure runoff water will flow into and be contained within the lagoon system until used for fertilizer or irrigation purposes

The Project is described in greater detail in Chapter 2.0 (Project Description and Environmental Setting) of the Draft EIR.

1.4 Project Objectives

The objective of the Project is to expand and operate an economically viable and competitive dairy facility in compliance with applicable laws and regulations, optimally utilizing the available land resource, and mitigating any environmental impacts to the extent feasible and as required by CEQA.

2.0 ENVIRONMENTAL PROCEDURES

2.1 Lead Agency

Pursuant to CEQA Guidelines §15367, the County is the “lead agency” for the purpose of preparing the environmental review required by CEQA. The environmental review prepared by the County will be used by the Planning Commission and other state and local agencies in their respective decisions regarding the following actions associated with the Project:

- Approval by Kings County of a Conditional Use Permit (CUP 09-07);
- Acceptance by the California Regional Water Quality Control Board, Central Valley Region of a Report of Waste Discharge;
- Issuance of an Authority to Construct (ATC) and Permit to Operate (PTO) by the San Joaquin Valley Air Pollution Control District; and
- Issuance of a Dairy Permit by the California Department of Food and Agriculture (CDFA).

2.2 Prior Environmental Documents

CEQA provides that: if a proposed project is consistent with the General Plan of a local agency and an EIR was certified with respect to that General Plan, the environmental review of the proposed project shall be limited to effects on the environment which are peculiar to the parcel or to the project and which were not addressed as significant effects in the prior EIR or which substantial new information shows will be more significant than described in the prior EIR. (Public Resources Code § 21083.3(b); CEQA Guidelines § 15183.(a).) This streamlines the review of such projects and reduces the need to prepare repetitive environmental studies.

A program environmental impact report (PEIR), pursuant to Section 15168 of the CEQA Guidelines was prepared and certified in support of the Dairy Element of the Kings County General Plan which was subsequently adopted by the Kings County Board of Supervisors on July 30, 2002. The PEIR provided the required environmental assessment for the adoption of the Dairy Element, and the construction of projects that meet the standards established in the PEIR. The Dairy Element addressed all of the potentially significant impacts that were

identified and provided mitigation measures that reduced most of the impacts to a level that was less than significant. Projects that do not meet the standards in the PEIR and thus require further environmental review, may utilize information in the PEIR to complete the environmental review required under CEQA. The PEIR was included by reference in the Dairy Element and was included by reference in the Final EIR for the Project and was made a part thereof. The PEIR for the Dairy Element is available for review at the Kings County Community Development Agency, Building No. 6, Kings County Government Center, 1400 W. Lacey Blvd., Hanford, California and on the Kings County Community Development Agency website at www.countyofkings.com/planning/dairy.html.

In addition, CEQA Guidelines section 15183(b) provides that: in approving a project meeting the requirements of this section, a lead agency shall limit its examination of environmental effects to those which the agency determines, in an initial study or other analysis, are peculiar to the project or the parcel on which the project would be located, were not analyzed as significant effects in a prior EIR on the General Plan or community plan with which the project is consistent, are potentially significant off-site impacts and cumulative impacts which were not discussed in the prior EIR prepared for the General Plan, or are previously identified significant effects which, as a result of substantial new information which was not known at the time the EIR was certified, are determined to have a more severe adverse impact than discussed in the prior EIR.

Pursuant to Section 15183(b) of the CEQA Guidelines, an Initial Study of the potential environmental effects of the expansion and operation of the Project was prepared and mailed to local, state and federal agencies, and to other interested agencies and citizen groups on May 5, 2010. Appendix A of the Draft EIR contains a copy of the Sozinho Dairy Expansion Initial Study. The Initial Study determined that the Project will not have significant effects on Aesthetics, Agriculture and Forest Resources, Biological Resources, Cultural Resources, Geology/Soils, Hazards and Hazardous Materials, Mineral Resources, Hydrology and Water Quality, Noise, Population and Housing, Public Services and Recreation. The Initial Study further determined that the Project may have the following significant effects on the environment which are peculiar to the Project and which were not analyzed in the PEIR: Air Quality, including potential short and long-term air quality impacts associated with the Project; Greenhouse Gas Emissions, including the conditions and operations that produce greenhouse gases; and Land Use, including potential impacts on surrounding land uses and impacts related to project compliance with Kings County Dairy Element, land use regulations, and zoning. Therefore, the County undertook preparation of an EIR for the Project.

2.3 Environmental Impact Report

Pursuant to CEQA Guidelines §15080, *et seq.*, the County prepared an Environmental Impact Report (“EIR”) to analyze the potential impacts of the

Project on the environment. The Final EIR consists of (1) the Draft EIR and appendices; (2) any comments received concerning the Draft EIR; and (3) responses to these comments. The Final EIR contains all of the information required by CEQA Guidelines §15132.

2.4 Dairy Element Compliance

As required by the Dairy Element of the Kings County General Plan, the owner/operator prepared and submitted the Sozinho Dairy Technical Report to the Kings County Community Development Agency on August 31, 2009 (Appendix H of the Draft EIR). The Kings County Community Development Agency determined the Sozinho Dairy Technical Report and Dairy Site Plan deviated from the Dairy Element's policies and standards and that additional environmental review was required. A copy of Dairy Element Findings for Conditional Use Permit No. 09-07, Sozinho Dairy is included in the Draft EIR as Appendix G.

Section III.B, on Page DE-18 of the Dairy Element, states that when the expansion of an existing dairy does not or cannot meet all regulations, policies, mitigation requirements, standards, etc. in the Dairy Element, the application will be processed as an application for a conditional use permit (CUP). The review of such a CUP will include CEQA review beyond the Program EIR, which may include tiering of environmental documents as appropriate.

Objective DE 2.1, on Page DE-18 of the Dairy Element, states that any additional environmental review associated with the CUP process shall only be required to address the deviation from the Dairy Element site plan review process requirements.

Policy DE 2.1g, on Page DE-20 of the Dairy Element, states that an application that does not, or cannot, meet all regulations, policies, mitigation requirements, standards, etc. of the Dairy Element shall be submitted as an application for a conditional use permit (CUP) which will include additional environmental review. The Planning Commission may consider alternatives to the Dairy Element's regulations, policies, mitigation requirements, standards, etc., but must ensure that any alternative accomplish the same or higher level of performance as required by the Dairy Element, thus ensuring that the project is consistent with the Dairy Element of the General Plan.

Based on Objective DE 2.1 and Policy DE 2.1g of the Dairy Element, the Draft EIR is only required to analyze the areas of the Project that deviate from the standards of the Dairy Element. No additional environmental review is required for areas of the Project that comply with the standards of the Dairy Element. The Dairy Element Findings for Conditional Use Permit No. 09-07 (see Draft EIR, Appendix G) document the areas of the Project that are consistent with the standards of the Dairy Element. The Dairy Element Findings for Conditional Use

Permit No. 09-07 also document the areas of the Project that deviate from the standards of the Dairy Element.

2.5 Public Participation

Environmental review of the Project began on May 6, 2010, with the publication of a Notice of Preparation (NOP) of the EIR and a 30-day public review period for the NOP and the Initial Study. The Draft EIR was completed and made available for public review on May 4, 2012. The 45-day public review period required by CEQA began on May 4, 2012, and ended on June 15, 2012. One public agency, the Native American Heritage Commission, provided comments on the Draft EIR. No comments on the Draft EIR were received from any private organization or individual member of the public. The comments of the Native American Heritage Commission and the County's response to them are included in the Final EIR as required by CEQA Guidelines sections 15088 and 15132. The Final EIR was completed and the County's responses to comments were made available for review on October 26, 2012. A public hearing concerning certification of the Final EIR was held by the Planning Commission on November 5, 2012, at which interested agencies, organizations and persons were given an opportunity to comment on the Final EIR and the Project.

2.6 Record of Proceedings

For purposes of CEQA and the findings set forth below, the administrative record of the County's decision concerning certification of the Final EIR for the Project shall include the following:

- The Draft EIR (April 2012);
- The Final EIR (July 2012);
- The Errata to the Final EIR (October 2012);
- The appendices to the Draft EIR;
- All documents and other materials listed as references and/or incorporated by reference in the Draft EIR, and Final EIR, including but not limited to the materials identified in the Draft EIR, Chapter 9 (Bibliography);
- The Final Program Environmental Impact Report certified in support of the Dairy Element of the Kings County General Plan by the Kings County Board of Supervisors on July 30, 2002;
- All reports, applications, memoranda, maps, letters, and other documents prepared by the County staff and consultants for the Project which are

before the Planning Commission;

- All documents or other materials submitted by interested persons and public agencies in connection with the Draft EIR and the Final EIR;
- The minutes, tape recordings, and verbatim transcripts, if any, of the public hearing held on November 5, 2012, concerning the Final EIR and the Project; and
- Matters of common knowledge to the Planning Commission and the County, including but not limited to the Kings County General Plan.

The custodian of the documents and other materials comprising the administrative record of the County's decision concerning certification of the Final EIR is the Community Development Agency of the County of Kings. The location of the administrative record is the Community Development Agency's office at Building No. 6, Kings County Government Center, 1400 West Lacey Boulevard, Hanford, California 93230. (Public Resources Code § 21081.6(a)(2).)

3.0 FINDINGS UNDER CEQA

3.1 Purpose

CEQA requires the County to make written findings of fact for each significant environmental impact identified in the Final EIR (CEQA Guidelines §15091). The purpose of the findings is to systematically restate the significant effects of the Project on the environment and to determine the feasibility of mitigation measures and alternatives identified in the Final EIR which would avoid or substantially lessen the significant effects. Once it has adopted sufficient measures to avoid or substantially lessen a significant impact, the County is not required to adopt every mitigation measure identified in the Final EIR or otherwise brought to its attention. If significant impacts remain after application of all feasible mitigation measures, the County must review the alternatives identified in the Final EIR and determine if they are feasible. These findings set forth the reasons, and the evidence in support of, the County's determinations.

3.2 Terminology

A "finding" is a written statement made by the County which explains how it dealt with each significant impact and alternative identified in the Final EIR. Each finding contains an ultimate conclusion regarding each significant impact, substantial evidence supporting the conclusion, and an explanation of how the substantial evidence supports the conclusion.

For each significant effect identified in the Final EIR, the County is required by CEQA to make a written finding reaching one or more of the following

conclusions:

- (1) Changes or alterations have been required in, or incorporated into, the project which mitigate or avoid the significant effect identified in the EIR;
- (2) Such changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency; or
- (3) Specific legal, economic, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the Final EIR (CEQA Guidelines §15091(a)).

A mitigation measure or an alternative is considered “feasible” if it is capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social and technological factors (CEQA Guidelines §15364).

3.3 Legal Effect

To the extent these findings conclude mitigation measures identified in the Final EIR are feasible and have not been modified, superseded or withdrawn, the County hereby binds itself and any other responsible parties, including the Project Applicant and their successors in interest, to implement those mitigation measures. These findings are not merely informational, but constitute a binding set of obligations upon the County and responsible parties, which will take effect if and when the County adopts a resolution certifying the Final EIR and the County and/or the responsible agencies adopt resolution(s) approving the Project.

3.4 Mitigation Monitoring and Reporting Program

In adopting these findings, the County also adopts a mitigation monitoring and reporting program pursuant to Public Resources Code §21081.6. This program is designed to ensure the Project complies with the feasible mitigation measures identified below during implementation of the Project. The Mitigation Monitoring and Reporting Program is set forth in Chapter 7 of the Draft EIR and is adopted by the County concurrently with these findings and is incorporated herein by this reference.

4.0 FINDINGS REGARDING DIRECT SIGNIFICANT EFFECTS

The Project will result in project-related significant environmental effects with respect to Air Quality (Toxic Air Emissions Health Risk, Operational Emission of Criteria Pollutants, PM_{2.5}, Operational Emission of Criteria Pollutants, Volatile Organic Compounds (VOCs), Methane Emissions, Ammonia Emissions, Odor

Emissions and Ambient Air Quality), and Land Use (Separation of dairy facilities by ¼ mile, Residences within ¼ mile). These significant environmental effects, and the mitigation measures identified to avoid or substantially lessen them, are discussed in detail in Chapter 3 of the Draft EIR, Sections 3.1 (Air Quality) and 3.3 (Land Use). A summary of significant impacts and mitigation measures for the Project is set forth in Section Two of the Final EIR, Table ES-1, Summary of Potentially Significant Impacts and Mitigation Measures, and in Table ES-2, Summary of Impacts Which Remain Significant After Mitigation.

Set forth below are the findings regarding the potential project-related significant effects of the Project. The findings incorporate by reference the discussion of potential significant impacts and mitigation measures contained in the Draft EIR (see Chapter 3). The Final EIR, which includes the Draft EIR and appendices, is referred to in the findings below as the “EIR.”

4.1 Air Quality (Toxic Air Emissions Health Risk)

Potentially Significant Impact: The EIR identifies a potential significant impact to Air Quality (Toxic Air Emissions Health Risk) in that the Project will increase the predicted individual lifetime cancer risk above the San Joaquin Valley Air Pollution Control District (SJVAPCD) significance threshold at five residential dwellings and also exceed the acute hazard index at seven non-residential sites to the southwest within ¼ mile of the dairy site boundary. Detailed information and analysis regarding this significant potential impact is provided in Volume 2 (Draft EIR), Section 3.1 (Impact # 3.1.1) of the EIR.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the Project which lessen the significant environmental effect to Air Quality (Toxic Air Emissions Health Risk) identified in the EIR, but not to a level below significance; therefore, pursuant to CEQA Guidelines § 15093, the County has balanced the benefits of the Project against its unavoidable environmental risks and has determined that this impact is acceptable for the reasons stated in the Statement of Overriding Considerations below.

Facts in Support of Finding: A human health risk assessment (HRA) of air toxic emissions associated with the dairy operations was performed, which predicted individual lifetime cancer risk and non-cancer health hazard indices at residential and non-residential receptors in the vicinity of the Project site. The HRA was performed using guidelines from the Office of Environmental Health Hazards Assessment and the San Joaquin Valley Air Pollution Control District (SJVAPCD). Maximum off-site health risk values associated with dairy operations were determined for the existing site and Project. The health risks of the Project relative to the existing site (i.e., proposed project plus existing site) were compared to the SJVAPCD’s risk thresholds. The risk results represent the maximum project impacts relative to the existing site. The maximum individual

lifetime cancer risk increment at an off-site residential receptor is predicted to be 13 in a million, at a residence located east of the dairy, west of 8th Avenue (residence #7 on Figure 3.1-2). The risk impact at this receptor would exceed the SJVAPCD significance threshold of 10 in a million. The maximum acute hazard index at a residential receptor located south-southwest of the dairy (residence #14 on Figure 3.1-2) is predicted to be 1.8. The acute hazard at this receptor would exceed the SJVAPCD significance threshold of 1.0. The Project will increase the predicted individual lifetime cancer risk above the SJVAPCD significance threshold at five residential dwellings and also exceed the acute hazard index at seven non-residential sites to the southwest within $\frac{1}{4}$ mile of the dairy site boundary. The potential significant impact to Air Quality (Toxic Air Emissions Health Risk) will be mitigated, but not to a level less than significant, by the Project Applicant's implementing the following measure described in Mitigation Measure 3.1.1, which is set forth in full in the Draft EIR, Section 3.1 (Biological Resources Mitigation Measures), pages 3.1-30 through 3.1-31:

- Cattle Housing Dust (PM_{2.5})
 1. Paved feedlanes, where present shall be a width of at least 8 feet along the corral side of the feedlane fence for milk and dry cows and at least 6 feet along the corral side of the feedlane for heifers; and
 2. Scrape, vacuum, or flush concrete lanes in corrals at least once every day for mature cows and every 7 days for support stock.
- Dairy Equipment and Truck Exhaust Emissions - Nitrogen Oxide (NOx)
 1. The idling time of all equipment used at the site shall not exceed five minutes;
 2. As much as possible, alternative fueled or catalyst-equipped diesel equipment shall be used at the dairy site;
 3. Electrically driven equivalents to fossil-fueled equipment shall be utilized when available provided they are not run via a portable generator; and
 4. Employees shall be encouraged to carpool-travel to and from the dairy site.
- Volatile Organic Compounds (VOC), Ammonia (NH₃) and Hydrogen Sulfide (H₂S) Emissions:
 1. Remove manure that is not dry from individual cow freestall beds or rake, harrow, scrape, or grade freestall bedding at least once every seven days.

Implementation of this mitigation measure will reduce but not eliminate

operational emissions of PM_{2.5}, NO_x, VOC, NH₃, and H₂S, and the impact will remain significant. Therefore, despite the incorporation of Mitigation Measure 3.1.1, the Project's impact on Air Quality (Toxic Air Emissions Health Risk) is considered significant and unavoidable, and a Statement of Overriding Considerations pursuant to CEQA Guidelines §15093 is required.

4.2 Air Quality (Particulate Matter (PM₁₀) and Fine Particulate Matter (PM_{2.5}) Construction Impacts)

Potentially Significant Impact: The EIR identifies potentially significant impacts to Air Quality (Particulate Matter (PM₁₀) and Fine Particulate Matter (PM_{2.5}) Construction Impacts) in that due to the relatively large project area and projected intensity of dust-producing activities during construction, PM₁₀/PM_{2.5} emissions generated during construction will constitute a temporary potentially significant impact, possibly exposing residents downwind to elevated PM₁₀ concentrations and contributing to the regional PM₁₀/PM_{2.5} emission burden. Detailed information and analysis regarding this significant potential impact is provided in the Draft EIR, Section 3.1 (Impact # 3.1.2).

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the Project which avoid or substantially lessen the significant environmental effect to Air Quality (Particulate Matter (PM₁₀) and Fine Particulate Matter (PM_{2.5}) Construction Impacts) as identified in the EIR.

Facts in Support of Finding: Project construction will result in numerous activities that generate dust. Construction activities associated with project development include site preparation, soil excavation, grading, equipment traffic on paved and unpaved surfaces, and the construction of dairy structures. Grading, earthmoving and excavation are the activities that generate the most PM₁₀ and PM_{2.5} emissions. The duration of construction for the Project is projected to be six to nine months. According to SJVAPCD guidance, control measures are applicable to construction projects that would be expected to generate large PM₁₀/PM_{2.5} emissions, and additional control measures are applicable to project with large construction sites, located near sensitive receptors, or that for other reasons warrant additional emissions reductions. The SJVAPCD has developed a menu of PM₁₀/PM_{2.5} control options that define the minimum content of a construction dust control program. Regulation VIII control measures are required for all construction projects to reduce the amount of PM₁₀/PM_{2.5} emissions generated from fugitive dust sources. As required by the Dairy Element of the Kings County General Plan, the owner/applicant has prepared a Fugitive Dust Emissions Control Plan (FDECP) that is in compliance with the SJVAPCD's Regulation VIII emission control measures. A copy of the FDECP is contained in Appendix H - Sozinho Dairy Technical Report (pages 105-110) in the Draft EIR. From the perspective of the SJVAPCD, compliance with Regulation VIII and implementation of the Project-pertinent SJVAPCD

control measures will constitute sufficient mitigation to reduce PM₁₀ impacts to a level below significance. Therefore, the potential significant impact to Air Quality (Particulate Matter (PM₁₀) and Fine Particulate Matter (PM_{2.5}) Construction Impacts) will be mitigated to a level less than significant through the Project Applicant's preparation and submittal of an FDECP. Implementation of this measure will reduce the potential impact to Air Quality (Particulate Matter (PM₁₀) and Fine Particulate Matter (PM_{2.5}) Construction Impacts) to a level less than significant.

4.3 Air Quality (Operational Emission of Fine Particulate Matter (PM_{2.5}))

Potentially Significant Impact: The EIR identifies a potentially significant impact to Air Quality (Operational Emission of Fine Particulate Matter (PM_{2.5})) in that PM₁₀/PM_{2.5} will be generated by several activities associated with dairy operations, principally dust from cattle movement on and periodic maintenance of unpaved surfaces, and continued farming operations. Detailed information and analysis regarding this significant potential impact is provided in the Draft EIR, Section 3.1 (Impact # 3.1.4).

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the Project which lessen the significant environmental effect to Air Quality (Operational Emission of Fine Particulate Matter (PM_{2.5})) identified in the EIR, but not to a level below significance; therefore, pursuant to CEQA Guidelines § 15093, the County has balanced the benefits of the Project against its unavoidable environmental risks and has determined that this impact is acceptable for the reasons stated in the Statement of Overriding Considerations below.

Facts in Support of Finding: PM₁₀/PM_{2.5} will be generated by several activities associated with the Project's dairy operations, principally dust from cattle movement on and periodic maintenance of unpaved surfaces, and continued farming operations. PM_{2.5} emissions are calculated based on conversion of PM₁₀ to PM_{2.5} by multiplying CARB-derived fractions for each source category. Ammonia (NH₃) emissions would act as a precursor of PM_{2.5} in the atmosphere. To calculate PM_{2.5} from ammonia emissions is analogous to the quantification of emissions of VOC and NO_x as precursors to the formation of ozone. Just as it is not possible to convert new emissions of ozone precursors into amounts of concentrations of ozone in the atmosphere, it cannot be done for ammonia-related PM_{2.5}. Given the current uncertainty in emission rates for ammonia and the lack of a method of calculating PM_{2.5} conversion from ammonia emissions, any calculation of secondary PM_{2.5} would be speculative. Absent such speculation, and based on best available data for PM₁₀ emissions from fugitive dust, annual emissions of PM₁₀ and PM_{2.5} have been estimated and are included in Table 3.1-6 of Volume 2 (Draft EIR), Section 3.1 of the Final EIR. Existing emissions (farming related) include emission control measures in place; project emissions for this project also include emission control measures

described in Sections 2.1 and 2.2 of the Air Quality Methodology and Assumptions Report attached as Appendix B in the Draft EIR. The Project would result in an increase in PM₁₀ of 9 tons per year, which is less than the 15 tons per year SJVAPCD threshold and thus will not have a significant PM₁₀ impact. In the absence of a significance threshold, the EIR concluded that the PM_{2.5} emissions from the Project would be potentially significant. The potential significant impact to Air Quality (Operational Emission of Fine Particulate Matter (PM_{2.5})) will be mitigated, but not to a level less than significant, by the Project Applicant's implementing all feasible control measures incorporated in the SJVAPCD's Rules 4550 and 4570 (see Appendix D); in Dairy Element Policies DE 5.1d, DE 5.1e, DE 5.1f, DE 5.1g, and DE 5.1h (see Appendix F); and Mitigation Measure #3.1.1 (Draft EIR, Section 3.1, pp. 3-30 and 3-31) and Mitigation Measure #3.3.2 (Draft EIR, Section 3.1, pp. 3-58 - 3-60). Implementation of these mitigation measures will reduce but not eliminate the significant impact on Air Quality (Operational Emission of Fine Particulate Matter (PM_{2.5})), and the impact will remain significant. Therefore, despite the incorporation of all feasible mitigation measures, the Project's impact on Air Quality (Operational Emission of Fine Particulate Matter (PM_{2.5})) is considered significant and unavoidable, and a Statement of Overriding Considerations pursuant to CEQA Guidelines §15093 is required.

4.4 Air Quality (Operational Emission of Volatile Organic Compound)

Potentially Significant Impact: The EIR identifies a potentially significant impact to Air Quality (Operational Emission of Volatile Organic Compound) in that the Project would result in a significant increase in VOC emissions, primarily directly from cows and from manure decomposition that would exceed the SJVAPCD threshold of significance. Detailed information and analysis regarding this significant potential impact is provided in the Draft EIR, Section 3.1 (Impact # 3.1.5).

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the Project which lessen the significant environmental effect to Air Quality (Operational Emission of Volatile Organic Compound) identified in the EIR, but not to a level below significance; pursuant to CEQA Guidelines §15091(a)(3), specific economic considerations make infeasible one of the mitigation measures identified in the EIR; therefore, pursuant to CEQA Guidelines § 15093, the County has balanced the benefits of the Project against its unavoidable environmental risks and has determined that this impact is acceptable for the reasons stated in the Statement of Overriding Considerations below.

Facts in Support of Finding: Volatile organic compounds (VOCs) are photochemically reactive hydrocarbons that are precursors of ozone formation. Project-related VOCs are principally generated by direct emissions from cows and by manure decomposition. The San Joaquin Valley Air Pollution Control District will consider implementation of various “Best Available Control Technology” mitigation measures as conditions of issuance of an Authority to Construct (ATC) the dairy facility. The alternative measures are enumerated in SJVAPCD Rule 4570. Existing VOC emissions are 28.9 tons per year. The Project would increase VOC emissions to 56.5 tons per year, a net increase of 27.5 tons, which would result in an increase in VOC emissions, primarily directly from cows and from manure decomposition that would exceed the SJVAPCD threshold of significance and would be significant. The Project’s increase in VOC emissions reflects the emission control measures that have been implemented by the owner/operator and are described in detail in the Draft EIR, Section 3.1, page 3.1-35. Reduction of VOCs will also be accomplished with implementation of Kings County Dairy Element Policies DE 4.1a through DE 4.2b (Appendix F) which provides for specific and comprehensive manure nutrient management techniques in the operation of dairies. The EIR also evaluated whether dairy cows could be housed in an enclosed building with biofiltration of exhaust air therefrom as a VOC (and greenhouse gas) mitigation measure. The capital and operating costs for such housing and biofiltration for dairy cows in the San Joaquin Valley have been estimated by the SJVAPCD for a 3,500 milk cow dairy (Authority to Construct Application Review, Lemstra Cattle Company, September 5, 2007). The capital cost for the biofilter alone, not including housing or duct work, was estimated to be \$11,371,486. The resulting cost of VOC emission reductions was estimated to range from \$67,584 to \$86,548 per ton, far in excess of the SJVAPCD’s Best Available Control Technologies (BACTs) standard of \$17,500 per ton. Annual operating costs were estimated to be \$1,635,363 to \$1,850,657 per year. Such costs clearly render the biofiltration mitigation measure, whether designed for VOC removal or greenhouse gas reduction, infeasible for the Project. Therefore, the potential significant impact to Air Quality (Operational Emission of Volatile Organic Compound) will be mitigated, but not to a level less than significant, by the Project Applicant’s implementing all feasible control measures incorporated in the SJVAPCD’s Rules 4550 and 4570 (see Appendix D); in Dairy Element Policies DE 5.1d, DE 5.1e, DE 5.1f, DE 5.1g, and DE 5.1h (see Appendix F); and Mitigation Measure #3.1.1 (Draft EIR, Section 3.1, pp. 3-30 and 3-31) and Mitigation Measure #3.3.2 (Draft EIR, Section 3.1, pp. 3-58 - 3-60). Implementation of these mitigation measures will reduce but not eliminate the significant impact on Air Quality (Operational Emission of Volatile Organic Compound), and the impact will remain significant. Therefore, despite the incorporation of all feasible mitigation measures, the Project’s impact on Air Quality (Operational Emission of Volatile Organic Compound) is considered significant and unavoidable, and a Statement of Overriding Considerations pursuant to CEQA Guidelines §15093 is required.

4.5 Air Quality (Methane (CH₄) Generation)

Potentially Significant Impact: The EIR identifies a potentially significant impact to Air Quality (Methane (CH₄) Generation) in that Project will result in the emission of methane from the breakdown of cellulose fiber by bacteria in cattle stomachs and the decomposition of manure in cattle housing areas including freestalls, flushed corrals and dry lots, the spreading of manure and liquid manure in the fields, the storage of fermented feed silage, and as emissions from lagoons. Detailed information and analysis regarding this significant potential impact is provided in Volume 2 (Draft EIR), Section 3.1 (Impact # 3.1.7) of the EIR.

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the Project which lessen the significant environmental effect to Air Quality (Methane (CH₄) Generation) identified in the EIR, but not to a level below significance; pursuant to CEQA Guidelines §15091(a)(3), specific economic considerations make infeasible one of the mitigation measures identified in the EIR; therefore, pursuant to CEQA Guidelines § 15093, the County has balanced the benefits of the Project against its unavoidable environmental risks and has determined that this impact is acceptable for the reasons stated in the Statement of Overriding Considerations below.

Facts in Support of Finding: Methane (CH₄) is generated by the breakdown of cellulose fiber by bacteria in cattle stomachs and the decomposition of manure in cattle housing areas including freestalls, flushed corrals and dry lots, the spreading of manure and liquid manure in the fields, the storage of fermented feed silage, and as emissions from lagoons. The Project-related CH₄ emissions are 940 tons per year, which constitute a net increase in the CH₄ emissions of 547 tons per year. Because there are no local or State guidelines or thresholds of significance for determining the significance of methane emissions, the EIR determined the project-level impacts are significant. Methane generation impacts are reduced by project-level management practices that are listed in the discussion section for Impact #3.1.5, which includes measures from SJVAPCD's Rule 4570 list of options. Rule 4570 contains mitigation measures to limit emissions of volatile organic compounds (VOC) from confined animal facilities. One measure that could be required by the SJVAPCD is the installation and operation of a covered anaerobic treatment lagoon ("digester") that would reduce VOC and methane emissions from these lagoons. Although there is increasing interest in digesters, the installation and operation of dairy waste digesters currently are experimental and largely government subsidized. In addition, evaluations of the economic and technological feasibility of digester technologies demonstrates that digesters with on-site power generation are not feasible for the Project because there are no utility company transmission lines near the Project to which generated gas can be transferred. Therefore, the potential significant impact to Air Quality (Methane (CH₄) Generation) will be mitigated, but not to a

level less than significant, by the Project Applicant's implementing all feasible control measures incorporated in the SJVAPCD's Rule 4570 (see Appendix D); in Dairy Element Policies DE 4.1a through DE 4.2b (see Appendix F). Implementation of these mitigation measures will reduce but not eliminate the significant impact on Air Quality (Methane (CH₄) Generation), and the impact will remain significant. Therefore, despite the incorporation of all feasible mitigation measures, the Project's impact on Air Quality (Methane (CH₄) Generation) is considered significant and unavoidable, and a Statement of Overriding Considerations pursuant to CEQA Guidelines §15093 is required.

4.6 Air Quality (Ammonia (NH₃) Generation)

Potentially Significant Impact: The EIR identifies a potentially significant impact to Air Quality (Ammonia (NH₃) Generation) in that Project will result in the emission of ammonia produced during anaerobic decomposition of manure which, when combined in the atmosphere with other pollutants, may produce particulate matter that can decrease air quality and visibility. Detailed information and analysis regarding this significant potential impact is provided in the Draft EIR, Section 3.1 (Impact # 3.1.8).

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the Project which lessen the significant environmental effect to Air Quality (Ammonia (NH₃) Generation) identified in the EIR, but not to a level below significance; therefore, pursuant to CEQA Guidelines § 15093, the County has balanced the benefits of the Project against its unavoidable environmental risks and has determined that this impact is acceptable for the reasons stated in the Statement of Overriding Considerations below.

Facts in Support of Finding: Ammonia (NH₃) is produced during anaerobic decomposition of manure wherever cows are housed. Ammonia emissions, when combined in the atmosphere with other pollutants may produce particulate matter that can decrease air quality and visibility. Factors that influence ammonia production are similar to those which impact milk production and VOC emissions. There is no methodology to contain the ammonia, and it will likely disperse in relatively low concentrations over the entire site. At the low levels of concentration on dairy facilities sites it is unlikely to cause adverse affects in the human population, including sensitive receptors. The proposed project would create 70.6 tons of airborne ammonia per year. (Draft EIR, Section 3.1, Table 3.1-6.) Because there are no local or State guidelines or thresholds of significance for determining the significance of ammonia emissions, the EIR determined the project-level impacts are significant. Ammonia generation impacts are reduced by project-level management practices that are listed in the discussion section for Impact #3.1.5, which includes measures from SJVAPCD's Rule 4570 list of options. Therefore, the potential significant impact to Air Quality (Amonia (NH₃) Generation) will be mitigated, but not to a level less than significant, by the Project Applicant's implementing all feasible control measures

incorporated in the SJVAPCD's Rule 4570 (see Appendix D); in Dairy Element Policies DE 4.1a through DE 4.2b (see Appendix F). Implementation of these mitigation measures will reduce but not eliminate the significant impact on Air Quality (Ammonia (NH₃) Generation), and the impact will remain significant. Therefore, despite the incorporation of all feasible mitigation measures, the Project's impact on Air Quality (Ammonia (NH₃) Generation) is considered significant and unavoidable, and a Statement of Overriding Considerations pursuant to CEQA Guidelines §15093 is required.

4.7 Air Quality (Odor Emissions)

Potentially Significant Impact: The EIR identifies a potentially significant impact to Air Quality (Odor Emissions) in that Project will result in the emission of odors formed from dairy operations, including corrals, lagoons, and freestalls. Detailed information and analysis regarding this significant potential impact is provided in the Draft EIR, Section 3.1 (Impact # 3.1.9).

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the Project which lessen the significant environmental effect to Air Quality (Odor Emissions) identified in the EIR, but not to a level below significance; pursuant to CEQA Guidelines § 15093, the County has balanced the benefits of the Project against its unavoidable environmental risks and has determined that this impact is acceptable for the reasons stated in the Statement of Overriding Considerations below.

Facts in Support of Finding: Odor emissions are produced from dairy operations, including corrals, lagoons, and freestalls, in a complex process. Odor formation is most rapid during hot weather when anaerobic conditions set in the fastest. Conversely, atmospheric dispersion is best when heated surfaces induce gusty winds and convective turbulence. There is therefore no time of day when odor potential is minimized. Odors “generate” faster in the day, but disperse faster, while slower nocturnal chemistry is offset by more stagnant meteorology. The EIR employed the procedure outlined for odor analysis in the SJVAPCD's “Guide for Assessing and Mitigating Air Quality Impacts” (GAMAQI), including the identification of the location of sensitive receptors, which showed there are 14 off-site dwelling units within one-quarter mile of the Project site and that no odor complaints for dairy facilities in the area of the project have been filed with the Kings County Community Development Agency or the SJVAPCD. The EIR also performed dispersion modeling of ammonia (NH₃) and hydrogen sulfide (H₂S) emissions associated with proposed dairy operations (see Air Quality Methodologies and Assumptions, Appendix B). The analysis predicted maximum 1-hour NH₃ and H₂S concentrations at residential and non-residential receptors in the vicinity of the project site. Because the odor thresholds are absolute concentrations, the odor impact analysis evaluated concentrations associated with the Project by itself (*not* the proposed project minus existing site). The maximum 1-hour NH₃ concentration is below the odor detection

threshold. The maximum 1-hour H₂S concentration at an off-site residential receptor is predicted to be 76 µg/m³, at a residence located south-southwest of the dairy (residence #14 on Figure 3.2-2). This concentration would exceed the odor threshold of 11 µg/m³. A subsequent modeling analysis of this peak receptor location shows that the threshold of 11 µg/m³ would be exceeded in approximately 2 percent of all hours. The odor threshold would also be exceeded at 26 other residential receptors in the project vicinity. Based upon the modeling results that the project will exceed the maximum 1-hour hydrogen sulfide (H₂S) concentration threshold at 27 residential receptors, the EIR determined that the Project would have significant impacts related to odor emissions. Therefore, the potential significant impact to Air Quality (Odor Emissions) will be mitigated, but not to a level less than significant, by the Project Applicant's implementing all feasible control measures incorporated in the SJVAPCD's Rule 4550 and Rule 4570 (see Appendix D), in Dairy Element Policies DE 4.1a, DE 4.1b, DE 4.1d and DE 5.1b (see Appendix F), and by the preparation and filing of an Odor Management Plan (OMP) with the Community Development Agency as required by the Kings County Dairy Element. A copy of the OMP is in the Sozinho Dairy Technical Report (pages 45-51) located in Appendix H in the EIR. Implementation of these mitigation measures will reduce but not eliminate the significant impact on Air Quality (Odor Emissions), and the impact will remain significant. Therefore, despite the incorporation of all feasible mitigation measures, the Project's impact on Air Quality (Odor Emissions) is considered significant and unavoidable, and a Statement of Overriding Considerations pursuant to CEQA Guidelines §15093 is required.

4.8 Air Quality (Ambient Air Quality)

Potentially Significant Impact: The EIR identifies a potentially significant impact to Air Quality (Ambient Air Quality) in that Project operations will exceed SJVAPCD's threshold and will represent a significant contribution to an existing violation of the 24-hour PM₁₀ ambient air quality standard. Detailed information and analysis regarding this significant potential impact is provided in the Draft EIR, Section 3.1 (Impact # 3.1.11).

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the Project which lessen the significant environmental effect to Air Quality (Ambient Air Quality) identified in the EIR, but not to a level below significance; pursuant to CEQA Guidelines § 15093, the County has balanced the benefits of the Project against its unavoidable environmental risks and has determined that this impact is acceptable for the reasons stated in the Statement of Overriding Considerations below.

Facts in Support of Finding: Air quality emissions from dairy operations such as cattle housing dust, diesel powered dairy equipment exhaust, truck exhaust emissions while traveling within the dairy and road dust from trucks traveling within the dairy, contribute to 24-hour PM₁₀ concentrations in the project

area. The EIR used EPA's AERMOD dispersion model (EPA, 2006b), version 09292, to predict ambient PM₁₀ concentrations and to quantify air-borne particulate concentrations near the project site during dairy operations. The dispersion modeling was based on historical meteorological observations, the physical layout of the project site, and the estimated PM₁₀ emission rates for the dairy-related sources. Maximum off-site 24-hour PM₁₀ concentrations associated with Project operations were determined for existing conditions and the proposed project, respectively. The total impacts of the Project relative to existing conditions were compared to the SJVAPCD; threshold concentration of 10.4 µg/m³. The SJVAPCD considers an exceedence of this threshold to represent a significant contribution to an existing violation of the 24-hour PM₁₀ ambient air quality standard. AERMOD predicted 24-hour average pollutant concentrations in the air at each receptor location for each day of meteorological data. The results presented in this study reflect the highest 24-hour concentration predicted at any off-site modeled receptor location over the entire five years of meteorological data. Therefore, the model results represent a worst-case day; pollutant concentrations during most other days during the year would be less than, and often much less than, the reported values because of more favorable meteorological conditions. At the maximum receptor, the peak 24-hour PM₁₀ concentration associated with the Project was predicted to be 96.7 µg/m³, and the peak concentration associated with the existing site was predicted to be 9.2 µg/m³. Therefore, the project increment is 87.4 µg/m³ (96.7 minus 9.2, rounded off), which exceeds the SJVAPCD threshold of 10.4 µg/m³. A subsequent modeling analysis of this peak location shows that the threshold of 10.4 µg/m³ would be exceeded on approximately 4 percent of all days. Based upon the modeling results, the EIR determined that the Project would have a significant impact related to ambient air quality. Therefore, the potential significant impact to Air Quality (Ambient Air Quality) will be mitigated, but not to a level less than significant, by the Project Applicant's implementing all feasible control measures incorporated in the SJVAPCD's Rule 4550 and Rule 4570 (see Appendix D), in Dairy Element Policies DE 5.1d, DE 5.1e, DE 5.1f, DE 5.1g and DE 5.1h (see Appendix F), and Mitigation Measure #3.1.1 (Draft EIR, pp. 3-30 and 3-31) and Mitigation Measure #3.3.2 (Draft EIR, pp. 3-58 - 3-60). Implementation of these mitigation measures will reduce but not eliminate the significant impact on Air Quality (Ambient Air Quality), and the impact will remain significant. Therefore, despite the incorporation of all feasible mitigation measures, the Project's impact on Air Quality (Ambient Air Quality) is considered significant and unavoidable, and a Statement of Overriding Considerations pursuant to CEQA Guidelines §15093 is required.

4.9 Land Use (Separation of Dairy Facilities by ¼ Mile)

Potentially Significant Impact: The EIR identifies potentially significant impacts to Land Use (Separation of Dairy Facilities by ¼ Mile) in that the Project would further reduce the separation between the Sozinho Dairy facility site and the Soares Heifer Ranch facility from approximately 741 feet to approximately

392 feet and conflict with Kings County General Plan Dairy Element Policy DE 1.2h. Detailed information and analysis regarding this significant potential impact is provided in the Draft EIR, Section 3.3 (Impact # 3.3.1).

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the Project which avoid or substantially lessen the significant environmental effect to Land Use (Separation of Dairy Facilities by ¼ Mile) as identified in the EIR.

Facts in Support of Finding: Kings County General Plan Dairy Element Policy DE 1.2h requires a minimum distance of one-quarter ($\frac{1}{4}$) mile between a dairy facility and other dairy facilities or confined animal feeding operations in order to avoid potential nuisance problems, potential inter-herd disease transmission, soil and groundwater contamination, and cumulative air quality degradation. This restriction includes only the actual dairy facilities, i.e., corrals, milk barns, feed storage areas, manure storage areas, etc., but not cropland used to spread dairy process water and manure. An existing dairy which proposes to decrease the separation between its dairy facilities and another dairy's facilities to less than $\frac{1}{4}$ mile may do so only after approval of a CUP by the Planning Commission. The Project would conflict with Dairy Element Policy DE 1.2h in that it would reduce the separation between the Project site and the Soares Heifer Ranch facility from approximately 741 feet to approximately 392 feet. The potential significant impact to Land Use (Separation of Dairy Facilities by $\frac{1}{4}$ Mile) will be mitigated to a level less than significant through a significant portion of the required mitigation measures set forth in the EIR, together with mitigation measures detailed in Tables 3.1 and 4.1 of the SJVAPCD's Rule 4570, which will accomplish the same or higher level of performance as required by the Dairy Element, thus ensuring that the project is consistent with the Dairy Element of the General Plan (Policy DE 2.1g). In addition, as set forth in Mitigation Measure #3.3.2, the owner/operator shall be required to install and maintain a downwind windbreak/shelterbelt along the east and south boundary of the dairy facility site. Consisting of evergreen shrubs and trees, this dust and odor windbreak acts as a filter trapping dust particulates. The owner/operator also shall be required to implement the control measures incorporated into the Odor Management Plan (Policy and Fugitive Dust Emissions Control Plan (DE 5.1b, and 6.2d) and the Fugitive Dust Emissions Control Plan (Policy DE 5.1g, and 5.1h) contained in the Sozinho Dairy Technical Report (Appendix H, pages 48-50 and 104-110). Finally, the owner/operator shall be required to implement the control measures detailed in the Comprehensive Dairy Process Water Application Plan (Policies DE 4.2, 4.2a, 4.2b, 4.2c, and 4.2d) and the Manure Nutrient Management Plan (Policies 4.1a, 4.1b, 4.1c, 4.1e, and 4.1f) detailed in Sozinho Dairy Technical Report (pages 45-47 and 26-39), which describe the dairy management practices for handling manure properly to prevent water pollution. Implementation of these mitigation measures will reduce the potential impact to Land Use (Separation of Dairy Facilities by $\frac{1}{4}$ Mile) to a level less than significant.

4.10 Land Use (Residences ¼ Mile of a Dairy Facility)

Potentially Significant Impact: The EIR identifies potentially significant impacts to Land Use (Residences ¼ Mile of a Dairy Facility) in that the Project would further reduce the distance between the existing dairy facility site and the existing rural residences situated within ¼ mile of this Project and conflict with Kings County General Plan Dairy Element Policy DE 3.1c. Detailed information and analysis regarding this significant potential impact is provided in the Draft EIR, Section 3.3 (Impact # 3.3.2).

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the Project which lessen the significant environmental effect to Land Use (Residences ¼ Mile of a Dairy Facility) identified in the EIR, but not to a level below significance; pursuant to CEQA Guidelines § 15093, the County has balanced the benefits of the Project against its unavoidable environmental risks and has determined that this impact is acceptable for the reasons stated in the Statement of Overriding Considerations below.

Facts in Support of Finding: Kings County General Plan Dairy Element Policy DE 3.1c states that, when nearby rural residences that are not associated with the dairy are within one-quarter ($\frac{1}{4}$) mile of a proposed expansion of an existing Dairy Facility, the new improvements of the Dairy Facility shall be located so that the existing separation shall not be reduced. The owner/operator initiated expansion activities at the Sozinho Dairy without first obtaining approval through the Site Plan Review (SPR) process and the expanded portion of the dairy facility reduced the separation distance to some of the residences within ¼ mile of the dairy. A primary concern associated with residential dwellings located near a dairy is dust and odors emitted from these facilities. Construction and operational activities of the Project will be governed by the Dairy Element and the SJVAPCD rules and regulations. With respect to control of dust and odors, the owner/operator is required to implement an Odor Management Plan (pages 49 and 50) and Fugitive Dust Emissions Control Plan (pages 105-110) contained in the Sozinho Dairy Technical Report (Appendix H). The owner/operator is also required to implement Mitigation Measure # 3.3.2, which requires installation and maintenance of a downwind windbreak/shelterbelt along the east and south boundary of the Project site, consisting of evergreen shrubs and trees that meet the USDA National Resources Conservation Service (NRCS) Windbreak/Shelterbelt Establishment Standard (380). As not all dairy facility dust is contained on site, a windbreak will encourage deposition of dust particles that transport odors and intercept and filter odors and dust particles already airborne. Installation of trees and shrubs thus will provide an additional layer of dust and odor control and will accomplish a higher level performance than is required by the Dairy Element. However, Mitigation Measure # 3.3.2 will not reduce air quality or greenhouse gas impacts to a less than significant level and air quality impacts associated with the Project remain significant. Therefore, the potential

significant impact to Land Use (Residences ¼ Mile of a Dairy Facility) will be mitigated, but not to a level less than significant. Despite the incorporation of all feasible mitigation measures, the Project's impact on Land Use (Residences ¼ Mile of a Dairy Facility) is considered significant and unavoidable, and a Statement of Overriding Considerations pursuant to CEQA Guidelines §15093 is required.

5.0 FINDINGS REGARDING CUMULATIVE SIGNIFICANT EFFECTS

CEQA requires a lead agency to evaluate the cumulative impacts of a proposed project (CEQA Guidelines §15130(a)). Cumulative impacts are those which are considered significant when viewed in connection with the impacts of other closely related past, present and reasonably foreseeable future projects (CEQA Guidelines §15355). Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time.

The findings below identify each of the cumulative significant environmental impacts, the mitigation measures adopted to substantially lessen or to avoid them, or the reasons proposed mitigation measures are infeasible due to specific economic, social or other considerations. The findings incorporate by reference the analysis of cumulative significant impacts contained in the EIR (See Chapter 5 of the Draft EIR).

The significant cumulative impacts related to Air Quality and Greenhouse Gas Emissions identified in the EIR cannot be avoided or substantially reduced to below significance even after the adoption of all feasible mitigation measures. As described in the Statement of Overriding Considerations below, therefore, the County has determined these unavoidable significant impacts are acceptable because of specific overriding considerations.

5.1 Air Quality (Air Quality Degradation)

Potentially Significant Impact: The EIR identifies a potentially significant cumulative impact to Air Quality (Air Quality Degradation) in that operation of the Project will contribute to the degradation of air quality in the SJVAPCD Air Basin. Detailed information and analysis regarding this significant potential impact is provided in the Draft EIR, Chapter 5 (Impact # 5.1).

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the Project which lessen the cumulative significant environmental effect to Air Quality (Air Quality Degradation) identified in the EIR, but not to a level below significance; therefore, pursuant to CEQA Guidelines § 15093, the County has balanced the benefits of the Project against its unavoidable environmental risks and has determined that this impact is acceptable for the reasons stated in the Statement of Overriding Considerations below.

Facts in Support of Finding: The types of development and geographic area analyzed for cumulative air quality impacts include existing and probable future dairy facilities in the San Joaquin Valley air basin. The air basin has geographic boundaries which encompass approximately 25,000 square miles of land, including portions of 8 counties. The air quality within the basin is affected by a wide range of human activities, including stationary sources of air emissions (e.g. industrial facilities and power plants), mobile sources (e.g., cars, trucks, and mobile equipment), biogenic or natural sources (e.g., methane emissions from decomposition of organic materials, including sewage), and by emissions generated by a wide range of agricultural activities, such as dairy operations and crop production. The basin has been designated as severe non-attainment status for PM₁₀ and ozone. Agricultural activities have been subject to air quality permits only since 2004. Consequently, only limited comprehensive information is available from either air quality control districts or counties on air emissions generated by agricultural activities. The CARB and SJVAPCD have developed emissions inventories for select air pollutants from some agricultural activities (e.g., land preparation, harvesting, and beef cattle feedlots). However, air emissions, inventories and site-specific monitoring data regarding relevant parameters (e.g., VOC, hydrogen sulfide, PM₁₀, and methane) for animal confinement facilities (including dairies) within the San Joaquin Valley air basin are not yet available. The lack of available quantitative data makes analysis of all cumulative sources of air emissions difficult if not infeasible. The primary thresholds of significance for cumulative air quality impacts are defined by Ambient Air Quality Standards which provide a basis for measurement of the attainment status of the air basin. These ambient standards do not define which sector or sources contribute to air pollution (or how much), but nevertheless act to trigger the significance classification of cumulative impacts. All sources (point or non-point, permitted and unpermitted) of air emissions for which the air basin is not in attainment (e.g., PM₁₀ and ozone precursors) contribute to the nonattainment condition. Lacking other specific data, a projection of cumulative impacts from dairy development in the San Joaquin Valley was made based on dairy cow existing inventories and on lists of dairy use permits issued or pending but not constructed. Table 5.1-1 in Chapter 5 of the Draft EIR describes current and projected milk cow/dairy population in the 8-county area. Sulfide and odor emissions, while not quantifiable, must be assumed to be cumulatively significant. It should be noted that the figures considered in the EIR represent gross estimates which assume that all dairies have similar feed programs and design features and generate employee and truck trips of similar frequency and length. The number of milk cows on three dairies recently environmentally evaluated in Tulare County (Etcheagaray, El Monte and Bosman) is 13,200 and the projected truck trips for these three projects is 24. Assuming that each truck trip involves 20 miles of travel, the annual emissions associated with the incremental daily trips generated by all San Joaquin Valley dairies was calculated using the URBEMIS-7G program and are shown in Table 5.1-3 of the EIR. Adding vehicle emissions to those estimated as emanating from the cumulative

number of dairy cows (animal units), the total estimated cumulative emissions would be as shown in Table 5.1-4 of the EIR. Major contributing sources of PM₁₀ emissions in the air basin (in descending order of contribution) are entrained roadway dust, farming operations, waste burning, and industrial processes. The main sources of NO_x and VOC emissions are vehicle and other mobile sources, solvent use, farming, petroleum storage and transfer, and waste burning. The primary source of particulate matter on dairies is fugitive dust sources which are released from ground level, are not thermally buoyant, and therefore are expected to decrease with distance. The SJVAPCD, in implementation of SB 700, has adopted various regulations, including Best Available Control Technologies (BACTs) Conservation Management Practices (CMPs), which have as their objective the reduction of cumulative air quality impacts from agricultural operations, including dairies. The early actions recommended by CalEPA and CARB focus on transportation reductions and improving methane capture from landfills. While much research and development has been mandated, there are no viable alternatives currently available to further mitigate cumulative air quality impacts. Therefore, the Project is considered to contribute to a cumulative significant impact on Air Quality (Air Quality Degradation) in the SJVAPCD Air Basin. The potential significant impact to Air Quality (Air Quality Degradation) will be mitigated, but not to a level less than significant, by the owner/applicant's implementing the following mitigation measures. The Project shall incorporate multiple "Best Available Control Technologies" and best management practices to control dairy emissions (see EIR, Appendix H, p. 271). The owner/operator will be required to implement these strategies as needed to meet the SJVAPCD Authority to Construct and Permit to Operate conditions. The owner/operator also will implement Mitigation Measure #5.1, which provides as follows:

1. The applicant/owner shall, as part of the required Continuous Evaluation Program (Dairy Element Policy DE 6.3a), conduct an annual evaluation to demonstrate that the dairy is operating in compliance with the air quality mitigation measures set forth in Section 3.1 Air Quality and Section 3.2 Greenhouse Gases; and
2. The owner/operator shall comply with all feasible pertinent requirements of the SJVAPCD including BACTs and CMPs (EIR, Appendices C and D).

Implementation of these mitigation measures will reduce but not eliminate the significant cumulative impact on Air Quality (Air Quality Degradation), and the impact will remain significant. Therefore, despite the incorporation of all feasible mitigation measures, the Project's cumulative impact on Air Quality (Air Quality Degradation) is considered significant and unavoidable, and a Statement of Overriding Considerations pursuant to CEQA Guidelines §15093 is required.

5.2 Air Quality (Operational Emission of Nitrogen Oxide (NOx))

Potentially Significant Impact: The EIR identifies a potentially significant cumulative impact to Air Quality (Operational Emission of Nitrogen Oxide (NOx)) in that, although its project-related NOx emissions are less than significant, the Project's incremental contribution to NOx emissions is cumulatively significant because NOx is an ozone precursor and the SJVAPCD Air Basin is in non-attainment for both Federal and State ozone standards. Detailed information and analysis regarding this significant potential impact is provided in the Draft EIR, Section 3.1 (Impact # 3.1.6).

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the Project which lessen the significant cumulative environmental effect to Air Quality (Operational Emission of Nitrogen Oxide (NOx)) identified in the EIR, but not to a level below significance; therefore, pursuant to CEQA Guidelines § 15093, the County has balanced the benefits of the Project against its unavoidable environmental risks and has determined that this impact is acceptable for the reasons stated in the Statement of Overriding Considerations below.

Facts in Support of Finding: Existing project-related sources of NOx emissions including farm/dairy equipment, employee truck trips, and vehicle exhausts generate 4.6 tons per year of NOx emissions. The Project's NOx emissions would be 8.9 tons per year. The net increase of the Project in NOx emissions is 4.3 tons per year, well below the SJVAPCD significance threshold. Although the Project's NOx emissions are less than significant, the SJVAPCD Air Basin is in non-attainment for both Federal and State ozone standards and NOx is an ozone precursor. As a result, the Project's NOx emissions are considered cumulatively significant. All existing stationary equipment must now comply with SJVUAPCD Rule No. 2201 if modified or replaced. Mitigation measures to further reduce NOx are recommended because of the non-attainment status of the SJVAB. The potential significant cumulative impact to Air Quality (Operational Emission of Nitrogen Oxide (NOx)) will be mitigated, but not to a level less than significant, by the Project Applicant's implementing the following mitigation measure, which is identified in the EIR as Mitigation Measure 3.1.6:

1. The idling time of all equipment used at the site shall not exceed five minutes;
2. As much as possible, alternative fueled or catalyst-equipped diesel construction equipment shall be used at the dairy site;
3. Electrically driven equivalents to fossil-fueled equipment shall be utilized when available provided they are not run via a portable generator; and
4. Employees will be encouraged to carpool-travel to and from the dairy site.

Implementation of these mitigation measures will reduce but not eliminate the

significant cumulative impact on Air Quality (Operational Emission of Nitrogen Oxide (NOx)), and the impact will remain significant. Therefore, despite the incorporation of all feasible mitigation measures, the Project's cumulative impact on Air Quality (Operational Emission of Nitrogen Oxide (NOx)) is considered significant and unavoidable, and a Statement of Overriding Considerations pursuant to CEQA Guidelines §15093 is required.

5.3 Greenhouse Gas Emissions

Potentially Significant Impact: The EIR identifies a potentially significant cumulative impact to Greenhouse Gas Emissions in that Project's greenhouse gas emissions would contribute to global climate change. Detailed information and analysis regarding this significant cumulative impact is provided in the Draft EIR, Chapter 5 (Impact # 5.2).

Finding: Pursuant to CEQA Guidelines §15091(a)(1), changes or alterations have been required or incorporated in the Project which lessen the significant cumulative impact related to Greenhouse Gas Emissions identified in the EIR, but not to a level below significance; pursuant to CEQA Guidelines §15091(a)(3), specific economic considerations make infeasible two of the mitigation measures identified in the EIR; pursuant to CEQA Guidelines § 15093, the County has balanced the benefits of the Project against its unavoidable environmental risks and has determined that this impact is acceptable for the reasons stated in the Statement of Overriding Considerations below.

Facts in Support of Finding: Greenhouse gas emissions (GHG) are believed to contribute to global climate change (GCC). The reports discussed in the EIR indicate GCC could result in poor air quality, more severe heat; increased wildfires; shifting vegetation; declining forest productivity; decreased spring snow pack; water shortages; a potential reduction in hydropower; a loss in winter recreation; agricultural damages from heat, pests, pathogens, and weeds; and rising sea levels resulting in shrinking beaches and increased coastal floods in California. Potential health effects from GCC also may arise from temperature increases, climate-sensitive diseases, extreme events, and air quality. GCC-related meteorological changes and sea level rises are expected to lead to other adverse impacts, such as flooding and hurricanes which can displace people and damage property and agriculture, drought and decreased snow pack which would decrease water and food availability, rising sea levels which would increase stress on levees and exacerbate storm wave run-up and coastal erosion, and air quality problems from increased frequency of smog and particulate air pollution. There are no widely accepted thresholds of significance for determining the impact of GHG emissions. At this time, neither Kings County, the SJVAPCD, nor any State agency, such as the California Air Resources Board, has adopted specific thresholds for GHG emissions for dairy projects. Therefore, the EIR determined that the Project would have a significant impact if it would impede, interfere with or fail to comply with the goals and objectives of

AB 32 or related Executive Orders intended to reduce GHG emissions in California. Under such a threshold, the Project's GHG emissions and resulting climate change impacts are considered cumulatively significant. The cumulative significant impacts relating to Greenhouse Gas Emissions can be mitigated, but not to a level below significance, by the owner/operator's implementation of the following measures, which are identified in the EIR as Mitigation Measure #5.2:

1. Convert the milking barn facilities to be energy efficient with respect to space heating/cooling and building insulation, install energy efficient heating/cooling equipment there, and use fluorescent and/or LED lighting throughout the facility;
2. Maintain an impervious covering on silage and manure piles year-round;
3. Include dietary aids (e.g., cottonseed) in feed rations;
4. Incorporate solid manure into fields within two hours after application;
5. Feed according to National Research Council (NRC) guidelines;
6. Remove feed at least once every 14 days from areas where animals stand to eat;
7. Feed or dispose of rations within 48 hours of grinding and mixing;
8. Store grain in a weatherproof storage structure from October through May;
9. Cover horizontal surfaces of silage piles, except areas where feed is being removed;
10. Flush or hose the milk parlor immediately prior to, immediately after, or during each milking;
11. Flush freestalls more frequently than the milking schedule;
12. Inspect water pipes and troughs and repair leaks at least once every 14 days;
13. Clean corrals at least once between April and July and at least once between October and December;
14. Manage corrals such that animal waste depth in corrals does not exceed 12 inches, except for in-corral mounding;
15. Maintain surfaces of corrals and dry lots so that puddles do not form and remain more than 48 hours;

16. Harrow, rake, or scrap pens sufficiently to maintain a dry surface;
17. Install corral shade structures uphill of any slope;
18. Do not allow liquid animal waste to stand in the field more than 24 hours after irrigation;
19. Apply no solid animal waste with a moisture content of 50% or more;
20. Remove animal waste from the dairy facility within seventy-two (72) hours of removal from the pens or corrals;
21. Cover dry animal waste piles outside the pens with a weatherproof covering from October through May, except for times, not to exceed 24 hours per event, when wind events remove the covering;
22. Remove solids from the waste system with a solid separator system prior to the waste entering the lagoon;
23. Choose, to the extent feasible and practical, recycled, low-carbon and otherwise climate-friendly building materials such as salvaged and recycled-content materials for buildings, hard surfaces and non-plant landscaping; and
24. Minimize, reuse and recycle construction-related waste.

In addition to the mitigation measures described above, the EIR evaluated two other suggested mitigation measures, biofilters and digesters. Based on the information set forth in the EIR, the County hereby determines that biofilters and digesters are infeasible as mitigation measures for the cumulative impacts relating to Greenhouse Gas Emissions for the following reasons:

1. Dairy Cow Housing (Vented Enclosures with Biofilters)

Enclosed structures, with exhaust vented to a biofilters, have been shown to be an effective method of controlling VOC emissions for other operations (painting, coating, printing operations, etc.). Biofilters are widely used in the swine industry for controlling VOC emissions; however, no data has been identified regarding the effectiveness of biofilters to control CH₄ emissions. Furthermore, this technology has not yet been verified to work with enclosed dairy housing structures. Specifically, it is unclear whether biofilters would work with the high air flows required in enclosed dairy freestall housing structures. California has high ambient temperatures, and enclosed housing systems typically require air condition for the majority of the year. As a result, heat stress is a primary concern with using enclosed housing systems on California dairies if the enclosed housing systems are not air cooled. Consequently, enclosed housing systems are not used in Kings County dairies. Theoretically, even if vented

enclosures were to be used, adequate artificial ventilation and air conditioning would be required. The amount of ventilation and air conditioning would be dependent upon the design of the housing facility, climate number of animals, and other variables. While systems may vary, enclosed housing structures in the San Joaquin Valley back-up system might be required to prevent extreme heat stress and poor air quality in the case of a power failure. The large energy requirement needed to cool the enclosed structure would result in an increase in GHG emissions from indirect electricity use. These emissions might offset the GHG reductions achieved due to the enclosed structure and biofilter. The capital and operating costs for such housing and biofiltration for dairy cows in the San Joaquin Valley have been estimated by the San Joaquin Valley Air Pollution Control District as a potential VOC reduction measure for a 3,500 milk cow dairy. The capital cost for the biofilters alone, not including housing or duct work, was estimated to be \$11,371,486. The resulting cost of VOC emission reductions was estimated to range from \$67,584 to \$86,548 per ton, far in excess of the District's BACT standard of \$17,500 per ton. Annual operating costs were estimated to be \$1,635,363 to \$1,850,657 per year. Therefore, the costs of this mitigation measure are considered economically infeasible for the Project.

2. Digesters

Appendix E of the EIR provides an evaluation of the economic and technical feasibility of digester technologies, including flaring, gas pipeline injection for off-site gas sales, and on-site energy production for on-site use or off-site sale, with respect to GHG emission reductions. Fuel cells have not yet been adequately demonstrated to be achieved in practice for dairies and are costly to operate, especially if there is no practical use for all of the energy generated by the fuel cells. Microturbines have been demonstrated to be unreliable and costly. Flares are not cost effective because no useable energy can be generated from the flaring of biogas to offset the capital and maintenance costs. Internal combustion engines result in an increase in criteria pollutant emissions requiring the installation of unreliable and costly pollution control devices (see Appendix E for an analysis of the feasibility of a digester for a new dairy). Although anaerobic digesters are operating with internal combustion engines on various California dairies, the majority of digesters are not subject to the stricter NO_x emission limit of 9 ppm. Although it is understood that there are currently a few permit applications for dairies equipped with anaerobic digester, only one dairy, Joseph Gallo Farms, is currently operating an anaerobic digester subject to a NO_x emission limit of 9 ppm. The anaerobic digester at the Joseph Gallo Farms is equipped with a H₂S scrubber and a selective catalytic reduction (SCR) system to control emissions from the digester engine. Injection of treated biogas into a natural gas transmission line in the vicinity of the subject dairy may become feasible once a cluster of dairies comes online. The project applicant has indicated that joining a cluster of dairies to inject treated biogas into a local gas transmission line will be considered at a later date. In June 2008, CARB released a draft version of the AB32 Scoping Plan, in which CARB staff found

that the installation of manure digesters for the purposes of generating emission reductions should be voluntary for the next five years and it will subsequently determine if manure digesters should be made mandatory in 2020. Furthermore, according to the California Climate Action Registry (CCAR), no regulations in the U.S. have been identified that obligate livestock owners to invest in a digester system. Therefore, this mitigation measure is considered technically and economically infeasible for the Project.

Implementation of the feasible mitigation measures identified in the EIR will reduce but not eliminate the significant cumulative impacts relating to Greenhouse Gas Emissions and the impacts will remain significant. Therefore, despite the incorporation of all feasible mitigation measures, the Project's cumulative impacts relating to Greenhouse Gas Emissions are considered significant and unavoidable, and a Statement of Overriding Considerations pursuant to CEQA Guidelines §15093 is required.

6.0 FINDINGS REGARDING PROJECT ALTERNATIVES

In preparing and adopting findings, a lead agency need not necessarily address the feasibility of both mitigation measures and environmentally superior alternatives when contemplating the approval of a project with significant environmental impacts. Where the significant impacts can be mitigated to a level of insignificance solely by the adoption of mitigation measures, the lead agency has no obligation in drafting its findings to consider the feasibility of environmentally superior alternatives, even if their impacts would be less severe than those of the project as mitigated. Accordingly, in adopting the findings concerning alternatives for the proposed project, the County considers only those significant environmental impacts that cannot be avoided or substantially lessened through mitigation.

Where a project will result in some unavoidable significant environmental impacts even after application of all feasible mitigation measures identified in an EIR, the lead agency must evaluate the project alternatives identified in the EIR. Under such circumstances, the lead agency must consider the feasibility of alternatives to the project which could avoid or substantially lessen the unavoidable significant environmental impacts. "Feasible" means capable of being accomplished in a successful manner within a reasonable time, taking into account economic, environmental, legal, social and technological factors (CEQA Guidelines §15364).

If there are no feasible project alternatives, the lead agency must adopt a Statement of Overriding Considerations with regard to the project pursuant to CEQA Guidelines §15093. If there is a feasible alternative to the project, the lead agency must decide whether it is environmentally superior to the proposed project. The lead agency must consider in detail only those alternatives which could feasibly attain most of the basic objectives of the project; however, the lead

agency must consider alternatives capable of eliminating significant environmental impacts even if these alternatives would impede to some degree the attainment of project objectives (CEQA Guidelines §15126.6(f)).

These findings contrast and compare the alternatives where appropriate in order to demonstrate that the selection of the Project has substantial environmental, planning, fiscal and other benefits. In rejecting certain alternatives, the County has examined the Project's objective and weighed the ability of the various alternatives to meet the objectives. The County believes the Project best meets this objective with the least environmental impact. The overall objective of the Project is to expand and operate an economically viable and competitive dairy facility in compliance with applicable laws and regulations, optimally utilizing the available land resource, and mitigating any environmental impacts to the extent feasible and as required by CEQA. The objective considered by the County is set forth in Section 1.3 above and in the Draft EIR, Section 2.2 (Project Objective).

The EIR examined a reasonable range of alternatives to determine whether they could meet the Project's objectives while avoiding or substantially lessening one or more of the Project's unavoidable significant impacts. These findings also considered the feasibility of each alternative. In determining the feasibility of alternatives, the County considered whether the alternatives could be accomplished in a successful manner within a reasonable period of time in light of economic, environmental, social and technological factors (CEQA Guidelines §§ 15126(d)(5)(A), 15364).

The EIR concluded that the Project will result in unavoidable significant project-related impacts on Air Quality and Land Use, and unavoidable significant cumulative impacts on Air Quality and Greenhouse Gas Emissions, even after the adoption of all feasible mitigation. Accordingly, the EIR analyzed two alternatives to the Project: the No Project Alternative and the Reduced Herd Size Alternative. Detailed information and analysis concerning these alternatives are set forth in the Draft EIR, Chapter 4 (Alternatives). The following section of these findings summarizes these alternatives and the feasibility of the alternatives as a means to reduce or avoid the unavoidable significant impacts associated with the Project.

6.1 No Project Alternative

The No Project Alternative is an alternative which is required to be evaluated by CEQA (CEQA Guidelines § 15126(d)(2)). The No Project Alternative assumes that the Project will not be implemented and that existing land uses on the project site will remain unchanged and in their existing condition. The No Project Alternative serves as the alternative against which to evaluate the effects of the Project and other project alternatives.

Under the No Project Alternative, the existing dairy facilities would not be expanded. No new development or alterations would be implemented and the project applicant could be required to restore the project site to its previous condition. The No Project Alternative would not achieve the basic Project objective, although there would be no increase in dairy-related air quality, health risks, and greenhouse gases and water quality and land use impacts would be reduced. However, impacts associated with contamination of row-crop or other agriculture would continue.

The County finds that the No Project Alternative would not achieve the Project's objective and would preclude obtaining the benefits of the Project. The County finds that all potential significant environmental impacts of the Project will be mitigated by the design of the Project and the adoption of the mitigation measures set forth in the Mitigation Monitoring and Reporting Program, except the Project's significant project-related and cumulative impacts associated with Air Quality, Greenhouse Gas Emissions and Land Use. The County further finds that, although the No Project Alternative would avoid or substantially lessen the significant potential impacts in the project area, the No Project alternative is infeasible because it would not attain the project objective and would not provide the County with any of the benefits of the Project described above and in the Statement of Overriding Considerations, and thus would be undesirable from a policy standpoint. For the potential significant impacts which cannot be avoided or mitigated to a level below significance, therefore, the County adopts the Statement of Overriding Considerations below pursuant to CEQA Guidelines §15093.

6.2 Reduced Project Alternative

The Reduced Project Alternative considered an alternative herd size of 1,366 milk cows and support stock totaling 2,364, which is approximately 60 percent of the proposed project increase and is representative of other dairy operations in Kings County. With this reduced herd size, the amount of acreage needed for liquid and solid manure utilization will be decreased. This alternative was selected for analysis because a reduction in the herd size and corresponding dairy facilities would result in roughly proportional reductions in air quality and health risks, although not to a less than significant level. This alternative would also decrease greenhouse gas emissions, lower the potential for groundwater degradation, and eliminate some of the land use violations.

The potential impacts of the Reduced Herd Size Alternative are discussed in detail in Chapter 4, Section 4.2 of the Draft EIR. The Reduced Herd Size Alternative would lessen significant project-related impacts on Air Quality in that it would proportionately reduce NOx and ammonia emissions; however, VOC and PM₁₀/PM_{2.5} emissions remain above SJVAPCD thresholds. With respect to Greenhouse Gas Emissions, there would be a proportional reduction in methane (CH₄) under the Reduced Herd Size Alternative, but carbon dioxide (CO₂)

associated with continued field crop production activities would have emissions similar to the Project. The Reduced Herd Size Alternative would lessen significant impacts on Land Use in that it could allow an expansion that would conform to Kings County Dairy Element policies; however, Land Use impacts related to Separation of Dairy Facilities by 1/4 Mile and Residences Within 1/4 Mile of a Dairy would require a CUP and an EIR.

The Reduced Herd Size Alternative would partially achieve the Project objective stated in Section 2.2 of the EIR. However, the Reduced Herd Size Alternative would not fully achieve the fundamental objective of the Project since the Reduced Herd Size Alternative would not optimally utilize the available land resources.

The County finds that all potential significant environmental impacts of the Project will be mitigated by the design of the Project and the adoption of the mitigation measures set forth in the Mitigation Monitoring and Reporting Program, except the Project's project-related and cumulative significant impacts on Air Quality, Greenhouse Gas Emissions and Land Use. The County further finds that, although the Reduced Herd Size Alternative would proportionately reduce the significant impacts on Air Quality and Greenhouse Gas Emissions, the Reduced Herd Size Alternative is infeasible because it would not fully attain the fundamental objective of the Project and would not provide the County with all of the benefits of the Project described above and in the Statement of Overriding Considerations, and thus would be undesirable from a policy standpoint. For the potential significant impacts which cannot be avoided or mitigated to a level below significance, therefore, the County adopts the Statement of Overriding Considerations below pursuant to CEQA Guidelines §15093.

7.0 STATEMENT OF OVERRIDING CONSIDERATIONS

The Project would have significant unavoidable environmental impacts on the following areas, which are described in detail in the Draft EIR, Section 3.1 (Air Quality), Section 3.2 (Greenhouse Gas Emissions), Section 3.3 (Land Use) and Chapter 5 (Cumulative Impacts):

- Project-related impacts on Air Quality and Land Use; and
- Cumulative impacts on Air Quality and Greenhouse Gas Emissions.

The County has adopted all feasible mitigation measures with respect to the significant unavoidable environmental impacts. The County also has analyzed a reasonable range of alternatives to the Project, including the No Project Alternative and the Reduced Herd Size Alternative. Based on the evidence contained in the EIR and presented during the administrative proceedings, the

County has determined that none of the alternatives meets the fundamental objective of the Project and is feasible and environmentally preferable to the Project as approved.

Pursuant to CEQA Guidelines §§ 15043 and 15093, therefore, the County must adopt a “Statement of Overriding Considerations” in order to approve the Project. A Statement of Overriding Considerations allows a lead agency to determine that specific economic, social or other expected benefits of a proposed project outweigh its potential significant unavoidable environmental risks. Although the County has no obligation under CEQA to adopt a Statement of Overriding Considerations for significant impacts which will be mitigated to a level below significance, the County wishes to make clear its view that the benefits of the Project described below are of such importance to the community as to outweigh all significant adverse impacts described in the Final EIR or suggested by participants in the public review process.

Pursuant to CEQA Guidelines §15093, the County hereby finds that the Project would have the following benefits:

- The Project will ensure that 428 acres of farmland remain in agricultural production, with 368 acres in field crops and 60 acres in dairy production facilities.
- The Project will increase employment opportunities within the region by providing approximately 12 year-round, permanent jobs during operation of the Project.
- The Project will provide a benefit to the community by increasing milk production and increasing the growth of high value crops in the Project area. Milk has been a leading farm commodity in Kings County in recent years. According to the Kings County Agricultural Commissioner, the value of milk production in 2010 was \$556 million, ranking the County as the number three dairy county in the State. Increasing the importance of dairy farming in Kings County is the value of directly-related high-value crops grown in the county such as alfalfa (\$67 million), corn and silage (\$51 million), and wheat (\$35 million).
- The Project will increase the production of milk and cream in the county at an existing family owned dairy operation. In California, agriculture is a \$36.6 billion industry (2007) and growing each year (California Agricultural Resource Director 2008-09). Though some agricultural operations are very large, less than 1% of the State’s 75,000 farms and ranches are run by non-family corporations (American Farmland Trust). Milk and cream are the number one commodities in the State, generating \$7.33 billion in 2007.

- The Project will expand an existing family owned dairy operation, which would maintain existing jobs and create new jobs. A study prepared by the California Milk Advisory Board in 2010 described the dairy industry's impact on California's economy, including the number of jobs and revenue generated from a typical dairy farm in one year. In 2008, the latest year for which figures are available, California's largest agricultural commodity was responsible for creating a total of 443,574 jobs and \$63 billion in economic activity for the state. (California Milk Advisory Board, February, 2010).
- The Project will result in construction-related jobs. As an example of the value of dairies, the Ohio State University Department of Animal Sciences has prepared a report on the economic impact of a new dairy with 2,500 cows (Throan et.al.). The monies spent during the construction phase totaled \$8.6 million (includes \$5 million spent for construction and \$3.6 million additional stimulation in local economy) and resulted in 102 construction-related jobs. In operating the new 2,500-cow dairy the annual economic impact was estimated to total \$13.5 million (including \$7.6 million annual sales, \$4.3 million direct sales to the dairy and \$1.6 million in household spending).

Although it cannot mitigate the unavoidable environmental impacts to a level below significance, the Project incorporates design features and will implement mitigation measures intended to minimize to the extent feasible the potential impacts to Air Quality, Greenhouse Gas Emissions and Land Use generated by the Project.

The County has weighed the benefits of the Project against its potential significant unavoidable environmental risks in determining whether to approve the Project. After balancing the specific economic, legal, social, technological, and other benefits of the Project, the Planning Commission has determined that the unavoidable, significant environmental impacts of the Project are considered "acceptable" because the specific considerations identified above outweigh the significant unavoidable environmental impacts of the Project. Each of the benefits and the fulfillment of the objective of the Project, as stated herein, are determined to be a separate and independent basis for overriding the unavoidable significant environmental impacts identified above. For the foregoing reasons, therefore, the County finds that the Project's potential significant unavoidable environmental impacts are outweighed by the benefits described above.

Table ES-1 (*Corrected*)
Summary of Potentially Significant Impacts and Mitigation Measures
Mitigation Monitoring and Reporting Program

Impact No.	Impact	Page Number in EIR	Mitigation Number	Mitigation Measure	Level of Significance After Mitigation	Monitoring Agency
AIR QUALITY						
3.1.1	Toxic Air Emissions Health Risk	3-29 to 3-31	3.1.1	<p>The owner/applicant shall implement the following measures:</p> <ul style="list-style-type: none"> ▪ Cattle Housing Dust (PM_{2.5}) <ol style="list-style-type: none"> 1. Paved feedlanes, where present shall be a width of at least 8 feet along the corral side of the feedlane fence for milk and dry cows and at least 6 feet along the corral side of the feedlane for heifers; and 2. Scrape, vacuum, or flush concrete lanes in corrals at least once every day for mature cows and every 7 days for support stock. ▪ Dairy Equipment and Truck Exhaust Emissions - Nitrogen Oxide (NO_x) <ol style="list-style-type: none"> 1. The idling time of all equipment used at the site shall not exceed five minutes; 2. As much as possible, alternative fueled or catalyst-equipped diesel equipment shall be used at the dairy site; 3.
